[\[FULL TUT\]??HC Stealer Better Than iStealer??Undetectable PHP|NEVER SEEN BEFORE|??](#)

This is my second spreading tutorial in which I will show you how to get 150+ slaves per day. I have seen few tutorial in this forum but now I will show you in detail which never seen before in this forum. In this method which I am going to show you is very effective and you can accumulate 150+ (approximately) Installs Everyday. Yes I am telling again 150+ Installs Everyday.

So Let's Start!!!

What will you need to do?

Program That You Bind Your FUD Server

Make Your Sever FUD

Binder (iExpress)

Resource Hacker

uTorrent

Little Brain

Now I am going to show my second tutorial in the hackforums.

Step No. 01

Program That You Bind Your FUD Server

First of all, find software / program which is top rated in torrent sites that people are really wanted like Cracks, Keygen etc. These are good examples because these programs are in high demand by the people.

But how to findout these programs?

#.org is very popular torrent site and you can find which software is being most downloaded. You can visit the website and check the top rated application / software but try to make sure that the application / program are small in size.

Step No. 02

Make Your Sever FUD

First of all create server of your RAT / Keylogger and then make your server FUD because of to avoid AV's detections. I will suggest you to use private version of crypter. Anyways you can also use free version of crypter.

Here is the link of free version of crypters.

Spoiler [\[Click to View\]](https://hackforums.net/forumdisplay.php?fid=126)<https://hackforums.net/forumdisplay.php?fid=126>

Step No. 03

Binder (iExpress)

I hope there are many binders in this forum (because of I never searched in this forum as I am new here that's why I hope) but I will suggest to use iExpress which is integrated in OS.
So lets start!!

Press start menu and then hit run button.

Type iexpress and then hit enter.

Now you will see the iExpress Wizard as shown in figure.

Spoiler [\[Click to View\]](#)

Note: I am not posting more pictures of the tutorial because hackforums did not allow me more than 15 pictures, so when necessary I will post the pictures. For Now just follow my commands.

Press Next in Welcome to IExpress 2.0 as shown in above picture.

In Package Purpose check Extract files and run an installation command then click next.

In Package title press space 2-3 times as I shown in below

Spoiler [\[Click to View\]](#)

In Confirmation prompt check No prompt. and then press next.

In License agreement check Do not display a license and then press next.

Now It is the time to BIND your Program and your FUD Server. First press add button and locate your program and as well as your crypted server as shown in below.

Spoiler [\[Click to View\]](#)

Now press next.

In Install Program to Launch You will see the option i.e Install Program,

Select your crypted server.exe here and in below there is option says Post Install Command, select you program which you downloaded from #.org (I downloaded the Photoshop Crack) and press next as shown in below.

Spoiler [\[Click to View\]](#)

In Show window check Hidden and press next.

In Finished message check No message and then hit the next button.

Now It's time where you need to save you new BINDED file and what you want to call it. I am saving this as Photoshop Crack in my desktop and press check the Hide File Extracting Progress Animation from User. Press next as shown in below.

Spoiler [\(Click to View\)](#)

In Configure restart, check No restart and press next.

In Save Self Extraction Directive, check Don't save and then press next.

In Create package, press next.

Now press Finish.

Step No. 04 Resource Hacker

You will be disguising your new file which is a combination of the program you downloaded from the #.org and your server by changing the icon and name of it.
So here is the link of Resource Hacker

Spoiler [\(Click to View\)](#)<http://delphi.icm.edu.pl/ftp/tools/ResHack.zip>

Now open you reshack.exe by double click and go to file > open (the original software which you downloaded from #.org). Now press +sign Version Info which is located on the left side or double click on it. Then press +sign again then you will see a yellow flower icon in the name of 1047 or whatever. Press that icon then you will see the Version Info located on the right side of Resource Hacker. Right click and press select all then copy as shown in picture below.

Spoiler [\(Click to View\)](#)

Now open your new BINDED FILE which you created in iExpress and repeat the same procedure as above we do and paste it. Now click on compile script which is located on the top of the screen of the Resource Hacker then click action and then replace icon. Then suddenly you will see a new box appear. Now click open file with new icon and then find the software which you have downloaded from #.org and then open it in Resource Hacker. Once it opened you should return to the previous box in which you will click replace. Now go back to the main screen and save it.

Note: Make sure when you are saving, give the same name as the original download file and when you have the final file with the different name, then the icon should be the same as the downloaded file.

Step No. 04 uTorrent

Now it is the time to upload your virus and spread it. So download the uTorrent software from uTorrent site. Once you have downloaded and then install it on computer.

Now open your uTorrent application and go File > Create New Torrent. You will see the new windows popup. Press Add File then locate you new BINDED FILE.

In Tracker box you will find 3-4 tracker list already just delete all of them and copy paste these tracker lists as show in below codes.

Then Save it.

Now the question is where we upload the torrent file?

These are the top rated torrent sites.

#.org

btjunkie.org

torrentreactor.to

mininova.org

fulldls.com

seedpeer.com

bitenova.nl

toreentportal.com

torrents.sumotorrent.com

fenopy.com

torrentmatrix.com

torrentdownloads.net

Once your new BINDED FILE upload to the above site. You should leave the uTorrent as long as you can because the people are downloading your new BINDED FILE.

TIPS OF THE DAY

How to get more and more slave?

Upload your torrent file to these torrent sites first

fulldls.com
torrents.sumotorrent.com
betenova.com
seedpeer.com
btjunkie.org

Wait until you have 05 seeds and 20 peers. Then you should upload the torrent file on these sites

torrentreactor.to
torrentportal.com

Wait until you have 10 seeds and 30 peers. Then you should upload the torrent file on these sites

torrentdownloads.net
torrentmatrix.com

Wait until you have 20 seeds and 40 peers. The you should upload the torrent file on these sites

torrentbox.com
mininova.org

After then wait for couple of hours i.e 10-12 hours then finally upload your torrent file on #.org

Hahahaha Honey you are so funny patton319. I like that...

You should download cracks / keygens of Photoshop, Acrobat, AV's etc because these program are in highly demand by the people. You can also use fake program like MSN Password Stealer or something like that but when you are using fake programs, I will suggest to you to don't forget use to fake error message which is built-in in some RAT or while crypting your server.

Have a nice day and please give me your feedback after you will get the slaves. ??

ok it doesnt mean anything ithink. You must upload the torrent to individual site. Then seed one by one for individual tracker. By putting all the trackers in one torrent doesnt mean it will upload on all trackers automatically. You must index your torrent by uploading to each site.

Good tutorial,is not really new but very detailed and very understandable! Keep going and some notice:

To all of your blackhat threads add a Discaimer : "You'r not responsable for any action...blah blah"
-you could also include warez sites but i think is another topic,btw
-a free crypter can really ruin your install-rate ! many many reasons..
Another note, for guys who use BlackShades,they can use the rat once they got more installs to seed with them silently ;) VERY HELPFUL!
