Thread: [\[Guide\] Being ddosed? Read this guide to stop that! \[Guide\]](#)

Sachaownz - July 23, 2011, 12:53 am

Well as the title says i'm going to try to give you people some solutions to make sure the ddoses will stop.

Solution 1 : Install D-Guard program and follow the installation guide. You can download it by clicking [HERE](#).

Note : this solution is a beta-version so it might stop some ddos attacks but it won't stop the big attacks like 1000 bots+ or something like that.

Solution 2 : Ask your ISP for a new dynamic/static ip. I don't know how this go with most of the people, but i have to call my ISP first to ask if they could change my dynamic/static IP. Sometimes unplugging your router for 30 seconds and plugging it back in changes your dynamic ip. So you can try this first.

Solution 3 : I found a thread made by Tuna which could work for some of you. All credits go to Tuna of course. Here it is : <https://hackforums.net/showthread.php?tid=1505730>

Solution 4 : DDos protected VPS to work on. There are cheap VPSes. But most of them cost around 80-300\$ depending on ddos protection level. Some examples : <http://www.rivalhost.com/ddos-protected-vps.php>, <http://www.staminus.net/> (just google anti-DDos Protected VPS)

Important :

- Always keep your firewall software and windows up-to-date. This is good for your protection.
- Never give your IP adress to anyone. Most of the time they can search your ip adress with programs so i also suggest you use a VPN or Proxy to surf on the internet or while gaming.
- If these things don't work for you i suggest you buy some real protection but this stuff is expensive. You would have to buy a real firewall (non-software) and more of that.

Well, i guess this is it. If you have any further questions or if you require any further help i would like to help you guys, PM me. But remember the real white hat helpers can help you more i think. And sorry for my bad english but i'm Dutch so it is not that easy for me.

Greetz Sachaownz

Please some feedback to improve my guide

Oceanie - July 23, 2011, 12:59 am

This Is pretty good! Does having an "Gaming Router" help? o.o

Sachaownz - July 23, 2011, 1:00 am

Well i don't know what the difference between a gaming router and normal router is, perhaps you get better gaming results and it makes your internet push everything to the game. But i don't think it makes a difference. This is just to improve performance.

xZ3lLx - July 23, 2011, 2:40 am

give me your ip ill show you how well this works

Hecker21 - July 23, 2011, 2:41 am

" You can download it by clicking HERE. "

I CLICKED HERE AND NOTHING HAPPENED!

Sachaownz - July 23, 2011, 2:41 am

Pretty cool, with ur -rep :)

Ludus - July 23, 2011, 3:12 am

It works but not very well, also xZ3lLx is pr0 h4ck3r don't mess with him. Plus a router is a router never heard of a "gaming router" and I'm pretty sure there's not such thing.

yeh i'm sorry but I'm just trying to help and he's like acting cool etc. i'm sorry for everything still. But i just want to help people :)

lolsonlols - July 23, 2011, 4:48 am

A gaming router is designed for gaming obviously and yes they are labeled as gaming routers. Also a software firewall won't really help against a DDoS. You're going to want a router with a built in hardware firewall.

Sachaownz - July 23, 2011, 5:01 am

Yeh that's what I wrote. non-Software firewall. So yes Hardware. :D

Still thx for comment + I didn't even know a game router existed

Just a little tip if you are using a dynamic IP some routers will automatically renew one when connection is lost, So if you unplug your router for 30 seconds and plug it back you should automatically auto renew with a new dynamic.

Sachaownz - July 23, 2011, 10:29 am

People please give some feedback? Cmon i want to improve this guide to make it one of the most helpfull guides made in this forum.

Thx in advance.

- Sachaownz

lolsonlols - July 23, 2011, 12:33 pm

anti-ddos protected would imply it's not DDoS Protected? why not just say DDoS protected?

Network. - July 23, 2011, 4:37 pm

Very nice guide.. helped me out alot. thank you.

alexander_ru - July 23, 2011, 6:47 pm

Very good initiative which will help a lot of people I think. Thanks for this guide.

Sachaownz - July 24, 2011, 1:17 am

Thank you very much everyone. I would love to find more solutions and tips so please post feedback/ideas or correct some statements if they are written wrong in the guide.

Greetz
