Thread: [I have been hacked but how???](#)

Thrillofit - July 24, 2011, 8:50 am

well this is what happend. I was in the hallroom on my way to the door and paam. my iphone started to play some porno sound withaxed volyum so i got paniced but lucky noone where at home and the other thing was that he could see me doing stuff with my front camera? im scared as hell. And it was my friend frie d who did it but he dont want 2 tell me so i asking u, how can i do stuff like that?

btw i have jailbroken iphone 4 4.3.3[/align]

Tacnayn - July 24, 2011, 8:53 am

Well it's jailbroken, that opens up a whole new world and become vulnerable to these things, he could've used exploits through Mobile Terminal or maybe a program through his computer, but I've never heard of someone hacking into their iPhone and do something like that!

Thrillofit - July 24, 2011, 9:02 am

Lucky i wasnt do "dirty stuff" haha. but is there any way i can do payback without crashing his iphone. he have iphone to and jailbroke.

AnthonyWasH3r3 - July 24, 2011, 9:11 am

How do you know he can see you in the front camera?
And has your friend have any access to your phone?

Thrillofit - July 24, 2011, 9:20 am

i dont know. i know my friend used my phone many times before. he told me he saw me

is there any way i can do a payback?

Spark! - July 24, 2011, 11:36 am

Is he jailbroken? And do you happen to have any apps called IP Camera, or something like that? And for the porn, he could have possibly opened up something through an SSH or Veency.

Thrillofit - July 24, 2011, 11:42 am

well i dont know. Is it easy to do it? yes he is jailbroken too

Pluto - July 24, 2011, 11:46 am

If your phone is jailbroken and he had access to it, there are plenty apps that you can install that spy on the persons iphone. I'd go and check sbsettings right now and see if there are any invisible apps. If you can get access to his phone, just download one on to his too.

Thrillofit - July 24, 2011, 12:22 pm

Well i cant see that. but imma about to restore it right now. could someone tell me how i can do payback then:/

D3xus - July 24, 2011, 1:11 pm

(Jul 24, 2011 12:22 PM)Thrillofit Wrote: [\[CITE\]](#) Well i cant see that. but imma about to restore it right now. could someone tell me how i can do payback then:/Jailbreak his iPod.
Install openssh.

Find his ip address.
Download winscp.
Set his ip as the host.
Username is root password is alpine.
Delete all files on his device.
He'll be left with a paperweight.

Thrillofit - July 24, 2011, 1:30 pm

Is there anyway to keylogg them ?

sorry for ask stupid question but as u see, im noob lol

AnthonyWasH3r3 - July 24, 2011, 1:42 pm

Look, if you are wondering what program he is using (assuming he really did get you) go do what a user suggested already. Check SBSettings, go to more, then click on mobile substrate addons. Post that list.

After that, go to Cydia -> manage -> packages.
See if there is anything suspicious there.

Thrillofit - July 24, 2011, 1:44 pm

hmm sorry cant tell cuz i have restored it already. but next time its his turn to get his iphone hacked, if i learn it somehow...

AnthonyWasH3r3 - July 24, 2011, 1:46 pm

I have an idea for a iphone rat I want to make. I just have to get the time to develop it. But not going to be soon at all so don't get your hopes up yet.

Thrillofit - July 24, 2011, 2:44 pm

Ah okey but i added u in msn! Maybe someone know how to do control to other iphonea:)?

Spark! - July 25, 2011, 12:42 pm

There is a keylogger for iDevices now. It came out a couple months ago. You could possibly moddify it to have it send the logs to an email.

Thrillofit - July 26, 2011, 7:50 am

Is that thing hard to do it ?

Spark! - July 26, 2011, 10:41 am

I really don't know. I haven't played with it at all.

Thrillofit - July 26, 2011, 3:39 pm

aww, looks like i cant do a payback lol:/

CalmBeforeTheStorm - July 27, 2011, 6:23 am

He must have got your UDID or logged in via SSH lol.
