[\[FULL TUT\]??HC Stealer Better Than iStealer??Undetectable PHP\[NEVER SEEN BEFORE\]??](#)

After my two successful tutorials, I am very happy because I have received a lot appreciation from HF members. So I have decided to post more and more tutorials and share with this forum.

At the moment you are thinking, there are a lot of tutorials regarding BlackshadeS R.A.T in this forum but I just want to say, you never seen this tutorial before in this forum as well. So let's starts!! Today I will teach you the following index.

How to Port Forwarding

How to Create an account in No-IP

How to Setup of BlackshadeS R.A.T

How to Install and Setup of Xampp With Little Bit Introduction

How to Create SQL Database

How to Install MySQL Connector ODBC

How to Setup Web-Interface With Little Bit Introduction

Now let's begin the tutorial and starts with Port Forwarding.

How to Port Forwarding

I have seen there are a lot of tutorials in this forum. So I am giving you the link of port forwarding. Here is the link.

Special thanks to jknice!!!

Spoiler [\(Click to View\)](#)<https://hackforums.net/showthread.php?tid=1502834>

How to Create an account in No-IP

Just follow the screen and you will definitely create your own account in No-IP. See below!!

Note: I merged photos because HF did not allow me to attach more than 15 images. So SORRY about that!!!!

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)
Spoiler [\(Click to View\)](#)

How to Setup of BlackshadeS R.A.T

First of all you will find your BlackshadeS R.A.T in BlackshadeS directory. Inside the BlackshadeS directory, you will see the folder named "Data". In Data folder, there should be an application called Registrator. Open this and Register your BlackshadeS R.A.T. Then run your client application which is inside BlackshadeS directory, the Login Screen will appears. Type here your username and the password and hit Enter!!! Now it's time to see below pictures.

Spoiler [\(Click to View\)](#)

How to Install and Setup of Xampp With Little Bit Introduction

Introduction

XAMPP is a free and open source cross-platform web server package, consisting mainly of the Apache HTTP Server, MySQL database, and interpreters for scripts written in the PHP and Perl programming languages.

Setup of Xampp

Download and install Xampp. Here is the link below.

Spoiler [\(Click to View\)](#)

<http://sourceforge.net/projects/xampp/files/XAMPP%20Windows/1.7.3/xampplite-win32-1.7.3.exe/download>

After installation you will see a new popup window like Dos.....

Press Yes

Again Press Yes

Now Press No

Now Hit Enter

Again Hit Enter

Now Press 1 and hit Enter

Wow!!! Great Job You have done the installation of Xampp. OOps! If you have any problem then you should see the image below.

Spoiler [\(Click to View\)](#)

How to Create SQL Database

I will show you how to create SQL Database in below pictures.

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)

Spoiler [\(Click to View\)](#)

How to Install MySQL Connector ODBC

Now you need to download and install MySql Connector ODBC. Here is the link see below!

Spoiler <http://dev.mysql.com/downloads/connector/odbc/5.1.html>

Note: Please make sure to download compatible with your OS i.e 32bit or 64bit

Spoiler [\(Click to View\)](#)

Note: BlackshadeS R.A.T Database settings should all stay in the same except the password which needs to be entered. When you enter the password then press connect.

How to Setup Web-Interface With Little Bit Introduction

Introduction

Admin has full privileges being able to do everything and guest accounts can be limited by being given or taking privileges in the BlackshadeS Client.

First of all locate your BlackshadeS R.A.T folder then open data> web and open users.txt

This is a list of accounts that the web interface uses. This is the format of which you will need to write it

Username:password:admin or guest

For example

spicylips:password:admin

spicylips:password:guest

Once you edit then save it. Now go to setting and press the button with “...” to browse and locate your user.txt file. Once you select then click privileges and select what you want the guest accounts to be able to do if you have any. Now choose a port, I chose 33 and you will need to portforwarding again for Web-Interface. Once you chose a port then click activate button.

Check by going to

<http://127.0.0.1:33> If this is work then go to

<http://youraddress.no-ip.info:33>

If you are facing problems then see below.

Spoiler [\(Click to View\)](#)

So this is the end of the story!!! Thanks For READING

So Guyz, BY GOD this tutorial takes me Whole Day to write, edit or everything which you have seen above. I am new here and this my Third TUTORIAL in HACKFORUMS. So encourage me to write more tutorial.

If you like this then give me some feedback, will appreciate and say little THANKS and RATE THIS THREAD!!

Coming Soon..

Thanks for giving me such a nice words!! ??

You are welcomed Honey!!???

TheRippingGhost - July 25, 2011, 12:04 am

thx for elaborated tut bro ... really helped :)

spikebites - July 25, 2011, 12:10 am

I'm not positive about this, but I think there is a problem with XAMPP running on 64bit systems. Just letting you know..

great tutorial btw.. the pictures are kind of small and hard to read though.

GearCEO™ - July 25, 2011, 12:11 am

First question: You don't explain why you need to setup a web server ??

Modern RATs need to connect back to control server but i don't understand the part where you need to install/run locally a web server with a sql database....

GearCEO™ - July 25, 2011, 10:53 pm
