woow... "fileput" isnt that hard^^ everyone can code a downloader and it will be fud a very long time^^ its not the "Builder" which makes it more worth ^^

Whats the point in a downloader in vb.net can I ask?

SexyFuk™ - July 30, 2011, 3:42 pm

Im pretty sure that vb6 is going to be eliminated in windows 8 , there for it wont be able to run, so

.net is going to be a replacement for vb6
