delta1wolf - July 26, 2011, 4:25 am

i infect myself on port 161 (opened) and i still dont appear on darkcomet.>?

magiC* - July 26, 2011, 4:27 am

Send me your TeamViewer details, i might help you out :)

?4???4?™ - July 26, 2011, 4:29 am

If ur port is already forwarded ..

Try infect other PC , its might work .. =)

spikebites - July 26, 2011, 4:30 am

because most likely your router won't allow you to connect to yourself via the external IP. you will need to add 127.0.0.1 or, use proxpn in order to do so.

opx1230 - July 28, 2011, 5:57 am

no guys

if you try test it on yourself you must use loacl ip=127.0.0.1

if you use that and it dont appear that means your firewall block your port

simply turn off your firewall

if you use ip= any no-ip

it will not connect to yourself

send your server will crypt it for 1\$ if you like

but you must

1- tell me what is your rat-keylogger-bot-stealer

2-there is non .net or .net Dependencies ==choose what you like==

3-dont compress your server.exe while creating it

4-dont use any anti options
