Thread: [HELP!!! Crypted keylogger not sending logs.](#)

Vasily Zaitsev - July 26, 2011, 8:17 pm

On mediafire one file has 5 downloads, another has 2, both crypted, I tested the email info before having it crypted, can anyone confirm a problem? I'll include a keylogger in a spoiler.

Spoiler ([Click to View](#)) Carefull, this is a keylogger removed

Morchid - July 26, 2011, 8:20 pm

Remove the download link before someone reports you please.

Vasily Zaitsev - July 26, 2011, 8:23 pm

Ok I removed it (I'm not trying to infect HF members, I clearly stated it's a keylogger) but how am I too know if it is the crypters fault or some random problem?

MirrorDude - July 26, 2011, 8:26 pm

dude when u crypt a server... sometimes it becomes corrupt and doesnt work...probably what happened to u...

Vasily Zaitsev - July 26, 2011, 8:28 pm

Ok, I'll just make a new server... \$2 down the drain lol

K?ala - July 26, 2011, 8:28 pm

Always test it after you crypt it to make sure it isn't corrupted.

+mK - July 26, 2011, 8:29 pm

What keylogger was it, and what crypter was it?

Vasily Zaitsev - July 26, 2011, 10:10 pm

parallels

7 via `parallelsquote='AnAngryKoala' pid='14011540' dateline='1311737321']`

Always test it after you crypt it to make sure it isn't corrupted.

`[/quote]`

How? On my Virtual Machine? I use parallels on a Mac..

It was Project Neptune, idk what crypted it was...
