Thread: [Recommend me another good keylogger!](#)

Ok so I've been using Project Neptune by Thyonic, and I'm not very very happy with it, does iStealer support Gmail, Steam, and Minecraft? Or what is another good keylogger, free or about \$10-\$15 USD that accepts paypal...

Blackshades stealer is pretty good. I have it, I bought the platinum or premium package, well the most expensive (\$25) package and I'm happy with it. It starts at \$10 - \$25. Well worth it IMO.

Predator Pain Logger is sexy.

@Pillsbury. Pretty sure he asked for a keylogger, not a stealer.

My opinion won't mean much posting after the Leet's but XYZ logger by VersX is pretty good. I just bought it like 2 days ago and it's easy to use, great features and really good for the price.
