Thread: [Verifying iDevice UDIDs | Upgrade To iOS5 Today!](#)

Sultan - July 31, 2011, 2:03 pm

Hello fellow members of HackForums,

I have had possession of my Apple developer for quite some time right now and as some of you may know, you can activate upwards of 50 UDIDs.

Some questions you may have:

What Does Activating My UDID Do?

It allows you to run iOS 5 beta versions on any iDevice (iPhone 4, iTouch etc.). Without your UDID activated, upgrade to iOSn5 would most likely result in your iDevice being bricked. I have seen tons of people try, and tons of people fail. Activating your UDID is the only safe way to upgrade to iOS 5.

How Do I Retrieve My UDID?

It's simple, all you have to do is plug your iDevice into your computer, open up iTunes, go to the iDevice and click on the serial number. It will change numbers and voila, you have found your UDID :)

Is iOS 5 Worth The Upgrade?

Definitely! Sure, it does have bugs, but any beta comes with a few bugs. You can check out my hands on review below.

What Are The Prices?

For regular members(such as myself) it will be \$5.99.

For L33T members it will be \$4.99.

For Ub3R members it will be \$3.99.

Don't flame on the thread complaining about prices, because the discounts are based on how much the upgraded members have contributed to the forum. I will be purchasing L33T as soon as I get 6 or 7 sales.

How Do I Pay You?

Payments will be made through PayPal, either PM me or contact me on AIM if you are interested. I will then give you my Paypal to send the money to, and will instruct you to send your UDID and iDevice type to me in a PM. After everything goes through, I will verify your UDID and send you a link to where you can download the appropriate version of iOS 5 for your specific device.

I am willing to register an Ub3R's UDID for free in order to get a legitimate vouch.
