Thread: [\[leets/ub3rs\]ikeyguard for the iphone cracked deb\[Leets and ub3rs\]PROOF JUST ADDED](#)

Grin - August 1, 2011, 8:00 pm

More effective method for keylogged 100% success rate found. This is a new method I just found out. L33ts and ub3rs!!! Just so n op one is confused I found out a new keylogged not ikeygaurd. Last thread update.

Read below for original thread

If none of my methods work I have a source for another keylogged not as good but good enough. I have the link. This is still for l33ts and ub3rs.

Post here shoot me a pm

It seems like some people say this deb doesn't work!! It does. Watch my video. EvRY letter.

Anyway I have a new repo for keygaurd

Pm me and post here if you want the repo instead. I can take a guess that it may not work for all firmwares. Remember the cracked one is an older version of the package I am on ios4.0

i found the ikeyguard deb that works.

You must download ifile cracked to install

the .deb you have to download for the ipod

post here and pm me to get the link

the cracking repositories don't have this one. xsellize(it was removed) insanelyi nope sinfuliphone nope

This keylogger is the best and i have found the download link.

Oh BTW you guys may need safari download plugin

remember i am giving it out for free and this app usually cost 10\$

so...

Thanks is appreciated.

i will provide proof on my ipod touch in a sec. i'll upload it to youtube in an hour or so.,

EDIT:<http://www.youtube.com/watch?v=oS9gT85Fluw> there is the proof

sorry about messy format im kind of in a rush

please be patient if i take awhile to respond. I may be busy. so please respect that.

i made this thread in response to <https://hackforums.net/showthread.php?tid=1547730>

Eventually this offer will be open to all members. Please don't ask when. Because my response will be not now. I will open it when i open it.

THIS THREAD IS NOW A READ-ONLY THREAD

THIS THREAD IS NOW CLOSED VISIT MY OTHER

AnthonyWasH3r3 - August 1, 2011, 8:13 pm

There is another one that is free on the same repository as Swype is originally. But I forgot the name. Does this send to email/ftp server? Or just kept locally?

Muscle Nerd - August 1, 2011, 8:16 pm

Thanks man. But what exactly does this do?

Grin - August 1, 2011, 8:18 pm

To answer both of your question

it is a mobile keylogger it logs each keystroke you make on the ipod touch. It saves to http://:4444.

AnthonyWasH3r3 - August 1, 2011, 8:28 pm

Oh that's cool that it saves to the IP. Nice find and all.

But the thing is;

unless you know the IP of the person you install it on, you can't really use it for malicious purposes.

Thanks for finding the crack!

Glitched - August 1, 2011, 8:29 pm

AnthonyWasH3r3, This has email support, but no FTP. The one on Wynd's (swype) is local only.

AnthonyWasH3r3 - August 1, 2011, 8:34 pm

REALLY?!

So I'm guessing you have to set the email while you install? It would be nice if I could hard program it into the keylogger. Hmm....

yes sir this is correct

also...if someone uses your ipod/iphone to sign in to their email/facebook/youtube will have their account information

since it captures all strokes you will know what site they visited without guessing

AnthonyWasH3r3 - August 1, 2011, 8:42 pm

I make sure I don't let anyone touch my iphone >_<

But this could be useful for later on...

Gonna PM you now for the link! :D

yeah...me too i've got things on there for my knowledge only...i hide my important apps and then lock the other ones if someone wants to use a certain app they have to go through me and i type in that password and give to them...

you make them feel like you are very secure and then you steal their information with the keylogger it's funny really ?

it's funny rreally ?

Haha yeah! Nobody that knows me trusts me anyways :/

I ask to see someone's phone, tell them to download something, or visit a website and no body trusts me lol :(oh well haha.
