Thread: [***Port Forwarding Issues*** Spynet Connects to only one port...](#)

PutItMyButt - September 26, 2009, 3:57 pm

Spynet is connecting only to port 80. I forwarded port 80 and about 5 more. the other ones dont work. I exit spynt and try different rats and 80 wont work for them and same with the rest... any ideas I hate fucking spynt

bitorrent - September 26, 2009, 4:11 pm

Did you check if the ports are truly open or do you just have the setting in your router? Sometimes modded routers like dd-wrt have problems port forwarding so you should double check with the program PFPort Checker.

PutItMyButt - September 26, 2009, 4:18 pm

Okay ill google that program and check it out. If it's not forwarding after doing the router settings what should I do next? And Like i said before i have done this before just for some reason its not working now. I have an AMBIT router and am using timewarner

bitorrent - September 26, 2009, 4:20 pm

You might want to check possible firewall settings.

PutItMyButt - September 26, 2009, 4:22 pm

None on, no av

msg2short

bitorrent - September 26, 2009, 6:25 pm

Might want to check your default Windows Firewall to be safe.

PutItMyButt - September 26, 2009, 9:44 pm

already did :-(. I know how to set these up it sucks that this is happening i dont know whats going on...

bitorrent - September 26, 2009, 9:52 pm

Do any other RATs work on diff ports? BF PI?

PutItMyButt - September 26, 2009, 11:02 pm

Nope just spynt with port 80 its fuckin weird

[B]iishop - September 27, 2009, 3:12 pm

Spynet is backdoored. Just an FYI, i mean you can use it, but know that it is backdoored. Use Cerberus.

And to answer your question...you setup is probably wrong. Click option and make sure everything matches your setup stuff.

PutItMyButt - September 27, 2009, 5:22 pm

I did.... I know how to use rats etc, I'm not saying I'm always right, but I have double/triple/quadruple checked everything. Spynet 2.2 has been tested and isnt backdoored... I dont wanna use it

anyways, I'm just saying i'm using it ATM because its the only one that works. And it only works on port 80, no other ports. Fuckign weird

.
