Thread: [Autumn HTTP Bot | C/C++ | FF/IE FormGrabber | Rootkit + more! | Sales started!](#)

Rowdy - August 2, 2011, 2:28 pm

DO NOT DO ANY DEALS WITH ANYONE THAT IS NOT IN THE LIST OF CONTACTS! After many months of waiting, Autumn Bot has finally released!

Autumn (previously known as Colt) is a brand new bot that has been coded from the bottom up over the past six months, and it is coded in C.

Autumn's uniqueness comes from its ability to keep the PC clean from other malware. The bot will block several things in order to keep the PC clean of all malware except Autumn.

The bot has an advanced ring3 rootkit and uses special techniques injects itself into every process (also known as system-wide injection), hooks various APIs to hide itself and achieve a level of stealth that effectively hides itself from the infected user and all other malware that may exist on the system.

Autumn Bot is compatible with every Windows operating system from Windows 2000 onwards, which includes, but is not limited to:
Windows 2000, Windows XP, Windows Server 2003/2008 (+R2), Windows Vista, and Windows 7.
The bot supports both 32bit and 64bit versions of all of these operating systems.

To maximize the amount of bots obtained, Autumn utilizes only unicode APIs (where applicable), providing full compatibility for all Asian and European operating systems.

[?] System-wide injection : The bot process injects into all existing processes (x86).

[?] Ring3 rookit : Uses hooks to hide the bot's registry keys, and the bot file.

[?] pcGuard :Detects & removes all common IRC bots
Blocks browser exploit packs from executing malware on the system
Detects, blocks, and removes all malware that try to inject into another process
Detects, blocks, and removes all bots that attempt to spread via USB

[?] RUSKill : Download/Execute addon; the downloaded file will be monitored and removed on reboot (Great for PPI, I4I, and bot selling!)

[?] MSN spreader : Messages sent through the MSN protocol are transformed to your own spread message after a specific number of messages have been sent.

[?] MSN contact grabber : When logging into MSN, all contacts are grabbed & sent to the panel and are able to be exported (Great for mass mailers to spread!)

[?] Formgrabber : Grabs login info as soon as they are inputted. (Supports HTTPS and grabs from popular email sites, file hosts, and other popular sites!)

[?] DNS Blocker/Redirector : Used to block or redirect one website to another

[?] USB Spread : Silently spreads to USB devices such as flash drives & external HDDs

[?] MD5 Management : You can specify an MD5 for updating bots, allowing you to manage multiple crypts of your bin easily

[?] DDoS : TCP/SSYN/UDP/SLOWLORIS floods are all available.

[?] Base Bin (HTTP) - \$150.00

[?] Rootkit- \$50.00

[?] pcGuard- \$65.00

[?] RUSkill- \$50.00

[?] FormGrabber (IE/FF/FTPs) (In beta, available within a few days!) - \$60.00

[?] MSN Spread (In beta, available within a few days!) - \$50.00

[?] USB Spread (In beta, available within a few days!) - \$20.00

[?] DNS Blocker (In beta, available within a few days!) - \$30.00

[?] MSN Contact Grabber (In beta, available within a few days!) - \$20.00

[?] UDP/TCP/Slowloris DDoS - \$45.00

[?] CURRENT FULL BIN PRICE - \$300.00 LR/WMZ

We Accept LR and WMZ

[Get your money exchanged!](#)

[?] FTP Stealer : Steal FTP login details on the fly from FTP clients.

[?] RDP Stealer : Steal RDP login details on the fly.

[?] Reverse socks5 : Open proxy to the infected PCs.

You are allowed to have the same sales thread in 2 different sections, only for sales threads though.

Why are you obsessed with attempting to ruin this product?

Sounds like you're mad...maybe I'll reinstate the -3 I put on you :) (Aug 2, 2011 04:31 PM)Error 403 - forbidden Wrote: [\[CITE\]](#) There are questions needing to raised about this bot, untill then i would suggest being wary.
Ask away please ;)

I'm open to answering.

Its out! Amen!

I've been waiting for this ever since mine own eyes looked upon the progress thread!

It looks beautiful, can't wait to buy. ?

Edit Just Noticed This: What happened to the BTC mining feature? (Not that its really a deal-breaker, just curious)

The miner is being implemented...we wanted it to be a surprise because we're including it in the bot free as a gift to customers :P

When creating a task, you would see the choice for mining lol.

Anywho, I guess its out now, you can expect to see it in the bot when you purchase.

g0dspeak - August 4, 2011, 10:18 am

Bump for the nicest bot on HF.

Rowdy - August 4, 2011, 4:43 pm

Just a heads up: Some people are PMing potential customers or messaging them over IM and claiming they bought this bot and it's shit...this is not true. We are still in the process of purchasing an encoder for the panel, and nobody has received the bot yet, nor has Witch allowed anybody to purchase yet. Once he has got an encoder, he will start selling, which should be today! If you've got people messaging you about what they think of this, don't listen to them because as of the time of this post, not a single person has been allowed to purchase yet, but sales will be start tonight!

I will difently buy this. But is it cryptable. With any C++ Crypter ?

Will you update the Miner thing in the updates ?

And the next thing. The USB spreading system. Is it FUD ?

cheers

RK 62 - August 6, 2011, 9:44 am

This bot looks really great because you coded it for months. I will wait and see people's feedpack so i can decide if i will buy or not. And probably this bot is really coded 100% from scratch because it took you time.

Yeah, there are no detections AFAIK.

Oh, the miner should be available when all the other modules are released.

NiCe i would buy but i haz no money

BlackHops - August 7, 2011, 10:45 am

the video looks really nice, I'm assuming there's no "botkill" command, the pcguard just does it automatically by it's self?

Yeah, pcGuard will detect shit on its own and deal with them, unless you disable it. By default, when a bin is ran pcGuard is enabled. If you send a DL/EX task and you want pcGuard to be off so it doesn't kill it, you can tick the box. To re-enable pcGuard, the bots must either receive a new DL/EX command WITHOUT the pcGuard disable box being ticked, OR their PC has to reboot.

The member that coded this bot is a SCAMMER, do NOT deal with!

Proof:

<https://hackforums.net/showthread.php?tid=1223198>

Also ask yourself why he has changed his username...

Also remove my name from your shitty little video you son of a bitch. And stop scamming people!

RESELLER is okay, bot coder is the SCAMMER!!!
