Thread: [Suggest good paid fud keylogger/stealer that can bind into image file](#)

g3nX - August 4, 2011, 5:21 pm

Hello, I am looking for a very good paid FUD keylogger/stealer that I could bind in with the .jpeg files. It has to be compatible with win7 x64.

Please share ! ?

Thanks in advance ! ?

+mK - August 4, 2011, 5:38 pm

Well, you first need an exploit to be able to do it - you can't just bind an image to it and hope it works.

g3nX - August 4, 2011, 5:47 pm

you mean there is no such keylogger/stealer that could put the server into image file and once that image is opened the server executes ?

Kom - August 4, 2011, 6:04 pm

You can bind any server to an img, however the extension will be .exe.

Which is why+mK said you need an exploit so that you can spoof the extension to .jpg or an img extension.

g3nX - August 4, 2011, 7:46 pm

oh i see... so besides that, can you guys recommend me some good paid fud keyloggers/stealers ?

Kom - August 4, 2011, 7:50 pm

I personally use XYZ and I love it.

There really isn't a "Best" as people will only tell you what they use to be the "Best" so you just need to read about the loggers on sale and form your own opinion =/

g3nX - August 5, 2011, 3:50 pm

Ya i was leaning towards XYZ also... You have the 3.0 version ? I'm reading in XYZ 3.0 thread that many people have lots of issues with it. How is it working for you and what OS you have ? Also I just discovered another keylogger/stealer that looks pretty good called Predator Pain 5. Any thoughts on it ?

Kom - August 5, 2011, 6:42 pm

There are many people who own xyz. Only the people who have issues post on the thread so they can get their issues fixed. I have win 7 and yes I have the 3.0 version. I love it, hasn't failed me yet.

I have no input on Predator pain as I have never used it so I can't say anything good or bad about it.

g3nX - August 5, 2011, 7:16 pm

I got you bro, thanks for sharing your experience with XYZ. Did anyone try both, XYZ and Predator and could share your experience with them ?

Vexna - November 13, 2011, 7:22 am

Reported the post above as 'Other' because the thread is older than 48 hours and it should be posted in the Beginners Hacking forum.

Could anyone share me the links on how to purchase Predator Pain keylogger and XYZ KeyLogger
Thanks

rabbyracks - December 3, 2018, 11:02 am

Can someone explain what a FUD is? New to keylogging. And all those keylogger programmes aren't ready to use?

N41J4Br33D - December 10, 2018, 11:24 am

Fully UnDetected (FUD) ... use Google to search questions like this too.

Alright thanks man

shanker808080 - May 30, 2020, 6:27 am

Same i am need Team

Matiex - June 1, 2020, 4:49 am

You need an exploit to bind with image or anything, the keyloggers can't do it alone.
