Thread: [Leaking sigsauer security intelligence group](#)

**Lulzamac** - August 5, 2011, 5:33 pm

<http://www.thehackernews.com/2011/08/sig-sauer-security-intelligence-group.html>

and

<http://www.cyberwarnews.info/2011/08/05/habib-rafiq-hacked-and-accounts-leaked-by-mrpropstwit/>

my first problem is that when leaking the info from the sig sauer site i use my real ip

so im kinda fucked lulz

well are you in australia if not check if your country has an extradition treaty with australia if not your safe :)

otherwise spread how you jacked there site and get others to attempt it, this will mean a flood of real and fake IP's visiting the vuln :)

it spread around the web like a virus twitter hacking news sites

in my paste bin it has a bunch of admin and user passwords for the site so  
yeah i think im kinda safe but they still can check the logs at the time of me getting in but not much is done when no proof even with proof still take them long time to get the paper work done to get there fat ass over here

but what has me going is on thehackernews

just put /admin at the end or go to the site and look at the left side (Aug 5, 2011 05:53 PM)? ? x O r ? Wrote: [\[CITE\]](#) <http://www.sigsaueracademy.com.au/admin/>

i might get you a headline on thehackernews or cyberwarnews

if you can deface it :D (Aug 5, 2011 05:51 PM)charliehax Wrote: [\[CITE\]](#) did you find the admin panel bcus i might just go SQLi that bitch and stick a deface on there :D

and if you do deface it can you put small letters saying i sent you? or helped?

I can't crack that wierd hash. :/

I would love to deface that bitch :D
