Thread: [\[Free Crypt Service\] Can someone crypt my CyberGate/DarkComet](#)

**\_Baphomet\_** - August 7, 2011, 10:21 am

Can someone please crypt my CyberGate server or DarkComet server? And if you can, tell me what settings to use for the Rat? Thanks!

I've tried many crypters but could not get them to work. I would pay if I could, but I'm short on money now.

What settings? What do you mean? If you've already made the server, you can't edit the settings.

I haven't made the server yet. I just need to know what settings I should apply to the rat (Such as persistence, injection, etc.) so that someone can crypt it for me.
