Thread: [How i Hacked PBS + BBC - by Charrie Wong @tehwongz](#)

charliehax - August 8, 2011, 11:38 am

So i've just released a PasteBin of a worded (sort of letter) of the details of how i hacked PBS (I do not include any Vuln's has the 2 i used, 1 of them is dead as PBS have removed it and the other can still be used to exploit BE ME :D)

PasteBin: <http://pastebin.com/JXgg6fMc>

You use havij for everything, and every time you have an "excuse" to use it lol'd

Also what FBI hack, you never posted a thread?

I did but it got deleted check my PateBin prof..

and i used havij on these 2 sites and some others out of either:

- 1) Lazy-ness
- 2) 3 massive things at the same time.

- 3 Massive things my ass, grow up.

XSS'ing isn't something massive that takes so much time and effort

Every time you hack something you have excuses for using havij.

What vuln scanner do you use to get the vulns on the websites?

Im not a big fan of acunetix

am gonna ask serious question.

Are you a troll? you cannot be serious.

You make me want to poke my eyes out with a fork. (Aug 8, 2011 02:38 PM)charliehax Wrote: [\[CITE\]](#) No i don't check my pastebin for the last 2 releases...

i has 100 vps which i need because my custom scripted havij download cannot take pressure on my windows 98 laptop! so now i wrote batch script to activate 100 havij on 100 vps then i hack 100 site!

cool story bro, only retards fall for your penile talk.
