What is the SRX HTTP Bot ? SRX is a brand new bot that has been coded from the bottom up over the past six months, and it is coded in C.

SRX uniqueness comes from its ability to keep the PC clean from other malware. The bot will block several things in order to keep the PC clean of all malware except Srx.

The bot has an advanced ring3 rootkit and uses special techniques injects itself into every process (also known as system-wide injection), hooks various APIs to hide itself and achieve a level of stealth that effectively hides itself from the infected user and all other malware that may exist on the system.

SRX is compatible with every Windows operating system from Windows 2000 onwards, which includes, but is not limited to:

Windows 2000, Windows XP, Windows Server 2003/2008 (+R2), Windows Vista, and Windows 7. The bot supports both 32bit and 64bit versions of all of these operating systems.

To maximize the amount of bots obtained, SRX utilizes only unicode APIs (where applicable), providing full compatibility for all Asian and European operating systems.

Features: [?] System-wide injection : The bot process injects into all existing processes (x86).

[?] Ring3 rookit : Uses hooks to hide the bot's registry keys, and the bot file.

[?] pcGuard :

Detects & removes all common IRC bots

Blocks browser exploit packs from executing malware on the system

Detects, blocks, and removes all malware that try to inject into another process

Detects, blocks, and removes all bots that attempt to spread via USB

[?] RUSKill : Download/Execute addon; the downloaded file will be monitored and removed on reboot (Great for PPI, I4I, and bot selling!)

[?] MSN spreader : Messages sent through the MSN protocol are transformed to your own spread message after a specific number of messages have been sent.

[?] MSN contact grabber : When logging into MSN, all contacts are grabbed & sent to the panel and are able to be exported (Great for mass mailers to spread!)

[?] Formgrabber : Grabs login info as soon as they are inputted. (Supports HTTPS and grabs from popular email sites, file hosts, and other popular sites!)

[?] DNS Blocker/Redirector : Used to block or redirect one website to another

[?] USB Spread : Silently spreads to USB devices such as flash drives & external HDDs

[?] MD5 Management : You can specify an MD5 for updating bots, allowing you to manage multiple crypts of your bin easily

[?] DDoS : TCP/SSYN/UDP/SLOWLORIS floods are all available.

Hi aztech,

please provide an AV SCAN of the builder ;)

TheLuckyGuy - August 8, 2011, 4:17 pm

<https://hackforums.net/showthread.php?tid=1553725>

It looks like the same thing !

But I think Autumn HTTP Bot is the legit one !

And the video is the same as in the other threat.

Hope someone can sort some things out with this guy !

cheers

I would recommend that you shouldn't download these files !

cheers

anyways lol.

Im downloading it now ? I just opened link clicked throught the thing twice . Then closed , opened it again and it worked :)

EDIT : Stupid download . Not what it say .

MonkeyBalls - *August 8, 2011, 4:37 pm*

Direct C+P of Autumn bot thread.

proTWiiZ - *April 15, 2012, 3:49 pm*

not legit then?
