Simple Trick Using Proxy List on iMacros for Firefox

Requirements:

- Mozilla Firefox
- iMacros for Firefox Addon
- Proxy Tool Addon

The simple trick is just add this code on every end of iMacros code:

Code Code:

TAB OPEN

TAB T=2

TAB CLOSE

TAB T=1

And make sure, check "Rotate Proxy on every new window/tab" in Proxy Tool Addon under Settings. This code will automatically Open and Close the Tab and in one time will Rotate Proxy. How it works? Follow this steps:

For example 1: Twitter Signup

1. Create file called TwitterSignup.iim and put on Macros folder following this code:

Code Code:

VERSION BUILD=7110203 RECORDER=FX

TAB T=1

CMDLINE !DATASOURCE twsignup.csv

SET !DATASOURCE_COLUMNS 4

SET !DATASOURCE_LINE {{!LOOP}}

SET !ERRORIGNORE YES

URL GOTO=https://mobile.twitter.com/signup

TAG POS=1 TYPE=INPUT:TEXT FORM=ACTION:/signup ATTR=ID:oauth_signup_client_fullname
CONTENT={{!COL1}}

TAG POS=1 TYPE=INPUT:TEXT FORM=ACTION:/signup
ATTR=ID:oauth_signup_client_screen_name CONTENT={{!COL2}}

TAG POS=1 TYPE=INPUT:TEXT FORM=ACTION:/signup ATTR=ID:oauth_signup_client_email
CONTENT={{!COL3}}

SET !ENCRYPTION NO

TAG POS=1 TYPE=INPUT:PASSWORD FORM=ACTION:/signup
ATTR=ID:oauth_signup_client_password CONTENT={{!COL4}}

TAG POS=1 TYPE=INPUT:TEXT FORM=ACTION:/signup ATTR=ID:captcha_response_field
WAIT SECONDS=20

TAG POS=1 TYPE=INPUT:SUBMIT FORM=ACTION:/signup
ATTR=VALUE:Create<SP>my<SP>account

CLEAR

TAB OPEN

TAB T=2

TAB CLOSE

TAB T=12. Create file called "twsignup.csv" and put in Datasources folder following this code:

Code Code:

FullName1,username1,email1,password1

FullName2,username2,email2,password2

FullName3,username3,email3,password3

.....

FullName10,username10,email10,password103. Add your proxies in Proxy Tool (max 100 proxies for each HTTP, Socks 4 or Socks 5). For example, add 10 live proxies in HTTP.

4. Check "Rotate Proxy on every new window/tab" in Proxy Tool Addon under Settings.

5. Then fill 10 above "Play (Loop)" under "Max" then click "Play (Loop)"

6. Done. Don't forget to fill every captcha.

For example 2: Youtube Views

1. Create file YTviews.iim or something following this code, then put in Macros folder.

Code Code:

VERSION BUILD=7110203 RECORDER=FX

TAB T=1

SET !ERRORIGNORE YES

TAB OPEN

TAB T=2

TAB CLOSE

TAB T=1

URL GOTO=http://www.youtube.com/blablabla..

CLEAR

REFRESH2. Add your proxies in Proxy Tool (max 100 proxies for each HTTP, Socks 4 or Socks 5). For example, add 100 live proxies in HTTP.

3. Check "Rotate Proxy on every new window/tab" in Proxy Tool Addon under Settings.

4. In Proxy Tool, with right click "Referrer" then choose Rotate. Right click again, click "User Agent" and choose Randomize All.

5. Then fill 100 or more above "Play (Loop)" under "Max" then click "Play (Loop)"

6. Done.

Your Mozilla Firefox is now like a bot
