I usually don't mind filling out a few surveys to onlock a download of such a usefull tool but I tried both links and every survey exept the ones that you have to install software to unlock the download and the download will still not unlock for me.

I even tried using a few different proxies and I even made a new email account and it still wont unlock.

I don't know what the heck is going on. I usualy never have issues with surveys but this will not unlock for me.

Is there any way I can get a different link please?

I am not a skidd and I would never give out that link to anyone. I just need this tool and the survey isnt working for me.

Thank you for this great contribution.
