I created a simple plugin for the Private Message Tracking system on MyBB forums.

This gives users the ability to clear all of their read/unread tracking messages with a single click.

Picture Example:

This is how it would normally appear:

Now with my plugin, you will see 'Clear All' buttons for both read and unread tracking sections.

You can find the official release page at the following link:

If you have any problems with it, please contact me.

Thanks.
