This is my third part of My Way Of Spreading And Get 100's Of Installs Per Day. The beauty of this spreading method is 100% chance to get your favorite / targeted victim. So let's cut the topic and starts target spreading.

WHAT WILL YOU NEED TO DO THIS?

1. ManyCam (Fake Video CAMERA)
2. Fake Videos
3. Make Your Server FUD
4. Exploit An EXE File Extension
5. How To Spread

MANYCAM (FAKE VIDEO CAMERA)

ManyCam is freeware that adds live CGI graphics such as sunglasses or hats to a webcam's output, with those automatically tracking face movements. The name of the software is derived from its feature allowing users to use their webcam with multiple Windows applications simultaneously. It also supports dynamic and static virtual backgrounds, Text Over Video, and Drawing over Video. In version 2.3, virtual 3D masks were added. ManyCam can also use the desktop as a webcam.

There is also simple module for creating effects included within the software, which mainly consists of adding image files / videos and converting them to a ManyCam friendly format. Face effects and backgrounds can also be created. The ManyCam website has a database of more than 7,000 effects, most of which are user-generated.

ManyCam uses a webcam or video camera as input for the software itself and then replicates itself as an alternative source of input. Because of this, ManyCam works nearly all chat software such as Windows Live Messenger that can find alternative video inputs. Here is the link of download ManyCam.

Just download and install it. Here is the download link:

FAKE VIDEOS

This is the main thing which we are using in this section. Download some fake videos of girl / boy whatever you like, It's depends on you. Some fake videos can be found from here. Here is link

MAKE YOUR SERVER FUD

EXPLOIT AN EXE FILE EXTENSION

Spoiler ([Click to View](#))<https://hackforums.net/showthread.php?tid=1510817>

HOW TO SPREAD

Now it is the time of Spreading RAT / Keylogger server. Open your Yahoo Messenger and login in. After when you login on then Go Messenger > Yahoo! Chat > Join Room as show in below.

Spoiler ([Click to View](#))

Then go to Adults Room (or whatever) because you will find thousands of people there. See below.

Spoiler ([Click to View](#))

When you enter the room then Yahoo will ask enter the CAPCHA. Then you should write the CAPCHA to get access the room. See Below!!!!

Spoiler ([Click to View](#))

When you entered the room, there are thousands of people who invite you to chat with you in few seconds. See the picture below.

Spoiler ([Click to View](#))

After this you will need to do just type in chatroom "COME ON C2C (Cam to Cam)" or something like that. When the people invite you on CAM then first of all you will need this. Just open up your ManyCam then tab Sources > Movies. Then you will see in the bottom box says Open new file(s). Just click > open file (s) and locate your fake video as I do. See the below image.....

Spoiler ([Click to View](#))

As you can see I set this up correctly. This is the best way to get the slave. Now the next step is minimize your ManyCam and accept the permission of video call from the people who invites you to call video chat. When the video call start then chat with him / her like this!!

Target: Amazing..... You are so pretty and sexy as well!!!

You: Thanks but people are not thinking about me as you thought.....

Target: Why? I think people are too stupid who thought like that

You: This picture shows you why people laugh at me.

Target: okay show me I want to see that and really I want to know why stupid people laugh at you?

Then paste your server. See below the image then you will get it.

Spoiler [\(Click to View\)](#)

As you can see above, how this is easy to get more and more victims from yahoo. I got these 02 victims within 1 ½ minutes.

If you like this then please leave some comment, its necessary for me and also I am asking from you again that you ever seen this method before in HF. If yes then please mention the link (I Highly Recommended). And Poll This Thread as well. I will much appreciate.

This is really SAD Because A lot of PEOPLE IN HF are Viewing and No ONE gives me comments. This make me laugh really.. ???

Now I am thinking that I never share my tutorial in HF.?????????

Hi, spicylips

? Awesome Work !!!

I like your tutorials, you presented every topic in very easy to understand step-by-step method.
however I havent tried any of your method till now...
But your tutorials seems so simple & good that it insist me to try one of them atleast once....
So I am also going to make my own server and then try these tricks...
Hope the tutorial works well...

Thanks for the share mate.

Also remember to use the binding method to a jpg.

schopnehauer - October 25, 2011, 12:26 pm

nice, thanks.

some comments -

the "exe exploit" does not work with many IM like msn. also it has been patched by most browsers
long ago.

in win7 the .scr prompts the user to install a screen saver.

in MSN the file will be sent as an executable. MSN will not allow you to send at all if the user has
not scanned the file (and for some reason it almost always gets detected).

people who try this must use some smarter ewhoring+SE techniques.

Great method! But I have one query. If I'm not wrong, the .exe exploit is no more working like that. I mean, when you send the .exe dressed as .scr , the messenger shows an .exe, any take on that?
