Thread: [Public Service Announcement](#)

Xori - August 16, 2011, 6:59 pm

Today I saw way too many horrible cryptography tutorials (luckily none on HF), where a fucking spastic used 'Key' and 'Mutex' synonymously, and most people probably realize where he got that idea.

Mutex, has nothing to do with cryptography, it's a thread synchronization method, and when a RAT client tells you to randomize the mutex you are not feeding a polymorphic crypter like these fuckheads thought they are, you are making sure that only one instance of the same server will be running.

The main source of headache -

<http://www.hackcommunity.com/Thread-Polymorphic-RC4-Encryption>

Quote:All encryptions are given a "mutex" that mutex, is static on standard encryption, while on polymorphic it is generated with each new compile.

If you ever make a cryptography tutorial, atleast make sure you're not talking out of your ass.

hehe i can see someone is madddd. =]

But yeah... I've seen a lot of this shit too rofl.

Mr. Fink - August 16, 2011, 7:01 pm

New school people thinking they're all hardcore using them big words ?
