Thread: [\[Source\] Proxy Changer](#) [\[Source\]](#)

khvex - August 17, 2011, 1:51 am

We'll I've created a 'proxy changer' that enables and disables the proxy in your settings, this saves time as you don't have to navigate through 10 windows to get to it.

Now the code is below but there is one KEY problem. For the proxy change to take effect you still have to navigate to it.

Please help!

Code Imports Microsoft.Win32

Public Class Form1

Private Sub Button2_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)

Handles Button2.Click

Dim proxy As RegistryKey =

Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Internet Settings", True)

proxy.SetValue("ProxyEnable", 0)

'Created By Coyney!

End Sub

Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)

Handles Button1.Click

Dim proxy As RegistryKey =

Registry.CurrentUser.OpenSubKey("Software\Microsoft\Windows\CurrentVersion\Internet Settings", True)

proxy.SetValue("ProxyEnable", 1)

'Created By Coyney!

End Sub

Testing it as we speak, hope it works XD!

Here's a easy way:

Code Imports System.Runtime.InteropServices

Public Class Form1

#Region "Using Proxy"

<Runtime.InteropServices.DllImport("wininet.dll", SetLastError:=True)> _

Private Shared Function InternetSetOption(ByVal hInternet As IntPtr, ByVal dwOption As Integer, ByVal lpBuffer As IntPtr, ByVal lpdwBufferLength As Integer) As Boolean

End Function

Public Structure Struct_INTERNET_PROXY_INFO

Public dwAccessType As Integer

Public proxy As IntPtr

Public proxyBypass As IntPtr

End Structure

```
Private Sub UseProxy(ByVal strProxy As String)
Const INTERNET_OPTION_PROXY As Integer = 38
Const INTERNET_OPEN_TYPE_PROXY As Integer = 3
```

```
Dim struct_IPI As Struct_INTERNET_PROXY_INFO
```

```
struct_IPI.dwAccessType = INTERNET_OPEN_TYPE_PROXY
struct_IPI.proxy = Marshal.StringToHGlobalAnsi(strProxy)
struct_IPI.proxyBypass = Marshal.StringToHGlobalAnsi("local")
```

```
Dim intptrStruct As IntPtr = Marshal.AllocCoTaskMem(Marshal.SizeOf(struct_IPI))
```

```
Marshal.StructureToPtr(struct_IPI, intptrStruct, True)
```

```
Dim iReturn As Boolean = InternetSetOption(IntPtr.Zero, INTERNET_OPTION_PROXY,
intptrStruct, System.Runtime.InteropServices.Marshal.SizeOf(struct_IPI))
```

```
End Sub
#End Region
```

```
Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs)
Handles MyBase.Load
UseProxy("PROXY:PORT")
WebBrowser1.Navigate("http://www.whatismyip.com/") ' Or other site you want to load.
End Sub
```

End Class
