Thread: [? Updated Oct.16th ? GioCrypter Mod V3xD!](#)

V3xD - August 18, 2011, 2:17 am

Updated on October 16th ?

[img]http://img26.imageshack.us/img26/4152/64screen.png[/img]

GioCrypter - Modded by V3xD! I took my time modding this one and got good results too, its become a little detected by NOD32 and a couple other but nothing major, still very undetected! I've been updating the stub constantly from antiviruses so check back for updates. I didn't mod the stubs source i used hex editing to removed the detections although i do have the source which i used to update the GUI recently so i hope you guys like it, just please provide feedback and say thanks in the thread! I appreciate any shitcash/fileic3 downloaders as it really helps me out although just about no-body uses them.. thanks for reading, enjoy! ?

I'm assuming that you would want to crypt your Server.exe, and to change file version and info's download ResHacker, open your .exe with it and goto version information where you can change all sort of stuff. To add to the size of it you would need a file pumper. Please use the search button.

Checkout that update guys! ((:

NOD32 somehow bypassed my mod like right after i released it lol wtf babydicks

HeyltsJono - August 28, 2011, 2:03 am

Hey V3xD, you're amazing. Thank you so much for this. By the way, if I disable Microsoft SpyNet in MSE, can I scan my crypted files to see if they're (F)UD with MSE without it causing the stub/file to become detectable?

V3xD - August 28, 2011, 3:30 am

Yea you can do that. I scanned the stub with alot of my av's including microsoft essentials and its still fud bro

paganxxxpride - August 28, 2011, 4:25 am

This looks great. I just tried it with my DC4 server and scanned it at NVT and it comes up clean but when I try and test it on myself it doesnt work.

Its says the version of this file is not compatable with the version of windows i am useing.

I am on win7 64bit. Does this crypter work on a 64bit machine?

And if it doesnt could I still upload my crypted server and infect other people that are running a 32bit

machine?

Any help would be great.
and thanx for the contribution.

unknownbomb - August 30, 2011, 3:10 am

Thanks v3xd, just some note, i see it still has not been fixed in 30th august update.

The icon changer fails? If I use it, the crypted file gives error:

Runtime Error "9"

Subscript out of range.

Without changing icon it works properly, but when I change the icon with a 3rd party software ICON CHANGER PRO, the same error pops again when executing it.

Any idea why? Is it cause im on a 64 bit machine? (W7 ultimate x64)

If i had the source code then i would be able to fix this, but i don't. I mod the stub.exe without sourcecode using undetection techniques. So basically i cant fix this.. well. Here's what you could do.. you could crypt it then put it in a SFX WinRAR Archive which will keep its .exe format, allow you to bind files into it, and change the icon. Use search for a detailed explanation.

Edit: Although.. the original stub.exe i started modding for this crypter allowed you to change version info and icon.. but when modding it i fucked up the stub and now it doesn't allow that anymore. So i may re-FUD the stub from its original trying not to corrupt the version info/icon settings.

The job of a crypter is only to protect the server.exe.

Your RAT server usually has startup options already, no additional startups are required.. any startup option that's with a crypter will copy the Crypted.exe (not your server.exe) somewhere and make an autorun for it. So it keeps launching your crypted.exe not your server.exe.

You should try decoding it, since it's encoded with Plaintext>MD5>RC4>ZONG22, you should reverse it and decode it with ZONG22, then RC4, then MD5, and finally you get plaintext which is the password, good luck with it!

trottailma - September 11, 2011, 5:13 am

Does it exist an easier solution?

This is a great crypter! worked perfect for darkcomet 4.1

juperns - September 22, 2011, 6:35 am

very nice crypter i think this is . i like this. thanks

jinrowolf - September 24, 2011, 5:23 pm

No longer FUD I'd say its UD since only two commonly used AV's find it.

Yes I did dark comet 4.1 cannot be encrypted it seems. Thanks for updating it soon hopefully it'll work then. (Sep 26, 2011 07:43 PM)rejkan Wrote: [\[CITE\]](#) What kind of decryption is a "Plaintext"? Cant find it anywhere, sorry for such a retarded question :\$

Plaintext isn't a form of encryption it is the plain text of the password EX: "abc123"

I updated it 2 hours ago, you aren't using the latest update.

DO NOT UPLOAD ON VIRUSTOTAL

DO NOT UPLOAD ON JOTTI

DO NOT UPLOAD ON VIRSCAN

DO NOT UPLOAD ON METASCAN

ONLY UPLOAD TO NOVIRUSTHANKS / SYNFYRE / my-avscan
(always check do not distribute)

By the way here's the new stub on jotti lol only I am aloud to do this to show that its not that detected!

Can't decrypt this for some reason.. What's plaintext?

V3xD - October 3, 2011, 4:47 pm

plain·text/"plan?tekst/

Noun: An original readable text, as opposed to a coded version.

Stub & Client Updated!

Removed AVG & Avast's detection, changed encryption password too. I included a nice GUI design update, i hope you guys like it!

mediaaredicks - October 6, 2011, 1:49 pm

Thanks V3xD!

Tested with DarkComet 4.0 Fix 1 and 4.2 fwb Beta 2 and builds a working crypted server file.

For those who get an error "Run-time error '9': Subscript out of range" when running your crypted file, it's because you haven't clicked the "Done" button when GioCrypter has finished crypting the file. I assume you have to click "Done" to finish writing the crypted file to disk???

Once again, thanks V3xD.

Regards to that "Subscript out of range error", it seams to appear randomly. If it appears when executing a newly crypted server, then I just rebuild it a few times and will eventually get a crypted exe that runs OK. Strange.

mediaaredicks - October 6, 2011, 10:21 pm

I can provide any extra info you need for debugging purposes.

d@rk5id3 - October 6, 2011, 11:25 pm

I downloaded it. I like having to decrypt a pass better then shit cash :)

Checked it's FUD vouch. thanks for the nice crypter. remember only scan on my-avscan.net and novirusthanks.org with don't distribute checked

Hey,

Thanks for the alternative, shitcash sucks; wondering if it's still FUD

BoonBanBarn - October 11, 2011, 1:01 am

Thanks V3xD, i don't know why you release this for free.. i can see you do it just to help the community not expecting anything in return and that's hard to come by, i see all your threads as you have posted so many crypters but i see like nobody +repping you for it.. its like your just being taken advantage of.

But despite how it may seem, allot of us really respect what you doing and can't thank you enough, keep it up bro.
