Thread: [\[NEW and FUD\] Simple Rat - Dont loose RAT Victims anymore](#)

myli - August 18, 2011, 2:52 pm

As described in the Title i'm releasing my own RAT.

It's only used to keep your RATS alive.

What is it used for?

Its used for keeping your RAT alive.

It is used to still have access to your Victim even when your RAT got detected and deleted.

What is it not used for?

It is NOT a full working RAT.

It wont replace your running RAT.

Its not used for illegal stuff and only for testung purpose.

Features It uses Websites in order to get the Link (hard to catch!)

You can choose as many URLs you want Websites can be password protected so it wont be possible to catch the stuff

you can encrypt the Website content so if its catched noone will see whats in there you can use some controls over website (if enabled). It supports download <url>, execute <file>, delete, system <reboot, shutdown, ..>

Settings can be encrypted Files are Executet as HIDDEN

Its possible to use BrowsercontrolOR sockets. Browsercontrol are 100%FUD for long time!! You can set up your Autostart in Regedit and shortcut for now. Use Crypters if you want more startups.

Websites are created by the Builder at the beginning. you can choose if you want to use Random URLs or just use the first reachable host. It will automatically choose the next URL if its not reachable

.. and much more. Ill not implement too much features because it will make it easy to detect.

Cryptersettings

Aslong as it supports EOF and the Startup Path is the Same as its in the Rat then everything should work. The Rat is coded in C# and .NET 2.0.

How to get?

Just post here if you want it and send me a PM. Ill send you the RAT within the next 2 Days. Going to work on some small fixes and send it via ZIP.

Please post feedback or what to update/change.

Thanks to Moonwalker for the Help in EOF ;)[/color]

Not trying to be a fag but that could easily be a virus
because thats easy as fuck to make in vb
not flaming

myli - August 18, 2011, 3:17 pm

-_- i hate this discussion. And no, its a RAT. And no, it will only infect a Computer after the Builded Serverfile has been executed.

I dont infect GUYs because i dont want to risk getting jailed for infecting a GUY. it wont worth it at end.
