Thread: [\[Question\]A Rat with these specs?](#)

thenewestguy - August 21, 2011, 9:12 pm

Infects both x32/x64 windows versions listed with unicode support on server.

Windows 95/95B
Windows 98/98SE
Windows ME
Windows NT 4.0
Windows 2000
Windows XP
Windows Vista
Windows Seven

spikebites - August 21, 2011, 9:15 pm

Wow, why not just throw Windows 3.1 and Windows 2.0 and MS-DOS 7.0 in there.

thenewestguy - August 21, 2011, 9:18 pm

Because bifrost can infect all these systems (vista and seven x64 are unhackable through bifrost but so)

SpLitD - August 21, 2011, 9:19 pm

Why bother what percentage of peeps run out of date OS why go through the coding work for a OS that is completely obsolete between 7 and XP you have 95% of OS online

spikebites - August 21, 2011, 9:20 pm

wait so are you promoting bi-frost? or are you trying to find a replacement for bifrost?

thenewestguy - August 21, 2011, 9:21 pm

Replacement my old bifrost cant handle windows 7 anymore

Magicpacket - August 21, 2011, 9:22 pm

Pretty useless honestly what systems use

Windows 95/95B
Windows 98/98SE
Windows ME
Windows NT 4.0

No point infecting them they would probly be some foreigner, with a crappy PC!

Who cares? No one uses those systems anyways.
If you want replacement, then use Darkcomet.

Skittles - August 21, 2011, 9:28 pm

Lol i love new members on this site you guys really make this site what it is :)

thenewestguy - August 21, 2011, 9:30 pm

Dark comet is heavy, novalite is bugged and xtreme rat is made by a backdoorer, idk where to go

spikebites - August 21, 2011, 9:40 pm

the new xtreme rats arent backdoored.

thenewestguy - August 21, 2011, 9:42 pm

Prove it, anti-emulation codes and fud servers are so easy to find, and once a backdoorer, always a backdoorer.
