Thread: [Pandorum Progress Thread](#)

Orgy - August 22, 2011, 10:45 am

So as some of you know, aadster and I have been working on a web-based AIO that we're calling "Pandorum"

This thread will basically be just to post updates and let users post suggestions.

Right now all we really have finished is the Java Driveby Generator ([Click to View](#))

[img]http://img810.imageshack.us/img810/8100/ss20110822133946.png[/img]

However, I still need aadster to come online and reupload the latest executable of the generator that this application connects to. Once he's done that, I'll show a screenshot of the output box.

I'm currently working on the Booter ([Click to View](#))

[img]http://img849.imageshack.us/img849/3315/ss20110822134056.png[/img]

[img]http://img845.imageshack.us/img845/5158/ss20110822134122.png[/img]

So far, very little of the booter is actually done. All lifetime customers of twBooter web version will receive the booter service for free.

It will feature quite a few never-before-seen tools that I'm sure customers will love.

As for pricing, we're not sure yet. Users will be able to purchase specific services of the AIO if they don't want the entire AIO. However, those that do purchase the full service will of course receive a discount.

We will not be selling any lifetime services.

And yes, I will be posting the link on Booter Down, in case you think I'm doing Booter Down solely to help my own sales.

Peroxide - August 22, 2011, 10:46 am

Looks great! good luck with this, do you have a eta on completion & price <3?

Baker - August 22, 2011, 10:48 am

Wow . That looks amazing . How much would you looking to sell for ? I would be very interested .

Cerebro - August 22, 2011, 10:48 am

"And yes, I will be posting the link on Booter Down, in case you think I'm doing Booter Down solely to help my own sales."

Haha Looks amazing, will you be posting a checked shell count when its released?

Orgy - August 22, 2011, 10:49 am

(Aug 22, 2011 10:46 AM)Haze. Wrote: [\[CITE\]](#) Looks great! good luck with this, do you have a eta on completion & price <3?

Unfortunately, we currently do not have an ETA. We may begin selling some of the individual

services as soon as they're completed and ready to help pay for the server and firewall bills while we finish complete development.

Since we're coding every bit of it from scratch, I can only imagine that it won't be completely ready for a couple months.

(Aug 22, 2011 10:48 AM)Cerebro Wrote: [\[CITE\]](#) "And yes, I will be posting the link on Booter Down, in case you think I'm doing Booter Down solely to help my own sales."

Of course I'll be posting a checked shell count, and shells will be checked every hour.

ngrasshole - August 22, 2011, 10:50 am

the only shame in this is that I believe other than the panel its coded in C# :[

Cerebro - August 22, 2011, 10:51 am

That a boy. There needs to be one good booter doesn't there?

Orgy - August 22, 2011, 10:52 am

(Aug 22, 2011 10:50 AM)Hanoz Wrote: [\[CITE\]](#) the only shame in this is that I believe other than the panel its coded in C# :[

Partially true, but when time permits we'll be recoding it in C, though I have no idea how far out that ETA is. aadster mentioned the WTFUD crew wanting to get in on the Crypter portion, so hell it may even end up being in ASM. Only time will tell.

(Aug 22, 2011 10:48 AM)Baker Wrote: [\[CITE\]](#) Wow . That looks amazing . How much would you looking to sell for ? I would be very interested .

Again, I'm not sure on the pricing yet.

(Aug 22, 2011 10:51 AM)Cerebro Wrote: [\[CITE\]](#) That a boy. There needs to be one good booter doesn't there?

:) Of course. Just remember, it won't just be a booter

El Swag Loco - August 22, 2011, 12:18 pm

That AIO is like everything that makes me jizz all in one o.o do i smell a mangasm in the near future?

MonkeyBalls - August 22, 2011, 2:10 pm

Calling a java applet a Java driveby is like driving up to someone in a blacked out Mercedes, rolling down the window and asking politely if you can shoot them.

n0pcode - August 22, 2011, 2:11 pm

(Aug 22, 2011 02:10 PM)MonkeyBalls Wrote: [\[CITE\]](#) Calling a java applet a Java driveby is like driving up to someone in a blacked out Mercedes, rolling down the window and asking politely if you can shoot them.

That's the beauty of it, all the old aged pensioners will say 'Yes'.

Orgy - August 22, 2011, 3:08 pm

God the knowledge of people on HF is so warped.

Not only is IP spoofing not the only form of protection, but it would be useless for this. I'm sure you know that it would make running a web server impossible due to the inability to complete the TCP Handshake, since the client would be sending packets to the wrong server. :)

MonkeyBalls - August 22, 2011, 5:25 pm

(Aug 22, 2011 05:23 PM)Orgy Wrote: [\[CITE\]](#) Not only is IP spoofing not the only form of protection, but it would be useless for this. If you believe someone has created a 'crypter' in ASM this proves how ridiculously fucking dumb you are. Ask anyone who has bothered to create something simple in ASM (I'm not one of them, but I understand the time-frame of such project). You might fool some of the kids reading your thread but don't talk absolute shit and insult peoples intelligence. And wtf are you on about MSL? I use MSL to find exploits within for example SQL, as it is compile-free and you can run the script as soon as you have wrote it (like perl, but faster to run scripts).

Orgy - August 27, 2011, 2:39 pm

Haha. You still don't realise how dumb your comments are do you? I'll wait for somebody else who knows what they are talking about interrupts me and puts you in your place.

But if anybody buys your product and believes the shit what comes from your mouth they deserve all they get.

ngrasshole - August 27, 2011, 2:50 pm

(Aug 27, 2011 02:44 PM)[CX]Luke Wrote: [\[CITE\]](#) Ive coded my own OS in ASM, do you believe me? You dumb cunt lol.

Do you believe they have coded a crypter in ASM without auto converting c/cpp code? If so I have no more words to explain how fucking dumb you are.

Are you a wizard? Now really, what is so hard about coding a crypter in asm? Having written one myself using the "LoadEXE" method it was nothing hard... You are fighting over nothing, and if you really coded in asm, you would understand its not hard at all.

You are one of the most retarded people on the internet. ;)

Orgy - August 27, 2011, 2:50 pm

And if you really understood ASM(I don't know how to code alot in ASM, but I know more than somebody who claims to knows how to create a crypter).

Ok please explain what the 'LoadEXE' method entails. In others words you have copied something from google which does alot of it for you?

ISO - August 27, 2011, 2:57 pm

This looks amazing , orgy is a very good coder .
I'm waiting for the best !

Create a process in suspended mode. make some room for your byte buffer (of the file), write your sections into this allocated memory, set the thread context to the entry point of your byte buffer, resume the thread. was that hard? You probably refer to this as the "RunPE" here on HackForums.

Orgy - August 27, 2011, 2:59 pm

Clearly you have no understanding of the windows architecture. What makes this method different if it was performed in asm? then say with C++? ?

[CX]Luke - August 27, 2011, 3:25 pm

(Aug 27, 2011 03:19 PM)ngr Wrote: [\[CITE\]](#) Clearly you have no understanding of the windows architecture. What makes this method different if it was performed in asm? then say with C++? ?

You are not fucking listening are you? I didn't say anything about c/cpp I said it wasn't coded in ASM, which it wasn't.

When at all did I say that it wasn't coded in C/CPP, that is very believable, but to belive somebody created a crypter in ASM is just utter bullshit. They would not be on this site if they could.

ngrasshole - August 27, 2011, 3:31 pm

Still question dodging, you have proved you are idiotic. Now time for bed bye, enjoy sucking off

Orgy:)

kript0x: Another one of Orgys boyfriends, HF is full of them!

Orgy - August 27, 2011, 6:04 pm

I guess people just flock to the more intelligent users

Rowdy - August 27, 2011, 6:15 pm

[CX]Luke where ya been brother! I meessed you!

? **Lollipop ?** - November 7, 2011, 7:28 am

Just thought I would bring this back up for you to see, What's the progress on this ?

Orgy - November 7, 2011, 8:15 am

Well, I'm actually pulling in a new set of people to work on it, because Aadster hasn't seemed to want to work on it. I've been needing to fax some information to my registrar but I haven't gotten around to it yet. The crypter is currently being coded in C++, so it'll have no deps

ISO - November 7, 2011, 9:21 am

As always I think we'll have a good product .Orgy is a very good coder.

I can make vouch copy if you want .

Good lucks for coding anyway !

? **Lollipop ?** - November 7, 2011, 10:17 am

(Nov 7, 2011 09:15 AM)Orgy Wrote: [\[CITE\]](#) Well, I'm actually pulling in a new set of people to work on it, because Aadster hasn't seemed to want to work on it.
