PasteBin Info App

Spoiler ([Click to View](#))

[img]http://simranuploader.com/dl/4e53068476204-Test.PNG[/img]

*What is this ?

I was bored, so I made this. I wanted to do this in C#, but I was too lazy, so I did it in VB.NET :S
Anyways, you paste in a PasteBin Paste URL and it gets the Info using a Regex. Yeah not so hard, but I thought it was cool(While I was high lol)

**REQUIREMENTS:Microsoft .NET Framework 4.0+ or Mono v1.2.6+

Widow's Peak - August 22, 2011, 6:51 pm

Thanks for making this. It should help a lot of people that are learning.

Deceptive - August 22, 2011, 6:52 pm

Good idea, although I think there is an API for doing this, but you did it the difficult way xD

Apple - August 22, 2011, 6:52 pm

I just want to say that you wasted your time (using regex, that is) to make this program, as pastebin already provides a [raw data](#) function.

I can see you using it to teach other people regex, though.

I did use the raw data function to get the data. And btw it wasn't a waste of time, for me that is. I guess I code shitty when I'm high :S

Oh, okay. I assumed you use regex for the entirety of the program. My bad.

It's cool. You know, me and you are cool :P

Armour - August 22, 2011, 7:10 pm

Thanks for making this, it should help me because i'm still learning :D

Marketplace - August 22, 2011, 7:11 pm

This is a good release. I love how you layed out the program

API doesn't list anything about retrieving pastes from a URL, just how to list them from a specific user. Unless I missed it.
