Thread: [I am KEYLOGGED by myself or someone keylogged me!! NEED HELP A.S.A.P](#)

bugme - August 22, 2011, 11:59 pm

Hello, I am very sad my malware bytes says someone is trying to connect to chrome.exe. The keylogger IP : 109.232.225.175

I have team viewer :C I need help from a pro :C

And also Rin I kinda tested your keylogger and now my computer is fucked up :C

Xenochrist - August 23, 2011, 12:06 am

Hey, this is probably the wrong place to post this! The guys at this sub forum will be able to help you out more.

[Malware, Rat, and Virus Removal](#)

More specifically, read this!

<https://hackforums.net/showthread.php?tid=686926>

Good luck!

bugme - August 23, 2011, 12:08 am

Please anyone help me? I only downloaded hacks from hackforums :C

This happened when I was testing Rin keylogger with all of the disable options checked.

I removed the virus but the effect is still happening

Who is 109.232.225.175? NEED HELP :C I cant even open my own folder cause of the effect.

WHEN I OPEN A FOLDER THIS COMES UP "This operation has been cancelled due to restriction effect on this computer. Please contact your system administrator."

I AM THE SYSTEM ADMINISTRATOR..I cant even open a file please help me I am really crying....

Yeah T-T I ran a full scan with malware bytes still found nothing.

CGŠŠ - August 23, 2011, 12:09 am

IP address [?]: 109.232.225.175 [Whois] [Reverse IP]

IP country code: NL

IP address country: ip address flagNetherlands

IP address state: Zuid-Holland

IP address city: Rotterdam

IP address latitude: 51.9167

IP address longitude: 4.5000

ISP of this IP [?]: Server Boost B.V.

Organization: Rotterdam - SmartDC datacenter

Host of this IP: [?]: froyo.flexihostings.net[Whois] [Trace]

Local time in Netherlands: 2011-08-23 09:08

Xenochrist - August 23, 2011, 12:10 am

Did a quick Google search of the IP "109.232.225.175" .. I guess it's from Netherlands? Is that where you're from?

http://www.ip-adress.com/ip_tracer/109.232.225.175

enforcer78 - August 23, 2011, 12:14 am

go [here](#) read and after you have read it make a thread with your problem [here](#)

bugme - August 23, 2011, 12:18 am

Thanks for replying :D I am just 12 so I dont know much. Gonna be a fulltime hacker.
So, back to the point. I am from Malaysia. The youngest hacker in malaysia.

The ip is keylogging my chrome.exe but it cant cause my malware bytes is blocking it.

Uhm.. Can anyone team view with me?

I cant open a folder example when I open a folder this comes up."This operation has been cancelled due to restriction effect on this computer. Please contact your system administrator." I also keylogged my self and deleted the virus but I cant restore the disabled access I can enable task manager but cant enable gpedit.msc

Tempeoryaccount1243 - August 23, 2011, 12:19 am

It's ok that your keylogged your self wont cause much damage.

If you keylogged yourself You can deleted yourself from it.

Now if you don't know how to please check out the white hat section of HF.

-Love Killerpop89 Hoping to get my account back soon :)

bugme - August 23, 2011, 12:23 am

I already read the post and I posted in the section :C btw the ip is connecting to me .. It says outgoing port what does that means?

@Killerpop89

I deleted my virus but a different IP IS CONNECTING TO ME FROM NETHERLAND.

I cant restore the disabled access yes I am my system admin.

Trybbox - August 23, 2011, 12:33 am

Are you sure it's a keylogger?

What does IP Protection do?

Quote:"IP Protection provides an additional layer of security for your computer, by preventing access to known malicious IP addresses and IP ranges, for example, NetDirekt, which is host to the Internet Service Team."

You can find it here: <http://forums.malwarebytes.org//index.php?showtopic=21076>

bugme - August 23, 2011, 12:44 am

Trybbox, wait thats not a keylogger... Sometimes when I click a link the popup that shows the ip comes out from malware bytes.btw non of my account has been hacked. I just need to enable all the access that my keylogger disabled. but I dont know how. Can you teamview and help me?

It only happens when hackforums is turned on. Is there any malicious activity going on here? I mean like is hackforums being sql injected?

The only thing I need to do to make me stop crying is to turn on all the disabled access cuz I cant even open any folder.

Thanks for making me not scared.

Removed the keylogger. anyone can team view me and help me enable all restrictions?

I am also learning how to make keylogger but I cant access any folder or files...

I hope you guys can help me so I can repay you guys with giving you guys some free keylogger :D
FUD FTW!

BTW THE WARNING OF THE IP STOPPED!!!

Hacker is roaming on hackforums

btw Thanks to my noob hacking..I got more time to study and If i get 5 A I WILL GET AN
ALIENWARE! not gonna download rats,keylogger on it though

But my bro is gonna use this computer once i get my alienware so PLEASE HELP ME :C Its not a
major problem I can wait cause Its just restriction.. I cant off my computer cause my shutdown
button is gone. RIN KEYLOGGER DESTROYED MY COMP!! I WISH SHE HAD A CURE THAT
UNRESTRICT EVERYTHING.

NEED HELP!! PLEASE

There were malicious activity at Rin's Keylogger anyone please help me to enable all disabled
restriction made by rin's logger. I was testing my server.exe lol - Thanks in the future.

Kom - August 23, 2011, 1:29 am

First, Malware bytes does that with ads and such.. It does it a lot with skype as well, I don't
recommend keeping malware bytes running all the time but using an actual antivirus software such
as Avast or Avira.

As for testing the logger on your self with the settings that disable your things.... Why? Thats all I
really have to ask... Why would you do something like that?

What operating system are you on? Have you bothered to search for how to enable the features
again? I did a quick search and found about 10 tutorials that could help you within 5 seconds...

bugme - August 23, 2011, 1:31 am

I wanted to try if it really disable settings. Thanks for reply :C.

I am using Win 7 x32 bit I hope we can Team View.

Kom - August 23, 2011, 1:36 am

No offense, you got your self into this mess by pretending to be a "L33thax0r" so the best thing to do
would be get your self out of it and actually learn something, maybe like "I won't play with things I
don't know, maybe learn how to use something or learn more on the subject before screwing around
with things"...

Search / google your question, find some tutorials... You can do it, stop depending on other people.

bugme - August 23, 2011, 1:36 am

I need help from more people and yes I did searched but I am 12 so I dont really understand,

Kom - August 23, 2011, 1:38 am

I believe there is an age restriction on the site of 13 and older so you shouldn't be here? I could be
wrong though, in which case ignore that.

If you don't really understand why are you messing around with things you don't understand? Start
searching and learning how to do things... your not going to learn if someone just does it for you.

bugme - August 23, 2011, 1:40 am

and All of the tutorial uses gpedit.msc not all. If i open it this comes up group policy object on this
computer.

You dont have the appropriate rights. I know I am not a l33thacker and I was dumb. But I have
learned my lesson to never open a server.exe that will disable all settings. So please I hope you can

forgive me for pretending.

Kom - August 23, 2011, 1:44 am

Personally I really don't care if you were pretending...It doesn't effect me at all because I actually know my stuff.

You're going to learn now though, you got your self into shit so you should get your self out of it. There are different ways to do things, in the time it took you to respond I found 2 others.

bugme - August 23, 2011, 1:45 am

Dude please help me...Forgive me....I promise to join this site when I reach 13.. Btw I also know a little of hacking but know nothing about technical stuff so yeah thanks.

Can you please give me the link.. I promise to not mess with pros

Kom - August 23, 2011, 1:48 am

What do you know about hacking, I'm curious... Other than using other peoples programs to "Hack"?

bugme - August 23, 2011, 1:52 am

hmm I use vb6 or vb 2008 and vb.net to make some keylogger but I try people keylogger to get some idea for mine.

But i cant even turn on vb6,2008,.net... cause I HAVE the error... Restriction blah blah blah.

Kom - August 23, 2011, 1:56 am

You mean you copy paste other peoples code to make a keylogger?

bugme - August 23, 2011, 1:57 am

Hey I found a fix

<http://pcsplace.com/windows-xp/how-to-fix-this-operation-has-been-cancelled-due-to-restrictions-in-effect-on-this-computer-please-contact-your-system-administrator-error/>

But how do i open the add/remove snap-in dialog box :C

No.. I am just finding idea.. Like what to add to my logger :d

Kom - August 23, 2011, 2:00 am

and how did you program your logger? Highly doubt from scratch. In either case that's more programming than hacking.

bugme - August 23, 2011, 2:02 am

Its kinda a basic keylogger thats why I dont release it on hackforums.

Kom - August 23, 2011, 2:03 am

Really, how does it work? How do you catch keystrokes?

bugme - August 23, 2011, 2:04 am

I am kinda busy finding a fix. Can you help me?

I dont understand how to open the add/remove snap-in dialog box in mmc.exe

OMG IF I CAN DO THAT ALL OF MY PROBLEM WILL BE FIXED!

OMG DUDE I QUIT AT MAKING HACKS!! I CANT FIX THE FUUCKING PROBLEM

Kom - August 23, 2011, 2:07 am

lol if you can't figure that out I highly doubt you know anything about computers... Meaning you know

nothing about hacking and you didn't program your own logger.

Good luck though, it's not that hard. Took me about 10 seconds to do all this on a VM.

bugme - August 23, 2011, 2:11 am

Well I am 12. Why are you so mean?

Its okay btw. I dont need someone like you to help me coz you are even mean to a hackforums member who dont know how to fix technical issue...

And btw I thought you are support feather? You are just a support fucker anyways

You helped so many member but me..IDK what happened to the pro HackForums god

Thanks for nothing.

I hope you will change your attitude.

Kom - August 23, 2011, 2:16 am

It's not an issue, it's a problem you got your self into by pretending you were cool so you could impress all your little friends at school... it's actually quite pathetic, and now you sit here because you fucked up, begging someone to fix it for you... to be completely honest, you wanted to fuck around with the things so learn how to fix it. It's not hard, you keep bringing up your age...well it didn't stop you when you wanted to fuck around with the programs did it? So it's not a valid excuse. I'm mean because I want you to learn how to fix your own fuck up and not rely on others to spoon feed you all the time. Not only that but you posted in the wrong section anyway.

I help many hackforum members daily btw =)

bugme - August 23, 2011, 2:20 am

I am just sorry. T-T forgive me?

Too short getting back to find a fix and to follow your advice :D thanks how do I rep you?

Kom - August 23, 2011, 2:22 am

I was going to give you the answer after you at least attempted to learn, but after the last comment this is the last thing I'm going to say on the thread. Enjoy fixing your computer, it's really not hard to enable everything... or you know Hit the file menu in mmc?

bugme - August 23, 2011, 2:25 am

I cant even save the settings in mmc.exe Yeah its fun but look at this

<https://hackforums.net/showthread.php?tid=1470660&pid=14961843#pid14961843>

I enabled all of the blocks so I dont think I can fix it :D Sorry anyways. how do I rep you?

FIXED REQUEST CLOSE!~~`
