Thread: [VPN Downloads & Proxy Servers](#)

iMario - August 24, 2011, 11:38 am

[img]http://i27.lulzimg.com/38e12bc4ae.png[/img] Introduction:

The following thread will show you multiple VPNs with download link and Proxies Websites. These are the best and the most popular one on the Internet.

What is a VPN?

VPN stands for virtual private network. A VPN keeps your wireless communications safe by creating a secure "tunnel," through which your encrypted data travels. These tunnels cannot be entered by data that is not properly encrypted. Not only is data encrypted when you use a VPN, but the originating and receiving network addresses are also encrypted. This adds an extra layer of security.

What is a Proxy?

Proxy sites enable you to bypass your own Internet provider and browse through the proxy web site. All that you have to do is type the web site address you would like to visit in the form they provide, and start browsing. Once you keep browsing using that form, you are protected and your real IP address is not being logged.

Index:

[VPNs List](#)

[VPNs List \(Continue\)](#)

[Active Proxy Websites](#)

iMario - August 24, 2011, 11:39 am

[img]http://i27.lulzimg.com/18a6e20a1d.png[/img]

This VPN list include paid VPNs and free VPNs. Paid VPNs are better than free VPNs because they have more features, they are more secure, they mostly don't keep logs, they are faster and way more reasons.

StrongVPN

[img]http://www.strongvpn.com/sites/all/themes/strong/images/logo.png[/img]

Click on the picture to access their official website.

Strongvpn.com / Reliablehosting.com started as a computer system integrator in South Lake Tahoe in 1994 with a small staff. We moved from various colocation facilities in Northern California until we settled at 200 Paul Exchange Colo now run by Digital Realty Trust. This facility offered us a ideal location for peering and growth ability.

We have been able to steadily grow our customer base by understanding a fundamental rule in regards to business. There is no way to truly grow a hosting business on product and price advantage alone, the most important factor to a successful business is a strong customer service

culture.

## ExpressVPN

Click on the picture to access their official website.

Unblock websites and applications restricted by your country, ISP or company

Free up your Internet! No restrictions whatsoever. Some countries are notorious for controlling the content users can view or monitoring their online activities. If you care about your online privacy and freedom, ExpressVPN is an excellent solution. Unlike your ISP, we do not log and track the websites you have visited.

### Secure and Anonymous Internet

Every time you visit a new website, you are exposing yourself, leaving a digital fingerprint in the form of an IP address. A hacker may use this information to try to access your computer's files or steal your passwords. By replacing your IP address with ours, ExpressVPN protects your identity and allows you to become anonymous.

### Encrypt your data

ExpressVPN encrypts all data you transmit over the Internet via an encrypted secure virtual tunnel between your computer and our servers. This provides a protective shield to your computer because you are accessing the Internet securely through a guardian third-party. Think that slows down your connection? Actually the encryption/relay process takes just milliseconds, and many international websites tend to load faster than before.

### Works with Wi-Fi and when you travel

When you connect to the Internet via an unsecured wireless connection, such as a Wi-Fi hotspot or hotel, your important emails and passwords may be getting broadcast publicly through the airwaves for anyone to see. ExpressVPN is ideal for anyone who travels (or works from coffee shops) because it works in any location and encrypts all data transmissions for your security.

### Simple and seamless

Follow the easy setup steps on our website, and you'll be up and running in minutes. You don't need to change your ISP. ExpressVPN works seamlessly with all web browsers and applications. You never have to visit a slow web proxy again. Just use the Internet as you normally would with ExpressVPN running in the background. Enjoy your Internet with freedom, security, anonymity and reliability. That's Internet the way it's meant to be.

### Setup on as many computers as you like

You can configure ExpressVPN on as many computers as you like, though only one of them can be connected to the VPN at a time. If you'd like more than one to be using the VPN simultaneously, you should get an additional account. We suggest you try it out first, then get more accounts as needed.

## nVpn

[\[img\]http://nvpn.net/images/logo.png\[/img\]](http://nvpn.net/images/logo.png)

Click on the picture to access their official website.

- [www.nVpn.net](http://www.nVpn.net) - provides a secure and private connection within a public network (e.g. the Internet). This connection is obtained through a method, called tunneling, where the data to be transferred is broken up into smaller 'packets' encrypted and are subsequently sent through the virtual tunnel created. This is NOT to be confused with a proxy service which is used to view websites only. We provide a secure 1024 bit encrypted connection to our servers located all over the world and all traffic is directed through them. PLEASE NOTE: that if you do choose to use one of many free proxy services there is a great chance that your credit card and/or passwords will be subject to fraud because they log your activity!

With nVpn.net you can anonymize and encrypt your entire Internet activities. Regardless, whether you like to simply browse, keep a blog, write e-mails / ftp, run a business, transfer money, download images, exchange files or chat, you will always be unobserved and safe.

Benefits of using nVpn

Provides a layer of security and anonymity

Bypass your ISP restrictions

Protects you by hiding your real IP address

We give you a new IP address

Secure connection between your PC and the Internet (1024bit)

Use Skype, Yahoo and Google Talk in Middle East and Asia

Visit censored/blocked websites in Thailand, Qatar and many more

Your office/school cannot monitor your activities

Access poker/gambling/adult sites anonymously from anywhere

Choose your IP address and with this the GEO Location based on your likes

You want to appear as example as a Russian citizen ? No problem with us !

User Interface Picture ([Click to View](#)) [OpenVPN Client Order Here \(Windows, Mac, Linux, iPhone, Xbox 360\)](#)

=====

## HideIP VPN

[\[img\]http://www.hideipvpn.com/wp-content/themes/hideipvpn/i/logo.png\[/img\]](http://www.hideipvpn.com/wp-content/themes/hideipvpn/i/logo.png)

Click on the picture to access their official website.

Why should you use HideIPVPN?

Your IP is hidden while using HideIPVPN. Make your traffic appear to originate from United States, United Kingdom, Netherlands, Germany or Canada. Access sites like Hulu, Pandora, ABC, NBC, BBC iPlayer, ITV.

Why VPN?Provides a layer of security and anonymity

Protects you by hiding your real IP address

Secure connection between your PC and the Internet (128-2048bit)

Access sites restricted to US and UK residents

Anonymous Internet Surfing

Security for Hotspot Wireless Access Users

Unblock all VOIP Applications include Skype

[censored] VPN

[\[img\]http://cyberghostvpn.com/templates/cg2011/img/bg-logo.png\[/img\]](http://cyberghostvpn.com/templates/cg2011/img/bg-logo.png)

Click on the picture to access their official website.

[censored] is an important tool for protecting your privacy. [censored] VPN replaces the externally visible IP address, which users have received from their provider when they dial up to connect to the Internet, with a [censored] VPN IP address. The [censored] user shares this IP address with a number of other users. This procedure ensures that the [censored] VPN IP address should not be assigned to one particular [censored] VPN user.

Communication between the [censored] VPN user's computer and the anonymization servers is also particularly well protected to prevent any eavesdropping on data transfers. This protection is set up in 2 steps when establishing the connection. 1024-bit SSL encryption is used when establishing the connection. In this case, a 128-bit AES key is negotiated, which is unique for each connection. The actual communication takes place via this AES key.

Hotspot Shield

[\[img\]http://hotspotshield.com/images/hss-logo.gif\[/img\]](http://hotspotshield.com/images/hss-logo.gif)

Click on the picture to access their official website.

Hotspot Shield protects your entire web surfing session; securing your connection at both your home Internet network & Public Internet networks (both wired and wireless). Hotspot Shield protects

your identity by ensuring that all web transactions (shopping, filling out forms, downloads) are secured through HTTPS. Hotspot Shield also makes you private online making your identity invisible to third party websites and ISP's. Unless you choose to sign into a certain site, you will be anonymous for your entire web session with Hotspot Shield. We love the web because of the freedom that it creates to explore, organize, and communicate. Hotspot Shield enables access to all information online, providing freedom to access all web content freely and securely. Secure your entire web session and ensure your privacy online; your passwords, credit card numbers, and all of your data is secured with Hotspot Shield. Standard antivirus software protects your computer, but not your web activities.

proXPN

[img]http://proxpn.com/m/images/logo.jpg[/img]

Click on the picture to access their official website.

Security

Keep yourself and your family safe from modern threats such as credit card fraud and identity theft.

Military-grade high-bit encryption

Your internet connection is cryptographically secured from prying eyes

Privacy

Reclaim your right to privacy. proXPN makes it nearly impossible for people to determine your identity, location, or activity online. Your private information stays private

Secure connection to all websites and services, from Facebook to online banking

Email cannot be viewed in transit through the proXPN network

Instant messaging chats cannot be intercepted via the proXPN network

Internet activity (web browsing, online applications, etc) cannot be tracked by your ISP

proXPN's public IPs ensure that your real IP is hidden and impossible to uncover

Ease of Use

proXPN is simply the easiest to setup VPN in the world. Quick installation and setup on your computer

User friendly application keeps you in control

Performance & Technology

Take advantage of the exact same security technologies employed by Fortune 500 companies and government agencies. Proven VPN technology standards

VPN connection tunnels all of your traffic through encrypted connection through VPN servers, then out to the internet

Our VPN servers offer a 99.99% uptime guarantee

Mobility

proXPN is fully compatible with all smart phones that support PPTP VPN service. Connect from anywhere securely and safely

Works with iPhone, iPod Touch, and Windows Mobile

## TheGreenBow VPN

[\[img\]http://www.thegreenbow.com/images/logo\\_vpn.jpg\[/img\]](http://www.thegreenbow.com/images/logo_vpn.jpg)

Click on the picture to access their official website.

### Remote Access Needs

Your network is constantly evolving as you integrate more business applications and consolidate servers. In that environment, it's therefore becoming extremely complex to maintain total security at the network's edge while employees, subcontractors either at home or at the office, are working with customers and partners. They need to have remote access to the company's applications and servers quickly, easily and securely.

### Presenting TheGreenBow IPSec VPN Client

TheGreenBow IPSec VPN Client software is an on demand IPSec VPN Client providing remote access, compliant with most popular VPN gateways and with network tools to deploy security in large and medium enterprises. Highly efficient and easy to configure, the IPSec VPN Client software also allows peer-to-peer VPN.

## Tor

[\[img\]http://www.torproject.org/images/tor-logo.jpg\[/img\]](http://www.torproject.org/images/tor-logo.jpg)

Click on the picture to access their official website.

Tor is a network of virtual tunnels that allows people and groups to improve their privacy and security on the Internet. It also enables software developers to create new communication tools with built-in privacy features. Tor provides the foundation for a range of applications that allow organizations and individuals to share information over public networks without compromising their privacy.
