Thread: [Setting up VPN server on my Dedicated server \[WINDOWS\]](#)

Releases - August 25, 2011, 5:03 am

So I need a little help here.

Currently renting a Windows server 2008 Dedicated server, going to give some vpn logins away connected with this server.

Which software should I use to make this happen and which do you prefer?

I appreciate if somebody can put me in the right direction..

OpenVPN is a nice one, not much software needed to be installed. Or you can just do PPTP.

Releases - August 25, 2011, 5:07 am

What do you prefer and what is the most stable Cerebro"?

Cerebro - August 25, 2011, 5:44 am

OpenVPN in my opinion is most stable but, the software which needs to be installed on the clients PC is limited to Windows (as far as I know) Other programs are available for other OSs but its a bit of a hassle. Therefore as PPTP is built-in to almost every OS made, it would make it a lot easier, client side of course. However regulating it and bringing up statistics etc would be easier in OpenVPN. Its your choice.
