Thread: [What is difference between scan time and run time scan ?](#)

rubanrecobath - August 26, 2011, 6:40 am

Hi hf friends...

Sorry for this Worthless question...

Please any one tell what is the difference between scan time nd run time scanning ?

Thanks in advance...

TickTockMan - August 26, 2011, 6:42 am

It would help if there were some context to that question. Are you talking about a particular application?

E V O - August 26, 2011, 6:55 am

Scantime = when the AV scans the file (and doesn't find any detection for example)

Runtime = when the program is running (and the AV detects it's actions for example)

Basics. - August 26, 2011, 6:59 am

Scantime is when an AV is scanning a file. If there is no detections, you say it is 0/32 SCANTIME

Runtime is when a program is being used, and while being used, an AV scans it automatically. If it does not detect it, you say it is 0/32 RUNTIME.

now i got it...

thank you so much guys...

Yeah this is correct definition of scantime and runtime.

Thanks evo
