Thread: [whatcha think ? - Keypool for a crypter](#)

**ICODE** - August 28, 2011, 2:34 am

[img]http://screensnapr.com/e/URO9NS.png[/img]

i saw someone throw the idea out for a swf as a form background but what about a keypool ? So i wound up doing a keypool out of it, think it would be cool in a crypter perhaps ?

<http://neave.com/imagination/>

from the site above.

- the left is the image`s hash basicly, the image has a shitload of data so you can get a longer key.
- the above is the image at the point the mouse was lifted, picturebox was only to show the bitmap to you guys. nothing major just curious if its worth posting source for.

**BreastMilk** - August 28, 2011, 2:37 am

Yea, i can imagine some people would use this.

- I am interested in having a look m8, im still learning and would like to test.

Can u grad the source or bin to try out? ?

Nice work :)
