Thread: [System32 files changed](#)

secret_agent - May 8, 2008, 12:42 pm

So you been b*tching and crying just becaused Kernel32.dll or shell32.dll or so on have changed? This might be due the microsoft update, if you own an avg anti-virus, it tend to tell you that. No big deal, you should be rejoicing that those files (Kernel32.dll,shell32 etc) is not infected.

Get fed up of seeing it every time you scan your computer? Well heres a little tip for you. Open avg test center then click Scan System Areas afterwards press f3 and confirm it. Hurray avg will never show kernel32.dll is changed again only if its infected.

****COMING BACK WITH NEW DETAILS ON HOW TO FIX THOSE FILES******

He said decent OS, not a Mac...

Jimmie - May 17, 2008, 7:43 am

lol

macs seem to be for lil kids

XP regular people

linux advanced users
