iDope -- - August 28, 2011, 8:52 am

I am here to present to you guys something I've been working on since almost 2 months now. It is an AIO. The basic GUI has been coded in Visual Basic 6. And the other stubs are coded in C++ and ASM.

Information about the AIO:

The AIO has been worked on for around 2 months+

I have a real job as a Android Developer in a HUGE software firm and yes, I do get paid well enough so I can support my family. But since I have been learning a LOT at office, I thought I'd give something back to the place where I started to learn programming. And so I started working on this project from scratch working towards a steady and stable product for the market. I started with making a simple File Binder whose stub was coded in ASM at first, but then I ported it to C++ as well. But now, it is a COMPLETE AIO with all features that you need daily.

So you can pretty much be sure that the product is NOT going down from the market in a weeks time. It is here to stay for 10+ months. That is what I have decided for now.

STUFF INCLUDED IN THE AIO

Crypter. (Stub coded in pure ASM)

Standalone Multi File Binder. (Stub coded in C++)

Standalone File Information Changer and Icon Changer.

A Stealer. (Coming Soon in like a weeks time)

A Multi File Downloader. (Stub coded in pure ASM)

Basic Info:

GUI coded purely in Visual Basic 6

All stubs are coded in C++ and ASM.

All of the options in the AIO do NOT require ANY type of external dependency.

The AIO is intended to be used for professional use ONLY.

Features:

The AIO has

All stubs are coded in C++ and ASM.

All of the options in the AIO do NOT require ANY type of external dependency.

The AIO is intended to be used for professional use ONLY.

Screenshots:

Spoiler ([Click to View](#)) Coming Soon...

I will post the Sales thread in the Premium Sales Section in a bit. This is going to be the main discussion thread.

I don't really know why but I just laughed my ass off at your post.

And fr4g last time I saw you, you were repfucked. Good too see that your rep is back up. Anyway, it will be nice to see a AIO in c++ for once.(instead of dotnet :P)

iDope -- - August 28, 2011, 9:10 am

Thanks a lot Zincco. I've been off HF for quite a lot of time. Haven't posted in over 2 months now..Barely 2 posts or something. Never get the time to do so... Anyway, since I'm only working 6 hours a day from this month end onwards, I'm gonna get more free time on my hands, hence the product.

iDope -- - August 28, 2011, 9:16 am

Sorry for those typos. I've used a very old thread layout for the old crypter by a friend. I had posted the thread for him, and I though I'd just use the template.

The stub is coded in C++ alone.

Megan Foxxx - August 28, 2011, 9:46 am

Good luck with this,

London AIO was a bitch to code, its about ready now.

Good luck!

DarkDev - August 28, 2011, 9:54 am

It sounds great but haven't you sold like 8 different crypters here already?

ngrasshole - August 28, 2011, 10:06 am

This. Also, if I remember correctly, each and every crypter He sold was either coded in .NET or VB6, and had a lifespan of about 3 days. ?

iDope -- - August 28, 2011, 12:47 pm

To all of those who want to bitch and criticize: You guys can go ahead and do it. I love criticism. And since most of you are sellers over here, you obviously are gonna take me as competition.

And btw, please, while you post, have some strong proofs defending what you claim.

Never did I say I learned C++/ASM in 4 days. I was away from HF for 2 months+ doing my real life job as an android developer. It's pretty obvious you need to learn at least 4 languages to get a job as a programmer in my country. That's the minimum requirement. And since I got C++ as a subject in my High School as well, it really wasn't that hard. And to all haters, and to all who think I'm trolling, it's just your opinion. I don't need to prove it to you guys since I don't even know who the fuck you are. Since I do have respect for ngr since I've seen his products, I'm not gonna say anything to you.

EL01 - August 28, 2011, 2:38 pm

Weren't you the guy that "sold" off his crypter project to some random guy with 10 post, (probably a multiple acc or one of your friends) and then that guy left so "you" wouldn't get blamed for the project dying?

witchitized - August 28, 2011, 2:52 pm

What happened to jLoader?

Just curious.

iDope -- - August 29, 2011, 1:20 am

Just as stated before, I left all of my older projects for my job. It was always my number one priority. and hey, why the hell am I answering the random guy above Autumn?

iDope -- - August 30, 2011, 1:04 pm

Taking up suggestions for any new and simple features you would like to have.

iDope -- - September 5, 2011, 11:57 am

THE AIO has been released, and is up for a grab.

BUy it here:
