Thread: [Fun batch virus! \(No more computer crashing\)](#)

53CUR1TY - August 30, 2011, 5:36 pm

Hey guys, I figured that we needed a change of things. I decided to make a few new batches from DELmE's batch genorator that can be used to screw around and have fun with your friends without causing perminent damage to their computers! So I present to you the batches!

This first one is used to open/close the disk tray nonstop every 10-15 seconds. I like to use this one at school when I am bored ?

Open/Close Disk Tray

Quote: @ echo off

rem --

rem Start Opening Disk Tray

echo Do >> "opendisk.vbs"

echo Set oWMP = CreateObject("WMPlayer.OCX.7") >> "opendisk.vbs"

echo Set colCDROMs = oWMP.cdromCollection >> "opendisk.vbs"

echo colCDROMs.Item(d).Eject >> "opendisk.vbs"

echo colCDROMs.Item(d).Eject >> "opendisk.vbs"

echo Loop >> "opendisk.vbs"

start "" "opendisk.vbs"

rem --

This next one is a blast to use. What this batch does is it swaps the mouse buttons, lol, it is super fun to see people get really confused when their left click isn't really left click ?

Swap Mouse Buttons

Quote:@ echo off

rem --

rem Swap Mouse Buttons

RUNDLL32 USER32.DLL,SwapMouseButton

rem --

Next we have a batch that disables the keyboard, it pretty simple, but fun to see your friends rage because their keyboard isn't working ?

Disable Keyboard

Quote:@ echo off

rem --

rem Disable Keyboard

```

This one is a bit more on the evil side if anything else. What this batch does is disables your internet, which we all know can get annoying when your internet isn't working ?

Disables Internet

rem --

Lastly, if you want to be a real douche to your friend, just spam him with message boxes ?

Spam With Message Box

Quote:@ echo off

[illegible]

Well, there you guys go. Have fun with your friends and don't get caught ?

Also, if anyone gets a chance to test these, please leave a comment if you find anything wrong with them. Be sure to leave a thank you! ?

Zebaas - August 30, 2011, 6:52 pm

Lol? Way to steal this from DELmE's Batch virus Generater. Lol

53CUR1TY - August 30, 2011, 6:58 pm

I suppose I should specify where I made them, but regardless, they were new, and it isn't against the agreement. It states that I cannot sell or trade the batches made. Am I selling? No. Am I trading them for anything? No.

Zebaas - August 30, 2011, 7:39 pm

But you still said you made them, Which you didn't.
Sorry If I didn't specify. Jsut because it is not against the Rights, Doesn't mean you should claim them as your own.
Saying you "Stole" it was wrong. I should've said "You took credits from someone else's Work"

I understand I did that, I made this quickly because I didn't have a lot of time. Thank you for the critisim, it is always accepted. I made an edit to the post.

Zebaas - August 30, 2011, 8:01 pm

Mmkay, That's all I wanted. It annoys me bad, Idk why. Hope we are at peace now. If not, oh well

hackeeblaze123A - August 30, 2011, 8:04 pm

hey dude could you tell me how to make the batch files execute during the start up

Zebaas - August 30, 2011, 8:12 pm

If you have Xp, You could Go to Start Menu > All Programs > Startup.
or
if you have another OS
C:\Document And Settings\%username%\Start Menu

I was never mad, just trying to prove a point like us humans always try to do, anyways, we're chill, don't sweat it.

Zebaas - August 30, 2011, 8:20 pm

Mmkay, Jsut making sure. Sorta new to HF and don't want to be ahted right off the back XD

Wheelz - August 30, 2011, 11:40 pm

I dont think "msg" works on W7 anymore, and unfortunately are school all switched to W7, also how do we end these once we have ran them on there computer, do you have to do it through taskmanager? Ok, shit I accidentally ran the one that switches your mouse buttons, how can I fix this and put my mouse back to normal? You should really post the code that reverses each one of these

Crypto™ - August 20, 2012, 2:37 pm

Too lazy to post all of them, but here's the ones I could figure out.

For the open/close CD tray one, just go to task manager and find the Microsoft Wscript Host (Not too hard unless you're being spammed by message boxes.)

For switching the mouse buttons, go to Control Panel>Mouse And switch the control scheme from left handed back to right handed or vice versa.

Anyways, the easiest way to fix the keyboard is to make a copy of your current keymap in the registry editor.

To re-enable the internet, just go to command prompt and type ipconfig/renew

The best way to stop the message boxes is to shut off the computer. If it's added to startup, just start your computer in safe mode and remove it. I'll leave that up to you to figure out how to do. Anyways, that's essentially it. Hope this helps those poor victims.

tommycake50 - August 20, 2012, 6:53 pm

or for the mouse one just rerun it duh it will reverse the reversing.

Racialz - August 20, 2012, 7:59 pm

I just realized how the batch forum is so full of arguments 0.o

Rageasaurusrex - September 4, 2012, 7:57 pm

Damn thanks for this it is certinaly a good batch script once again thanks
