This is the tutorial for those wanting to print their name on a girls boob.

Introduction:I have seen numerous amounts of people wanting this tutorial done, so i thought why not make one. This easy to follow tutorial will teach you how to print your name on a girl's boob.

Before and After:

Before

[IMG]<http://img402.imageshack.us/img402/6100/camgirl.jpg>[/IMG]

After

[IMG]<http://img717.imageshack.us/img717/7302/camgirlwithtxtontiiiit.png>[/IMG]

Please Note: Yours will look better then mine if you adjust the settings to make the opacity lower.

How you do it

First off open the picture of the girl that you want. Then select the "TEXT" tool. Find a good font that looks kind of home made.

The font i am using is "Candy Round BTN It" font, seems to work very well. Next type in the text that you want and position it on the boob somewhere. Next make sure your text is highlighted, then up above you should see "Warped Text Tool". Click that, next, choose your warp style, for mine i just used "Arc".

Position it good on the boob so it looks as if she just wrote it on herself. After you are satisfied with the position that the text is placed, then select "FX" on your text, at the right hand side at the bottom. You will only need to use the "Stroke" option, and look at the picture below on the settings i have.

[IMG]<http://img683.imageshack.us/img683/508/textfxsettingz.png>[/IMG]

You can mess with the settings accordingly to the color of your girl's skin. Next, click out of the "FX" screen.

Then you want to click on your text, and make the opacity 60% (depends on the color of the girl).

Outro Thank you for reading this tutorial, i hope i helped some. I Know this is an odd thing to do a tut on, but some people requested it. Thanks.

Instead use this font: Viner hand ITC font

Thanks mate, nice and helpful tutorial.

Whiskey - September 3, 2011, 12:03 pm

Okay tutorial but I would also suggest spacing out the text between the font and finding a more messy type font; Nobody could write that perfectly on their own boobs.

Thank you for the feedback. And yes i agree with you, i try'd to find a messy font, but the best one o have found was this.

Has to be black text madness, you wouldn't right white text on yourself and be able to see it would you ? :S

Hook3r - September 3, 2011, 8:34 pm

Its just to get people an "Idea" on how to actually do it correctly. No one i dont think will use this font i am using, therfore it wont look shitty like mine.

DiViiNe - September 5, 2011, 12:07 am

hey bro nice helpful tutorial man...

danbirk - September 6, 2011, 11:32 am

It doenst really look realistic.

Try find some of thoose handwritten fonts.

Find a font that looks alittle messy.

Its easy to spot that what you made is fake.

As i said before this is just an "Example", others will look much better, as i pointed out that they should use the font below my description.

hehe :D the greatest on in this site? Maybe xD Thanks, looks awesome

lalaland6 - *October 11, 2011, 6:36 pm*

I guess you could simply use the Liquify filter to warp the text a bit. Or look up photoshop displacement maps to find how to "wrap" a layer onto another. That works really well for fake tattoos on a curved or wrinkled texture.

Wires - *October 12, 2011, 11:42 am*

Very nice & Detailed Tutorial, im a noob at graphics but it helped alot.
