Title pretty much says it all. All my private dedi's hit above 60k packets per second. In order to get this you must

1st: Post here.

2nd: PM me for the shell url (ub3rs & Leets)

*Regular members download a pass here: <http://fileups.net/0l864R>

then PM it to me and I will hook you up:)

Don't forget to vouch in the thread and say thanks!

No one wants a free private dedi?? come on fellas

No one fuckin wants a way to make a shell because they already know how... Plus your using shitcash links. Who the fuck would fall for this shit? You get paid just so we can make shells that we can already make? I can look up a shell exploiter and the webdav shit and find a download link from MEDIAFIRE.
