Thread: [\[Free\] Fake ID Generator \[FAST\]](#)

Mefjus - September 5, 2011, 8:10 am

Hey Guys!

I was bored so I have coded a Fake ID Generator in JAVA!

[img]http://dl.dropbox.com/u/36363219/fakeid.PNG[/img]

It generates RANDOM user data with:

name

adress

city

phone

born on

email

Bank

bank code number

bank account number

credit card

creadit card number

cvv2

expire date

INFO

Bank accounts / credit cards:

The bank accounts or credit cards are generated by the original algorithm, therefore they are valid if they have them serviced on a website. However, not to say that these bank accounts / credit cards are to be classified persons. That is, the bank accounts / credit cards are valid, but not forgive! So you can't damage the respective bank!

CVV2/CVC code:

It impossible to generate the a CVV2 Code!. So the CVV2 Codes in this program are generated randomly!

PIN and TAN:

The PIN or TAN of an account number is not to generate as well as a CVV2/CVC code. The bank generates this with a secret code and a little-known encryption.

USE THIS ON YOUR OWN RISK!!

Are you sure ? real CC numbers ? I thought it wasnt so easy.. Have you made it?

Mefjus - September 5, 2011, 8:47 am

not real cc numbers but they are generated like the real ones (:
