Thread: [? How to Set up BlackShades RAT | Very Simple Guide | Pics ?](#)

Kappah - September 6, 2011, 6:11 pm

How to Set up BlackShades RAT | Easy 1.2.3 |

Step 1: Get Blackshades

Purchase and Download BlackShades RAT: [4.7 RAT \(Will Auto-Update\)](#)

If you have not yet purchased the BlackShades RAT, please do so, then come back.

[Click Here to Buy](#)

Step 2: Register, and Open Blackshades

Now, open your rar file you downloaded from bshades, and follow this path.

Data > Registrator > Click "Register" > Click "Unicode" (Bottom Left) > Click "Register": Now Exit.

Step 3: Setting up Your Hostname

Next, register an account on [No-IP](#)

Once you've registered an account, go to "Manage Hosts"

Now that you're in "Manage Hosts" click on "Add Host"

Spoiler [\(Click to View\)](#)

[img]http://theimagehost.biz/images/1315352787.png[/img]

Next, you add your host, the only 2 things you should change about the host, is the Hostname, and the "No-IP.biz" extension.

Spoiler [\(Click to View\)](#)

[img]http://theimagehost.biz/images/1315352919.png[/img]

Step 4: Port Forwarding

I will be going over how to port forward a Linksys Router, not any other ones.

If you don't have a Linksys Router, skip this step. You may find these helpful:

[Google](#) // [Youtube](#) // [Search HackForums](#)

Setting Linksys up:

Run the program "Command Prompt" or "CMD"

Now type in this "ipconfig" You should get something like this:

Spoiler [\(Click to View\)](#)

[img]http://theimagehost.biz/images/1315353621.png[/img]

Now, scroll up to where it says "Default Gateway" on the right.

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315353763.png[/img]

Now, type your Default Gateway into your webbrowser's address bar.
It should ask you for a username and password, your default username and password is.
Username:admin
Password:admin

Once you've gained access to the main page, click "Applications & Gaming"

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315354219.png[/img]

Now, we will be opening port 82.
When opening your port, you must know what your "IP Address" is.
Open "CMD" again, and type in "ipconfig", 2 steps before the "Default Gateway" was, the should be IPv4 Address.

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315354534.png[/img]

The last 3 digits is what you're going to need.
Mine is 102, so this is how I would set my port up.

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315354702.png[/img]

Now you've finally made it through the port forwarding step, lets move on.

Step 5: Setting up Blackshades RAT

Alright, now lets set your RAT up.

Click the "Creat Server" tab at the bottom of the program. (No screenshot needed)

Then right click the box on the left of the program.

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315354986.png[/img]

Name the profile what ever you want, I'm naming mine HFDec.

Now, once in there, click ".NET Crypter Settings"

I've already clicked it, this is what the should look like. (Despite the fact it generates random codes)

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315355173.png[/img]

Now, you will have to open another port on your router, go ahead and open port 4444, once you've done that continue on.

===

Alright, here is the stuff I had to set up.

Hostname: hfdeceive.no-ip.biz

Port: 82

Transport: 4444

===

Now this is an example of how mine looks, yours should look similar other than the generated codes.

Spoiler ([Click to View](#))

Now, click the "Save" button, after that, click the "Build" button.

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315355632.png[/img]

Alright, lets move on.

Step 6: DUC & Listen

Alright, lets go back to [No-IP](#) and download the DUC.

Click here for Windows: [Windows Download Link](#)

Click here for Mac: [Mac Download Link](#)

Click here for Linux/BSD/Unix: [Linux/BSD/Unix](#)

Once you've got that downloaded, open the program and sign in.

Then when you're past the sign in page, update your hosts.

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315356190.png[/img]

Now choose your hostname and save it to update.

Spoiler ([Click to View](#))

[img]http://theimagehost.biz/images/1315356335.png[/img]

Alright, time for the final count down.

Go into BlackShades RAT, and click "Settings" at the bottom of the page.

Now choose your ports that you have opened, and have had set up with your RAT.

My connection port was port 82, and my transport was port 4444.

Spoiler ([Click to View](#))

Now, click the "Activate" button by both ports.

Be sure they are open by clicking the "Test Port" button.

If all goes well, you've completed your RAT.

You can build as many RATs using the same information as many times as you want.

If you're wondering where your file to spread is, click the build button again and it will show you where it was placed.

Finished

This was made completely by Deceive, thank the whole Black Knights group for doing their hardest we can to help.

Please report any typo's, or grammar corrections to me in a PM.

badlyfar - September 6, 2011, 6:29 pm

Nice. Although I'm pretty sure that if you buy BS, you know ratting, but it's still helpful.

DragScope is GONE :'(- September 6, 2011, 6:34 pm

thanks for the tutorial, Deceive, it will help many.

Kappah - September 6, 2011, 6:40 pm

(Sep 6, 2011 06:29 PM)badlyfar Wrote: [\[CITE\]](#) Nice. Although I'm pretty sure that if you buy BS, you know ratting, but it's still helpful.

Yeah, buy a lot of time people upgrade from CyberGate to BlackShades, because they are both very popular on HF. That's why I made this tutorial.

#DragScope, thanks bro.

Hope to see more thanks ?

BlackxWaterUSA - September 6, 2011, 6:43 pm

Nice tutorial keep up the good work!

Taktloss - September 6, 2011, 7:00 pm

Just add some words about VPN and that they don't need PFW to work with rats and the tutorial will be perfect :)

With VPNs which have bulletproof static IPs, you won't even need NO-IP or this annoying NO-IP DUC ;)

Bye

Insidious. - September 6, 2011, 7:18 pm

Great Tutorial! Especially from Deceive! Keep it up.

Kappah - September 8, 2011, 1:34 pm

Thanks Weezy, I don't think very many people seen this, or their just not posting :(

If you guys need help with anything other than port forwarding, HMU.

H For Hailey - September 8, 2011, 1:57 pm

Respect towards you Deceive<3 Thanks for Tutorial :3

Kappah - September 8, 2011, 4:25 pm

Thanks Haily, means a lot :)

Again, if anybody needs help, just PM me, l33ts, ub3r,net members, idgaf.

I don't bite :P

Wheelz - September 8, 2011, 4:26 pm

Nice tutorial man, it is helpful for people who have just purchased BlackShades.

American Apathy - September 8, 2011, 4:26 pm

Very nice tutorial sir. I'm buying it tomorrow :p

Kappah - September 10, 2011, 10:51 am

Yeah no problem bro.

Again, if anybody needs help setting it up, just shoot me a PM. ?

formetoknow - September 17, 2011, 5:43 pm

Nice tut, came in at a great time for me as I just purchased Bshades and was playing with it tonight

I am using Bshades VPN, so I am not sure what to put in the IP/DNS, right now I have my no-ip.org name in and ports 3080 and 3081, when I click activate and test, it tells me my ports aren't open :(

Do you know how this is all diff when using Blackshades VPN?

The first time I did active on my port I had a popup from a Windows firewall, so I clicked the "unblock" button, afterwards I went in and turned the windows firewall off

I still have malware bytes running, do I need to turn that off too?

Thanks!

Kappah - September 17, 2011, 5:46 pm

Thanks!

No, Malwarebyte's has nothing to do with it.

Just make sure you're allowing access and your ports are open, if you can't open your ports then you should buy the Bshade Fusion.

formetoknow - September 17, 2011, 5:51 pm

The reason I bought the Bshades VPN is cause they said your ports will always be open and I talked to them on a support ticket a couple days ago and they mentioned that as well, I just must be clicking something wrong

If using a VPN like that, do you put that int he IP/DNS section or do you put your No ip info in?

Thanks

Kappah - September 17, 2011, 5:52 pm

(Sep 17, 2011 05:51 PM)formetoknow Wrote: [\[CITE\]](#) The reason I bought the Bshades VPN is cause they said your ports will always be open and I talked to them on a support ticket a couple days ago and they mentioned that as well, I just must be clicking something wrong

Thanks

You put your No-IP info.

It might be your VPN that is having the problem.

MKIII - September 17, 2011, 6:00 pm

This is a very nice tutorial!
Keep up the good work!

CRT - September 17, 2011, 7:04 pm

Nice tutorial, already knew how to set this up correctly. Guess it'll help the new-ratters. ?

AyyLmao0o - September 17, 2011, 7:20 pm

Thanks!

I can TeamView you to help you PortForward if you want? Unless you really want to use your VPN, which is fine aswell.

GamersGodly - September 17, 2011, 11:40 pm

Hopefully this will help the newb's. ^_^

Exiled™ - September 17, 2011, 11:51 pm

I didnt see so detailed tut for a looong time ?

Nice work ?

1. Make sure your ports are forwarded.
2. Make sure you updated you No-IP on your DUC.

3. Go into port forwarding, open "CMD" type "ipconfig" and make sure your last 3 digits are the same.

4. Sometime you can't test it on yourself.

Hope that helped.

haxoraxe - September 18, 2011, 3:17 pm

Rephrased - September 18, 2011, 3:38 pm

Why should i use this over cybergate?

?

Kappah - September 18, 2011, 3:46 pm

(Sep 18, 2011 03:38 PM)Swag Daddy Wrote: [\[CITE\]](#) Why should i use this over cybergate?

?

In my opinion, CyberGate looses bots fast, but it's easier to use.

I would use BlackShades even though sometimes the webcam capture doesn't work (At least for me it doesn't work all the time).

BlackShades is also very stable, easy to set up, and sexy GUI.

But another thing I see wrong with BlackShades it, you can't listen to multiple ports, and you have to open two ports to get it to work.

I think you should try CyberGate, if you like it, keep it.

If not, buy BlackShades, and there should be a 2 week warranty on it, that's what Zeon did with me.

BLonging - September 24, 2011, 7:22 pm

Extremely helpful guide for me as I consider my first RAT. Thanks a lot.

Prominent - October 13, 2011, 12:14 pm

Bumping this because it deserves it and it is in the name of the Black Knights.

RattingExpert - October 13, 2011, 12:18 pm

Thanks alot for this! Very nice and detailed :)

Isolate - October 13, 2011, 3:21 pm
