Thread: [\[TUT\] How to setup DarkComet 4.0 \[Fix 1\] \[TUT\]](#)

Phanes - September 8, 2011, 3:16 pm

Hello everyone Unk Tracker here with a tut for setting up DarkComet 4.0 [Fix 1].

EDIT: I added the no-ip part

So we are going straight into DarkComet setting up after we add the no-ip stuff

No-ip:

1) I hope all of you know about no-ip

first you go to the website DNS part click. [here](#)

EDIT: limit 15 images ONLY

2) Now sign up and then login in and it should look a page that has like add new host or manage host. click add new host.Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/singup2.png[/IMG]

3) Now enter the details to your new host and press create host.

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/signup3.png[/IMG]

4) Now time to download the duc client so it can update your no-ip with your IP click. [here](#) to download the client

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/signup4.png[/IMG]

5) Now open install the no-ip duc, open it then enter your login email or username and pass then press select hosts.

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/signup5.png[/IMG]

6) Now it should look like this.

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/signup6.png[/IMG]

DarkComet:

1) Open DarkComet and click on the little cross in the left bottom hand side of the DarkComet and add 1604 port to listen

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/d16cc05c.png[/IMG]

Then you click edit server to start making your server

2) When you are on the first page of the settings it should look like this.

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/2.png[/IMG]

On the Mutex part on first page there is an code and next to it there is an button click it about 5 - 10 times.

You can enter an server id and Profile name if you want too and you can create a password.

3) Click on network settings and enter your no-ip DNS and the port 1604. Click on the tick box and click test network then a green part of bottom should show up if it has green for 2 lines then red it like a little bug that shouldn't happen that much.

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/3.png[/IMG]

4) Now go to Module Startup if you are going to use an crpyter that has a startup option on it you can leave it unticked but if you have a crypter that doesn't then tick it and do it like this

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/4.png[/IMG]

5) Install Message you can use it or not

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/5.png[/IMG]

6) Module shield you can use it but I don't and it all works out fine

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/6.png[/IMG]

7) Keylogger tick the Active offline Keylogger on server startup tick box

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/7.png[/IMG]

8) (I missed out hostfiles on purpose you don't really need it that much if you want to know what it is you can just check on it) Choose Icons you can have no icon or a custom icon (I will show you later on how to add icons that isn't already in that list in another tutorial I will post soon)

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/8.png[/IMG]

9) File Binder use it if you want it will just bind an file with your server so mostly when you open binded server you will get the slave and it will show the file content (sometimes)

Spoiler ([Click to View](#))

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/DarkComet/9.png[/IMG]

10) Build Module this is the last step tick the Disable box for the Pack. (Because it wont work with crypters that good if you tick one of the boxes that ain't Disable)

Then tick the Save profile if you want to save your profile or just leave it and don't save the profile then you press build save your file then your done

Spoiler ([Click to View](#))

[IMG]http://i1114.photobucket.com/albums/k538/luke_court1/DarkComet/12.png[/IMG]

(I didn't save profile)

Server should now be created and in your folder you saved it in

Thank you for reading this tutorial and I hope it will help Alot of people

I will post the new tut for adding new icons to DarkComet soon

As DarkComet supports UPnP you can use this to portfoward

YoutubeMerc - September 8, 2011, 3:18 pm

Thanks for the share I just downloaded and i was wondering what to do..

Joshguitarkid - September 8, 2011, 4:04 pm

i did everything up to the point where i enter my no ip into the box and test nd every time i test the first two are green and the last is red. so all pass except the no ip... what do i do?!

zzGoWR - September 8, 2011, 4:06 pm

(Sep 8, 2011 04:04 PM)Joshguitarkid Wrote: [\[CITE\]](#) i did everything up to the point where i enter my no ip into the box and test nd every time i test the first two are green and the last is red. so all pass except the no ip... what do i do?!

Build it anyways, 9 / 10 times the port checker has shown Failed on the testing on my IP, but it still connected either way.

Phanes - September 8, 2011, 4:10 pm

yep you are totally right zzGoWR

it usually false

Impulse - September 8, 2011, 4:34 pm

B11G thank you to the most helpful most professional ratter ever,,, thank you very very very very much unk you the baws:)

BlackxWaterUSA - September 8, 2011, 4:48 pm

Looks good nice tutorial it will help a lot of people thanks.

zero.xode - September 8, 2011, 4:48 pm

This is a pretty good tutorial! Thanks a lot for adding it!

badlyfar - September 8, 2011, 5:14 pm

Can you edit the pictures? I am just giving advice. You also need to add in the No-IP Part, it's crucial.

Phanes - September 9, 2011, 8:46 am

most people that know rats should know all about the no-ip

I had no-ip before I even used rats and I knew I needed it

prometheus. - September 9, 2011, 1:37 pm

Looks great man, will help many members that need help setting it up!

wales2609 - September 9, 2011, 3:53 pm

Tested it on my self, worked!! Only thing is the passwords did not show up? i logged off facebook and back on and refreshed the list but didnt show up?

Any advice?

Phanes - September 9, 2011, 4:28 pm

DarkComet password thing is annoying
it sometimes bugged and sometimes it works

have you saved your password to your browser?

Wires - September 9, 2011, 4:29 pm

Very nice detailed TuT, Didnt read it all but thanks for this anyway ?

Phanes - September 9, 2011, 4:30 pm

I'm really glad you liked it and it has helped some people out

Ups. - September 10, 2011, 7:06 pm

nice work keep up the work bud vouch...

Racz - September 10, 2011, 7:11 pm

When I listen to the port, it doesnt work.. I havnt portforwarded / done anything like that..

Phanes - September 10, 2011, 7:15 pm

you need to portfoward
that the whole point to making connections work

and if it says like an error another program could be using the same port

Mgt90 - September 12, 2011, 4:50 pm

I still can not get darkcomet to work with my cypter.
Im using Vcrypt. Can someone help please =/ ive been trying for days.

Phanes - September 16, 2011, 11:02 am

That weird 332 views and only 18 replys if I am right anyway thank you for all your replys

ProblemSolva - September 16, 2011, 11:11 am

i tryed it on my local host
i seem to get in the socket
but not in the connections. and yes port 1604 is forwarded
it worked once though. isnt it because the file binder is bugged or the Melt option ?

Phanes - September 16, 2011, 11:16 am

You shouldn't use melt.
did you listen to the port

ProblemSolva - September 16, 2011, 11:19 am

yes listened to the port.
i already tryed also doing it on port 82.

also i dont seem to experience any problems with cybergate.
so i know how to set-it up correctly.
But not DarkComet haha

thanks for the info. im gonna try using it without melt now.

lokito02 - September 16, 2011, 11:22 am

thanks bro nice tutorial :D^^...

ProblemSolva - September 16, 2011, 11:23 am

i dont get it why its not working.
it should be connecting because on my hard drive.
i see in the C:\Windupdt\updater.exe
so it executed the server

Zeromusx - September 16, 2011, 11:29 am

You don't really need DUC since DC4 has a DUC client built in

Phanes - September 16, 2011, 11:29 am

Sometimes when you run it on your self it doesn't work

ProblemSolva - September 16, 2011, 11:32 am

i also tried executing on someones pc
through cybergate. also didnt worked man really strange issue.

Phanes - September 16, 2011, 11:52 am

I think DC really needs to get updated now I guess

jaydeff - September 16, 2011, 3:57 pm

Awesome tut, got me set up perfectly.

BreastMilk - September 16, 2011, 4:12 pm

Wow. This Is A Great Tutorial!!!! Yet Another HQ Tut From The Rats Crew :) gratz.

Phanes - September 16, 2011, 4:34 pm

Cheers I need to think of other rats to make tutorials about

ramesh96 - September 16, 2011, 7:20 pm

hey i have one problem i did everything in here and portforwarded and i tried the rat on me laptop and in the connections tab nothing pops up

CRT - September 16, 2011, 7:21 pm

Great tutorial from a fellow Rat's crew member. Keep up the hard work bro.

Phanes - September 17, 2011, 2:44 am

(Sep 16, 2011 07:20 PM)ramesh96 Wrote: [\[CITE\]](#) hey i have one problem i did everything in here and portforwarded and i tried the rat on me laptop and in the connections tab nothing pops upDid you disable firewall?

Did you try canyouseeme.org?

ahmadludin - September 17, 2011, 4:24 pm

when i was in the network setup and i put in the right info and DNS and when i tested it the first 2 tests were green and the last one was red(unsuccessful)... what is my prob?

Phanes - September 17, 2011, 4:34 pm

(Sep 17, 2011 04:24 PM)ahmadludin Wrote: [\[CITE\]](#) when i was in the network setup and i put in the right info and DNS and when i tested it the first 2 tests were green and the last one was red(unsuccessful)... what is my prob?

it a stupid bug that sometimes happens it should still work

ahmadludin - September 17, 2011, 4:42 pm

oh ok thanks a lot. and when i tried it with my LAN IP everything was green? is that the right one or should i use the DSN opr w/e it is

jinrowolf - September 23, 2011, 6:20 pm

I have set up port forwarding my firewall shows when i go to canyouseeme.org it shows that its trying to access dark comet so I can verify it is working right with the connection. But when i use no-ip the last test fails and it wont connect to it when i make the file with no-ip as the DNS or my external IP. It all works fine in my LAN but when i try to move to WAN or use the no-ip DNS nothing works at all. Any one have any ideas as to what could be going wrong with this? Never mind i think I got it working correctly. :D

dylan624 - September 23, 2011, 10:55 pm

Can someone help me, I run the .exe and get this error.

! Cannot execute

"C:\DOCUME~1\OURS\LOCALS~1\Temp\Rar\$EX18.890\DarkCometv4\DarkComet-RAT\DarkComet.exe"
