well thanks for the link, but right now my internet speed is sitting at 512k (not ideal for streaming video) its sucks ... My ISP cant do anything about it right now since some of their equipment has been damaged and can't get it replaced right away so 512k is about all they cant handle at the moment. The up side is until they get everything fixed I get free internet service yay for living in the boondocks. ? 512k is only good for email and surfing forums, that's about it.
