Thread: [Alliance Worm - The best worm ever sold publicly](#)

Xenotragic - September 15, 2011, 4:01 am

Hello everyone!

So i just got off the phone with my real friend that is a really respected coder and member of Darkode, he made lots of malware that revolutionized the scene and he even found a couple of 0-days.

Anyway he asked me if i could resell this worm for him on hackforums since he doesnt come on here anymore (he started off here, its just troublesome to admit for him since it is a sensitive topic at darkode).

You might have tried other worms at hackforums such as Comune, london and those? Well, so have i.

Anyway i asked him to compile me a bin so i could execute it on my blackshades slaves, it was like 40-50 at the time.. and the result fucking amazed me, take a look.

[\[IMG\]http://img842.imageshack.us/img842/1095/threadscreen.png\[/IMG\]](http://img842.imageshack.us/img842/1095/threadscreen.png)

So i basically skyrocketed to 300 and after 3-4 hours i'm at 472. Needless to say it's effective.

I asked him how his worm could do this when other worms can't do shit, he told me it uses perfect MSN/ICQ/Pidgin/Facebook/Yahoo/Myspace spreaders, so he basically urlshortened my link, wrote something like "Hey bud, check my new dog out" copies in my link and made it spread.

But that did not explain how i got about 250 installs INSTANTLY, did it? No.. so i figured it was the LAN-spread, and it sure was.. he told me it uses some wide lan spread which means that every computer that is using a wireless network in the area of the infected computer is going to get infected if it has the router has the vulnerabilities this worm is exploiting.

Needless to say i told him i could resell it on hackforums but he wants me to charge 500\$ a piece since that is pretty standard on darkode, but i told him that would never fly here since kids just don't have that kind of money.

So what we have here is basically a worm coded in c++ that uses IM/MSN/ICQ/Pidgin/Facebook/Yahoo/Myspace spreaders that is coded to actually work and a lanspread that is out of this world.

What would you charge in my situation?

GamersGodly - September 15, 2011, 4:03 am

personally, i'd like to see this in action before i could give a price.

feel free to just pm me and ill take a look.

DaL33T - September 15, 2011, 4:31 am

I can suggest a price if you have something to give me to test.

I can post a detailed review.

Xenotragic - September 15, 2011, 4:33 am

Nevermind, i was just told i can't sell it under 150\$, wich means i won't sell it on hackforums since noone would be able to afford it.

Since i'm not a paid member i can't close the thread, but if some moderator is able to.. please do!
Thanks everyone!

? Lollipop ? - September 15, 2011, 4:33 am

@OP I think you just got lucky with some computers that had loads on the LAN connections.
