~ Admin Page Finder probbably the best on Internet ~

Hello Hackforums! I have just released a admin page finder program, for more info look down.

Info: This is excellent admin page finder, probably the best on internet because it have the biggest dork list wich use to find admin page. It is bigger then havij, other programs, online scanners or perl scripts. The program was coded as a my gift to Hakeforums.net community. Edit: I removed the login application it is opened for all. I hope you will enjoy it !

Dimitrije

- Big dork list so there are big chances in finding your admin page if exist
- Very fast, you can set threads and timeout too
- Status-bar added
- Minimize to system tray
- Login system

Logging in to 'Hak Forums'... lolscam?

Dimitrije - September 17, 2011, 9:06 am

Yes to a my forum "Hak Forums" the forum scripts force words to recorrect Like instead SH you write spam ! I posted the virus scan and video proof ! It is not a scam ! I used that program in my thread [\[Service\] Admin Page Finder \[FREE\]](#)

And I released program for free because too many people asked me for it !

And I am HQ member never scammed anyone....

Zeppination - September 17, 2011, 9:12 am

Dl'ing now :) Im gonna try this on a fair few sites. Mind telling me how you made this?

Dimitrije - September 17, 2011, 9:13 am

Try it ! If website have admin page program will find it 100%. I coded it in VB.NET.

Dr_RoX - September 17, 2011, 9:29 am

Thank you ,Im gonna try this , Great Djob

Dimitrije - September 17, 2011, 9:31 am

Thank you on comment, please give feedback ;)

zer0day - September 17, 2011, 10:05 am

I was intrigued until I seen the log in system. I don't want to log in every time I need to use a simple tool. Hopefully you will make the next version without log in. Thanks for sharing though and it looks nice.

Teenage Anarchist - September 17, 2011, 10:18 am

Amazing program dude but i dont like the logging stuff

Yea not sold on the whole, login idea, seems like a ploy to just get hits on your site.
If you make a version that does not require Dox I will use it.
If not my scrip is working just fine.

Regards,

Pr0x_X3n0 - September 17, 2011, 11:56 am

Quote:Euhmm... i got the admin page yes. but now i need to login so whats the actually point? what can you do with it?

Its just a tool to find the admin login page thats all.
For passwords and usernames you need to actually hack the site :P
Read up on SQLI, that will get you what you seek.

Regards,

Bamarah - September 17, 2011, 12:49 pm

marra_x10 - September 17, 2011, 3:51 pm

Thanks for this mate it will be really helpful i have just started to learn about sqli and i was at the point where i need to find the admin page, great timing..?

Dimitrije - September 18, 2011, 2:04 am

Thank you so much for your comments people ! Because of you I will continue to code and replease my programs. I knew that this admin page finder will be successful because of its high efficiency. Perhaps some still do not see that But those who need it will always use it. As for the Login System because some people complained about it, it is used to get my forum members, yes it is true. And you people don't complain on program when flamingw0rm release his Spam Downloader with the same login system !!! Is that only because I am not Ub3r/L33t/h4x/.. So I really think now why should I release my SMS Sender.

Best regards Dimitrije

Teenage Anarchist - September 18, 2011, 2:23 am

Update:

Awesome program tested it out just register at his website and you will find almost every admin login from now on!

Great Job Dimitrije keep it up!

p.s: will we see some updates on this program?

ISmith - September 18, 2011, 2:47 am

When I entering my username and password it keep saying invalid account .. Does anyone have the same problem?

Dimitrije - September 18, 2011, 2:53 am

No you must have "Hak Fourms.net" account, click when you open program click Register button then make a new account!

Nevius will just send you a Keylogger.

Anyway, I tried it and didn't get the admin page of 2 sites.

But anyway, thanks anyway for it having lots of admin paths.

Dimitrije - September 19, 2011, 1:41 am

If website have admin page the program it will find it 100%, not all websites have admin page.

Hmm that is very strange, did you try to run it again. Did you add slash / after the link, did you forget http:// did you set too much threads. Did you use proper username/password, if not then click on "Register button" Also this program require Net Framework 2.0 installed. If you still have these problem please pm me with screenshot.

Sorry man but I must tell you this. You are really noob. How you wan't to find deface website if you don't find admin page. And this is very very good admin page finder. This program doesn't hack website for you, only finding admin page, For admin info use SQL injection, XSS, etc..

You said you can use it to deface a website, well you can't. All it does is find the admin page, it doesn't tell you the login, so without the login, you can't deface the website. So this does make the program useless.

yeah buddy some people are true idiots ?

DeafCon - September 20, 2011, 1:55 pm

Tested this and the success rate is very good but just a few annoying things with it. Firstly when it does find an admin link it appears as a link in the program but when you click on it it does not open up your default web browser and takes you there, that might be a nice feature. I realize this might also be a security measure but at least an option to copy and paste the link would be nice. Second if you decide to stop trying to find the admin panel on for a certain site and try another site it does not start at "0" rather it starts at where it left off. Thirdly it would be nice for the program to remember log in details so we don't have to keep typing out every-time. The program as a whole is great but are any updates planned?

At 2:25 in the video, you said, "Happy defacing !"

So yeah, you pretty said that you can use this to deface websites right there. So, don't say that you didn't say that you can use this to deface websites.

Dimitrije - September 20, 2011, 11:34 pm

@TheSickSign thanks for feedback, will work for v2. And yes I said happy defaceing cuz I mean when you find admin page then happy defaceing, ofcourse that you will have to find admin username/pw. And everybody who is looking for this program are here because they are going to deface some website and they need this program. Cuz you can't deface without admin page. Pretty simple...

It works but you don't know how to use it. YOu must enter Http:// before website and the slash / after

example: <http://somewebsite.com/>

No, the program require account on Code www.Hak forums.net (remove the space). Or when you open program click register button and it will navigate you to register page on my forum. That's why I put login system, like flamingw0rm did on his spam downloader. Program is completely clean.

My program is not backdoored!!!

You can scan it but I already posted virustotal scan. Where did you get that ?

If you don't have any information GTFO my thread.

It is an old project for other forum I do not work there anymore.

Dimitrije - April 13, 2013, 3:30 am

UPDATE: I REMOVED THE LOG IN APPLICATION, PROGRAM WORKS NOW.

Hydronix - April 13, 2013, 4:13 am

I'd advertise another one that doesn't require a log-in but that will probably violate the rules. Well all in all it works so well done :), don't see a lot of these out there anyways.

Bavn - April 13, 2013, 4:13 am

Looking good, good luck with it

??

There was one forum for crackers and someone cracked my program (i didn't protect it) and posted it on that forum. I saw that, registered and asked admin to remove thread. He banned me, now they don't have forum anymore :)

Well I am planing some updates. Expanding dork list, graphic updates... Any suggestions?

mrhogie - April 19, 2013, 5:21 pm

can i get this please, thanks alot in advance

Sertroph - April 19, 2013, 5:34 pm

tested this out, worked for me. thanks for the tool. It did find one page twice, but that's better than not finding it at all. (wp-login.php)

As a suggestion for an update, add html redirection support: user types in example.com in the browser, and is redirected to example.com/website/. user types in example.com into program, and spends 5 minutes waiting for it to tell him it didn't work.

also, you might want to fix the 'hackorums' title error.
