Thread: [\[TUT\] How to setup Cerberus Rat 1.03.5 Beta \[TUT\]](#)

Phanes - September 18, 2011, 6:54 am

Ok this is my last tut in this section because when I make new rat tut it will be in the hacking tutorial section.

What you will need:

[No-Ip](#)

[No-Ip client](#)

[Cerberus Rat 1.03.5 Beta](#)

[7-zip](#) or [WinWar](#)

No-Ip:

Spoiler ([Click to View](#))

1) I hope all of you know about no-ip

first you go to the website DNS part (I linked you to it in the beginning)

2) Now sign up and then login in and it should look a page that has like add new host or manage host. click add new host.

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/singup2.png[/IMG]

3) Now enter the details to your new host and press create host.

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/signup3.png[/IMG]

4) Now time to download the duc client so it can update your no-ip with your IP (also at beginning of the tutorial)

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/signup4.png[/IMG]

5) Now open install the no-ip duc, open it then enter your login email or username and pass then press select hosts.

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/No-ip/signup5.png[/IMG]

Cerberus Rat 1.03.5 Beta:

Spoiler ([Click to View](#))

1) Download and unzip Cerberus Rat 1.03.5 Beta and then run the exe.

2) Go to options then enter the port like 5150 0 0 and the password you want Then click save.(Don't have screenshot)

3 Now press New delete the old ip and then enter your no-ip, The password you put in on the second step and the port you put in.

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot14.jpg[/IMG]

4) Now go to Server Installation and mostly do what I did but you can change it abit.

[IMG]http://i11114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot4.jpg[/IMG]

5) Now go to Boot Methods you can click all the check box's if you want you can enter the run key

names and for the active setup press the + for about 5 - 10 times.

[IMG]http://i1114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot5.jpg[/IMG]

6) Go to add file tab (If I am right it should be a binder you don't need to do it but if you do have fun)

[IMG]http://i1114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot6.jpg[/IMG]

7) Go to the Anti Debugging tab and you can click all the click box's if you want to (up to you)

[IMG]http://i1114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot7.jpg[/IMG]

8) Now go to misc options and Do what I mostly did but if you want to make the keylogger active you can. You can change the Mutex name.

[IMG]http://i1114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot9.jpg[/IMG]

9) Go to Display message you can do that If you want to but they will probably know if you put a stupid message that you infected them.

[IMG]http://i1114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot10.jpg[/IMG]

10) Go to Black List thing (I don't really know it) but you can skip it

[IMG]http://i1114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot11.jpg[/IMG]

11) Go to overview tab it will just tell you some details about server (Don't have screenshot)

12) Go to Create Server tab. Now if you want to test the server on you. use the visible mode option but if you are going to give it to other people don't use it. You can compact it after you done that just press Create server and put it in any folder. Even if you put the file in any folder the real Server will be in the Cerberus Rat 1.03.5 Beta folder.

[IMG]http://i1114.photobucket.com/albums/k538/luke_court1/Cerberus/screenshot13.jpg[/IMG]

You have now setup the server for Cerberus Rat 1.03.5 Beta, Just spread and have fun with slaves now. I used a big size so it is more easy to read

Ariana Grande - September 18, 2011, 6:58 am

Nice high quality tutorial, I hope it benefits some members around here.

devilpsn - September 18, 2011, 7:00 am

Good TUT Mate, keep it up! ?

Will help.

Black Shadow - September 18, 2011, 7:06 am

Nice tut but you could have made the font medium instead of x large ?

Phanes - September 18, 2011, 7:08 am

(Sep 18, 2011 07:06 AM)Black Shadow Wrote: [\[CITE\]](#) Nice tut but you could have made the font medium instead of x large ?

I know a kinda blind person on HF so if I make it x-large they can see it better

CRT - September 18, 2011, 7:14 am

Another very indepth HQ tutorial. Damn, keep up the hard work man!

El_lobo - September 18, 2011, 7:17 am

Thanks for that, is really helpful.. bookmarked

Keep it up

BlackxWaterUSA - September 18, 2011, 11:44 am

Nice TuT keep up the good work, will help the noobs.

Phanes - September 18, 2011, 2:33 pm

Cheers bio and other people for positive comments.

berzerk - September 20, 2011, 2:46 am

Great tut, thanks for taking your time....

gaizine - September 20, 2011, 4:10 am

Nice tutorial...i did everything as you said...but do i have to port forward it..im using an ADSL2+/Router..i sent it to one of my friend..usind mediafire,but when he got it he said it was a text file,n i could not get him on my connections...please help me out..im a newbie to this site,if i have posted this in the wrong forum,please forgive me..

Phanes - September 20, 2011, 7:45 am

First you really do need to portforward :P

and maybe you put the wrong file on it?

v0nh4ck3r - September 20, 2011, 8:32 am

Thank you for your tut.... GREAT tut~!@@@

Prestin32k - September 20, 2011, 10:26 am

Very nice detailed tutorial, thanks gonna try this later on.

Phanes - September 20, 2011, 10:26 am

I'm glad that everyone found this helpful. If you got any problems just PM me

Jackson Teller - October 24, 2011, 2:19 pm

Been lookin for this for a while, Thanks.

Hacking1955 - October 24, 2011, 2:59 pm

thanks man, i hope it works for me

d4rkm4n - February 21, 2012, 8:15 am

Thanks for this tutorials.

Btw, what make this RAT better than others?

=)

v0ise - February 21, 2012, 9:41 pm

For some reason when I create the server it one, doesn't let me open it cause I'm not the owner of the program? Or something like that. Also, after an "x" amount of minutes the server.exe deletes itself! I followed your tut completely but am having this issue. Any suggestions? 0_0

[EDIT] nvm, got it to work :D. My next question is, how can one create this RAT to hide from task

manager? Is this something that can only be done via a crypter?

sadfacehacker - February 26, 2012, 3:48 pm

Every time i try to extract it or open the application, it doesn't respond and then it just closes. What can i do to fix this?

What does this mean?

<https://imgur.com/25B93>

HTShadow - February 28, 2012, 8:44 am

Worked well for setting up my first Cybergate server

mafkees122 - February 28, 2012, 8:59 am

Great tutorial, thanks for this one :)

juulzday - August 26, 2012, 2:14 pm

if i infect someone i dont see him in Ceberus.. do you must portforward?

Qauzh - September 1, 2012, 4:09 pm

can someone give me a download link for cerberus much appreciated <3

somerandomguy323 - September 5, 2012, 10:09 pm

Thanks for the tutorial but how do i connect to someones machine now?

qpalm - December 13, 2012, 4:17 pm

i'm getting a similar error.. don't know what it is. i've tried deleting all the files, reinstalling, and trying it again, step for step, to no avail

ThatDude91 - June 17, 2013, 7:35 pm

im new to this i just downloaded the file but the cerberus.exe file wont open

can anyone help

Virtual-Echo - November 15, 2013, 2:51 am

New link please, this one is bugged for the RAT

RealHackingurwifi - November 15, 2013, 4:54 am

(Aug 26, 2012 02:14 PM)juulzday Wrote: [\[CITE\]](#) if i infect someone i dont see him in Ceberus.. do you must portforward?

Yes you have to portfoward. But good guide will help some new people out

Staufenberg - November 15, 2013, 8:20 am

Thanks for this. Very nice tutorial

mafiaanonymous - November 15, 2013, 3:03 pm

Good nice very man :) working Thank you :)

praetorian70 - November 16, 2013, 4:54 pm

Very nice tutorial, thank you for sharing this.

abuseteam1 - January 13, 2014, 1:22 am

Hello, Please I will need ur help. I am new. How do I know the cerberus is running on a pc? How do I get confirmation?

yawaka - January 13, 2014, 5:42 am

wow nice tutorial man i love it really :D

Watch Dogs™ - January 13, 2014, 9:39 am

damn good bookmarked this thread will help me a lot thanks brother :D

The_Unnamed - January 14, 2014, 10:32 am

Thank you so much for this, helped me alot

parkerbrahhh - January 15, 2014, 6:59 am

Thanks very helpful great for beginners too

banc1234 - January 15, 2014, 11:24 am

no rat to download sorry :) longer than you :()

Honx_jock - February 19, 2014, 12:11 pm

need help cant connect to the rat, can someone help me with portforwarding it doesnt seem to work

Zakavoyna - February 24, 2017, 5:05 pm

Hey how do I "spread and have fun with slaves now"

P.S Nice TUT, i'm sort of a newbie.?

Maschil_Crane - February 27, 2017, 10:57 am

Thanks bro. Your work is appreciated.

Hopsin - March 1, 2017, 2:13 am

(Feb 27, 2017 11:57 AM)Maschil_Crane Wrote: [\[CITE\]](#) Thanks bro. Your work is appreciated.
No-IP is no longer recommended for RATs and this thread is very old.

Wayachi - March 1, 2017, 6:41 am

Awesome tut! Keep up the good work

CryptoLayer - March 16, 2017, 11:21 am

I hope that will work , can still try it tho

evolving61 - March 16, 2017, 4:40 pm

cheers for the awesome threat!

Mimri - March 17, 2017, 8:24 am

Thanks for the tutorial I will try this out soon.

gaidenukstiskrv - March 28, 2017, 3:42 am

Does it still work? I'm new to RATs and dont wanna spend \$\$ on any yet, just wanna gain experience with these one first. Anyone can vouch for it?
