Thread: [\[sell\] Java Download & Execute - ALL BROWSERS!](#)

goblert - *October 30, 2009, 12:17 am*

-----Java Download & Execute-----

.: Supported OS :.

This works on ALL version of windows from XP up.

.: Supported Broswers :.

Tested on the following broswers:

IE 6,7,8

FF 3.5.4

Opera 10.01 build -> 1844

Chrome 3.0.195.27

.: About :.

First of all i am aware this source code is available on various sites. However i am selling the service of setting it all up working and ready to upload to your host.

.: How It Works :.

The visitor will go to the site where they will be prompted by a java certificate, if the user clicks run the payload file will be downloaded and executed silently. I have found that most people click Run without even bothering to read the alert, It has proven to be very effective.

.: What Do I Get? :.

You get all files ready to upload to your host, working and signed correctly.

The applet does not require any further configuration simply upload the files and your good to go.

I will also sell ALL netbeans project files with source, signing tutorials and all guides on how to create your own new applets. This is an advantage because you can make a new applet or change payload URL whenever you like.

.: Payment & Pricing :.

Single package - WMZ - \$50USD

Single package - Western Union - \$50USD

Complete Project Package With All Guides - WMZ - \$90USD

Complete Project Package With All Guides - Western Union - \$90USD

.: Contact :.

MSN => goblert [at] hotmail.com

.: Live Demo :.

If you are interested in buying and would like to see a live demo of the applet working please PM me. Serious people only please.

Regards ?

iDarky - October 30, 2009, 12:28 am

N!CE 1 post...not many people are going to believe you.

r34p3r - October 30, 2009, 12:44 am

Sounds very good, it is just what I was asking a guy on here who has made a tut on how to do it all. I wanted someone to set it up for me also... its a little pricey for me at the moment tho Im afraid. Im sure once someone gives you a chance you will have no trouble getting some nice feedback here and some happy customers. Great idea :)

D3N - October 30, 2009, 6:11 am

It's free lol. I don't see why you are selling SETUP for 90\$. Ripoff much?

<https://hackforums.net/showthread.php?tid=172874>

If you want a java applet that does CODE EXECUTION (download + whatever else you want, like format) on linux, mac or windows you can buy mine.

<https://hackforums.net/showthread.php?tid=172394>

goblert - October 30, 2009, 8:31 pm

ive sold this on unknOwn forums to many people.
nice thread jack. stick to your own and don't come to mine trying to advertise. kthnx.

MyNameIs940 - October 30, 2009, 8:33 pm

many people*

Nice grammar much.

bytesize - October 30, 2009, 8:35 pm

I have a 0day java sploit that runs the applet without asking permission. \$150 USD

?

Kewlhotrod - October 30, 2009, 8:37 pm

Yeah. This kid is a real douche, and I pointed this out to him on uNk.

Try speaking to him and he'll treat you like shit.

Now you're in my territory, kid. Get lost.

And just to best him, if anyone wants this set up and can't find it, I'll do the EXTREMELY EASY job of doing it for you for only \$10. Signed and everything.

Don't mess with this kid, simply a kid who wants to exploit a very easy task for money, and treat potential customers like shit.

When op got butthurt when I said I didn't like his shit, he decided to spam my hotmail inbox with my own mailing address, Lol.

Some images as proof. I don't have what I wrote on uNk about it because some mod came and picked it out.

[IMG]http://i34.[censored].com/2czwr28.gif[/IMG]

[IMG]http://i37.[censored].com/mwcmq0.gif[/IMG]

It's amazing he was actually able to spell, "Fool." correctly.

goblert - October 30, 2009, 8:43 pm

lol

having a whinge cause i said "what do you want?"
no one cares...

Kewlhotrod - October 30, 2009, 8:45 pm

Great double post and blowing off my entire statement.

Oh well. Lol. Should have figured.

R1chard™ - October 30, 2009, 8:45 pm

OP is epic noob. It also works on Linux... and basically ANY OS. What OS doesn't support java? Lol

goblert - October 30, 2009, 8:49 pm

it was like a year ago. let it go....
your just a whinger. no one cares
why you think mod deleted your whinge
post on unk.

D3N - October 31, 2009, 12:45 am

(Oct 30, 2009 08:45 PM)R1chard™ Wrote: [\[CITE\]](#) OP is epic noob. It also works on Linux... and basically ANY OS. What OS doesn't support java? Lol

Not really, I haven't seen a single one that worked on all apart from mine. Either way it doesn't matter because the OP is a script kiddie, is incapable of rewriting the code so it does support multiple OS, and does nothing but sell public stuff.

Lol.

Kewlhotrod - October 31, 2009, 12:54 am

It's funny this guy is getting called a skiddy on the most skiddy Hacking related forum there is... No offense HF.

That's really saying something.

Selling something that can be done in 5-10 minutes with extreme easy for 80 fucking dollars?

You're insane, kid.

Cloak - October 31, 2009, 1:15 am

50\$? You could buy the same from D3N for 10\$. And his is WAY better than this public noob source.

Also this is detected by around 5 AV's. Many of my victims complained about AV picking it up. I am going to buy D3N's now.

The one you have took me like no time to make. Here's the source:

<http://milw0rm.com/papers/262>

Good luck selling.

goblert - November 1, 2009, 5:06 pm

How would you know mate you havn't seen the one i got. It FUD and i modified public (non milw0rm).

And thanks for the luck lol.

[TDB] wolfeater - November 1, 2009, 5:11 pm

lolnoob. nobodies going to buy setup for free code for \$50

Dead Account #355 - November 1, 2009, 7:09 pm

lol what a fool and a asshole.

bytesize - November 1, 2009, 7:14 pm

This is public code..
