Thread: [Ideas for an application...? I don't have anymore ideas:\(](#)

Chuck Norris - September 25, 2011, 4:14 am

Well... what kind of application do you want to be created by me?
I am really bored in the last time and need something nice to create...

Ideas are appreciated:)

Thanks <3

Penthos - September 25, 2011, 4:18 am

Just an idea but what about a joke app??

Something we can use to mess with our friends, slaves etc.

Maybe it should have a built in downloader to the target, so we can just click and prank :P

Hahaha, would love to see something like this ^.^

Meh. It has quite a bit. =P

banthex - September 25, 2011, 4:46 am

Please programm something like [this](#).

I love this sheep. ?

You could code a animated Minecraft guy walking around on the desktop and mining some stuff or building things. xD

Washi - September 25, 2011, 5:23 am

Do you know [Achtung die Kurve?](#)

You can do something like that

DragonHunter - September 25, 2011, 5:25 am

create a game in XNA, It's fun while testing it and ur making ur own game to have fun
Atm I'm re-creating a game called Dungeon Keepers, It's a old game but really awesome

HaXoR- - September 25, 2011, 6:15 am

I'll ask you to make a codedom crypter which gives 99% unique output.

Regards,
HaXoR-

Azido - September 25, 2011, 6:15 am

Make a facebook page liker and release it to me.

Well, i could generate 50MB of junk code and each output would be 99% different <3

Xirian - September 25, 2011, 6:17 am

Make a RAT if you're good enough. If not, then learn more until you can make one. ?

I wouldn't. I'd review it and possibly use it for a bit and see if I like it.

Support . - September 25, 2011, 6:52 am

Make something you can sell. Like the most bought program on HF but similiar, at least then your making money if your still bored by it.

FileX - September 25, 2011, 7:01 am

Why everybody wants to code shitty blackhat programs.. There are enough Crypters, RATs and Keyloggers on the market, no need for more.

Maybe you could try and make a game in XNA?
